

Camcorder Format Guide

Hi-8: Records analog video, 400 lines of horizontal resolution, onto an 8mm or Hi-8 cassette which looks similar in size to a standard audio cassette.

Digital-8: Records 500 lines of horizontal resolution digitally onto an 8mm or Hi-8 cassette, a Sony conduit for its large 8/Hi-8mm clientele.

Flash Media: Flash Media memory cards store electronic data on a small card, some no bigger than a stamp. They store video, photos, music, and more. In video camcorders the most popular cards used are SD (Secure Digital), SD-mini, MMC (Multi-Media Card), and Memory Stick Duo/Pro. Flash media memory cards have no moving parts, and are less prone to movement damage.

DVD: This consumer format records directly on 3" (8cm) DVD media. Convenient easy playback on most current home DVD players and computer DVD drives. The DVD discs have 3 types; DVD-R (write-once) or -RW (re-writable), DVD+R or +RW and DVD-RAM. The DVD minus series requires you to initialize (format) the disc prior to recording, and finalizing the disc after all the information you want has been recorded on that specific -R disc. Both are accomplished within the camcorder in order to play back on your DVD player. DVD plus and DVD-RAM do not require disc finalization. The DVD minus and plus both record in a linear fashion, while DVD-RAM records random access like a computer hard drive.

AVCHD A new format for High Definition 1080i and 720P video signal recording onto tapeless media such as 3" (8cm) DVD's or Hard Disk Drive (HDD) camcorders. It uses the MPEG4 AVC/H.264 codec compression, up to 15 Megabits per second. Presently AVCHD is considered significantly higher quality compared to current standard definition DV camcorders, but considered lower than the HDV format.

AVCHD DVD: Record High Definition 1080i video signals onto DVDs directly from the camcorder using 3" (8cm) DVD media. DVD-R/-RW/+RW and +R DL (Dual Layer) media formats. The AVCHD DVD high-definition recorded discs can only playback on the Blu-Ray DVD desktop players or your computer DVD drive.

AVCHD HDD: Record High Definition 1080i video signals onto the camcorder built-in hard disk drive (HDD). Easily back up your recorded video onto your PC's hard drive (using software) for viewing, editing, and archiving purposes.

DV/MiniDV: The DV format records a remarkable 500 lines of horizontal resolution video digitally onto Standard and Mini-DV size magnetic tape. It has since become one of the standards for consumer and semi-professional video production. It features intra-frame compression for uncomplicated editing and the digital interface port known as FireWire, IEEE 1394 or i-Link, found on the camcorders and VTR's, allowing you to transfer your recordings digitally without signal loss to another DV device or computer non-linear editing systems.

HDV High Definition Video recording format on the DV and MiniDV magnetic tapes. Various HDV camcorders offer HD recording in 1280x720p or 1980x1080i resolutions, using 4:2:0 color sampling. It uses MPEG-2 video compression, a highly compressed video signal with MPEG-1 audio compression (16-bit stereo).

DVCam: A Sony professional DV variant format that uses the same metal evaporated tape of the DV format, but has a higher-quality tape recording manufacturing process. DVCAM records a wider 15 micron band-width, which is considered the step-up format from the consumer DV tape with 10 Micron. The tape is more robust to meet more aggressive use in editing.

AVCHD is a relatively new-on-the-scene, high-definition MPEG4 format that is found on many DVD, hard disc drive, and flash memory camcorders. While the standard-definition DVD camcorders offer friendly recording with easy playback in home DVD players, the AVCHD high-definition DVD disc recordings require a "Blu-ray" high-definition DVD player or a computer DVD

drive with appropriate software for playback. You can enjoy your AVCHD high-definition DVD camcorder recordings when your camcorder is connected directly to your high-definition monitor. The AVCHD DVD format is a high-definition format. AVCHD DVD camcorders do not record "Blu-ray" or "HD-DVD."

SONY HDR-UX5 **AVCHD**

High-Definition DVD Camcorder

- Records AVCHD 1080i High-Definition Resolution onto 3" DVD±R, DVD±RW, DVD+R-DL (Dual Layer) Discs
- 1/3 CleadVid, 2.1 Megapixel CMOS Sensor
- Carl Zeiss Vario-Sonnar T Lens
- 10x Optical, 80x Digital Zoom
- Super Steadyshot Electronic Stabilization
- Memory Stick Duo/PRO Slot (up to 4 GB)
- Smooth Slow Recording Mode-Slowly View & Analyze • HDMI Output

\$899.95

Panasonic HDC-SX5 **AVCHD**

3 CCD High-Definition DVD Camcorder

Record Full High-Definition 1920x1080 (MPEG4) Resolution, or MPEG2 Standard-Definition onto DVD-R/-RW/-R DL/ DVD-RAM Discs, or SD/SDHC Memory Cards.

- Transfer SD Card to DVD Imagery In-Camera
- Advanced Optical Image Stabilization
- 3 1/6" Image Sensors
- "Pre-Rec" Mode Records Footage 3 secs Before the Record Button is Engaged
- Leica Dicomar 10x Optical, 700x Digital Zoom
- Crystal HD Image Processor Engine
- HD Focus Assist
- Composition Guide Lines
- 2.7" Wide LCD
- External Microphone Input
- HDMI & USB 2.0 Connectivity

#PAHDCSX5

\$799.95

Canon HR10 **AVCHD**

High-Definition DVD Camcorder

The HR10 captures 1920x1080 high-definition video through its genuine canon HD 10x optical, 200x digital zoom Lens. It records true 1080i high-definition resolution onto 3 DVD-R/-RW/-R DL discs. At the heart of the HR10 is a 1/2.7" CMOS sensor with a built-in RGB Primary Color Filter that separates light into red, green, and blue color components. In addition, the HD signal is enhanced by Canon's exclusive DIGIC DV II image processor. Your HD imagery will be on-target, fast and accurate with the camera's advanced AF Focusing System.

- SuperRange Optical Image Stabilization
- 24p Cinema "film-look" Frame Rate Mode
- 2.7" Wide LCD with 211k Pixels
- miniSD Memory Card Slot • HDMI Interface

#CAHR10

\$999.95

HITACHI DZ-BD7H **Blu-ray Disc**

Blu-ray High-Definition DVD & HDD Camcorder

The DZ-BD7H Hybrid Camcorder incorporates a Blu-ray drive and a 30GB built-in hard disc drive (HDD). The HDD can record approximately 4 hours of 1920x1080 full high-definition video, or up to eight hours of 1440x1080 high-definition video. It can also copy the contents from HDD to 3" Blu-ray discs within the camcorder. This is done in-camera, and users do not need to use any external devices.

#HIDZBD7H

\$1,299.95

HITACHI DZ-BD70 **Blu-ray Disc**

Blu-ray High-Definition DVD Camcorder

The new DZ-BD70 is a Blue-ray single drive camcorder which can record approximately one hour of 1920x1080 full high-definition video (two hours of 1440x1080 high-definition video) on a 3" Blu-ray Disc.

With the camera's newly developed full high-definition lens, 5.3 mega pixel progressive CMOS image sensor, and "Picture Master Full HD" full high-definition signal processor the DZ-BD70, throughout its whole image processing, captures, records and stores 1920x1080 full high-definition video to a Blu-ray disc.

#HIDZBD70

Flash Media Camcorders Explained

Flash Media memory cards store electronic data on a small card, some no bigger than postage stamps. They store video, photos, music, and more. In video camcorders the most popular cards used are SD (Secure Digital), SDHC (High-capacity), and Memory Stick

Duo/Pro. Sony consumer camcorders use the Memory Stick Duo/Pro, while the other camcorder manufacturers use SD (Secure Digital). Flash media memory cards have no moving parts, and are less prone to movement damage.

Panasonic SDR-S10

3 CCD Media Camcorder

- 3 1/4" Image Sensors with 680k Pixels • Records to SD/SDHC Cards
- 2GB SD Card Included • Water-Resistant Casing • Shock-Resistant Mechanisms

PAL Camcorder Explained

Camcorders that are known as "PAL" Camcorders play back their video in countries that support the PAL color system, such as Europe, China, the Middle East, and South Africa. Camcorders can record anywhere in the world. It matters where you plan to watch your footage. Camcorders that record PAL system Do Not play back on American television. In the United States, our TV color system is known as "NTSC." Around the globe there are various

"Television Standards." These standards are known as NTSC, PAL, and SECAM, with variations such as PAL-B, PAL-I (United Kingdom), SECAM-D (China), and SECAM-L (France). The North American NTSC television standard uses 525 scan lines with 30-frame/60-fields per second, while PAL uses 625 scan lines with 25-frame/50-fields per second rate. There are no multi-standard camcorders. Camcorders are either NTSC or PAL.

impact Video Conversion Lenses

Impact high-quality convertible lenses are manufactured with premium workmanship, resulting in superior, high-resolution image capture. The lenses are available in several categories: Tele-photo, Wide-angle, Macro/Close-Up, and Fish-Eye conversion lenses. They mount directly to digital and video camcorders. Impact lenses with the magnetic base mount magnetically and directly onto a digital-camera or camcorder.
