■ OPERATION GUIDE

Master can double the power by connecting the two power stations with an additional parallel connection box .

Plug the DC ports of the parallel box separately into the two same power stations to expand the power watts.

NOTICES:

The red part of the DC plug is positive, and the black part is negative.

Please connect the positive to positive and the negative to negative to ensure using correctly.

Please connect the parallel cable first, then press the AC output button to activate the parallel function.

The total output watts are separately displayed in the LCD of power station.

UPS WOULD NOT be functional when paralleling two power stations.

Please parallel two same power station with the provided parallel box.
