Subject: *MVM250A, MVM450A, MVA50A*

Introducing the newest additions to our line of fluid monopods and accessories!

The MVM250A is a fully functional fluid video monopod featuring the MVA50A base; which can now be purchased separately as well! Also available is a new MVM450A which features the monopod and MHXPRO-2W video head.

Key Benefits and Features:

- ✓ **Patented System:**
Features the patented fluid cartridge system incorporated into the base that gives an incredibly smooth panning action to the monopod while shooting video.
- ✓ **Portability:**
Great solution for those users who are looking for a compact and light weight support for the camera. It can be easily carried around and in those situations where the use of a tripod is not possible because of the lack of space.
- ✓ **Operating Height:**
Great operating height which allows the user to be more flexible while shooting and reach points of view that otherwise wouldn't be achievable. Whether shooting at eye level or overhead you always have a smooth pan in a very limited footprint.
- ✓ **Fluid Base:**
The fluid base accessory will convert a photo monopod into a fully functional and video monopod. Compatible with Manfrotto models; 679B, 680B, 558B, and all the photo monopods that feature a 20mm tube in the last section.
