

**Cyclop:** (Greek: "Round Eye") in Greek legend and literature, any of several one-eyed giants to whom were ascribed a variety of histories and deeds.

## Useful Notes

-About CV IN/OUT: When nothing is connected to the CV IN jack, the CV OUT jack will output 0-5V, depending on the attenuation and the expression pedal amount. When you send a CV to the CV IN, the CV OUT will be attenuated from the expression pedal.

-INPUT attenuation and OUTPUT GAIN. For a unity gain result, set OUT at 0% and IN at 100%. This controls are very useful to drive high gain lines.
