[Installation](#)

In the box

- One large panel

- Two small panels

Unpacking

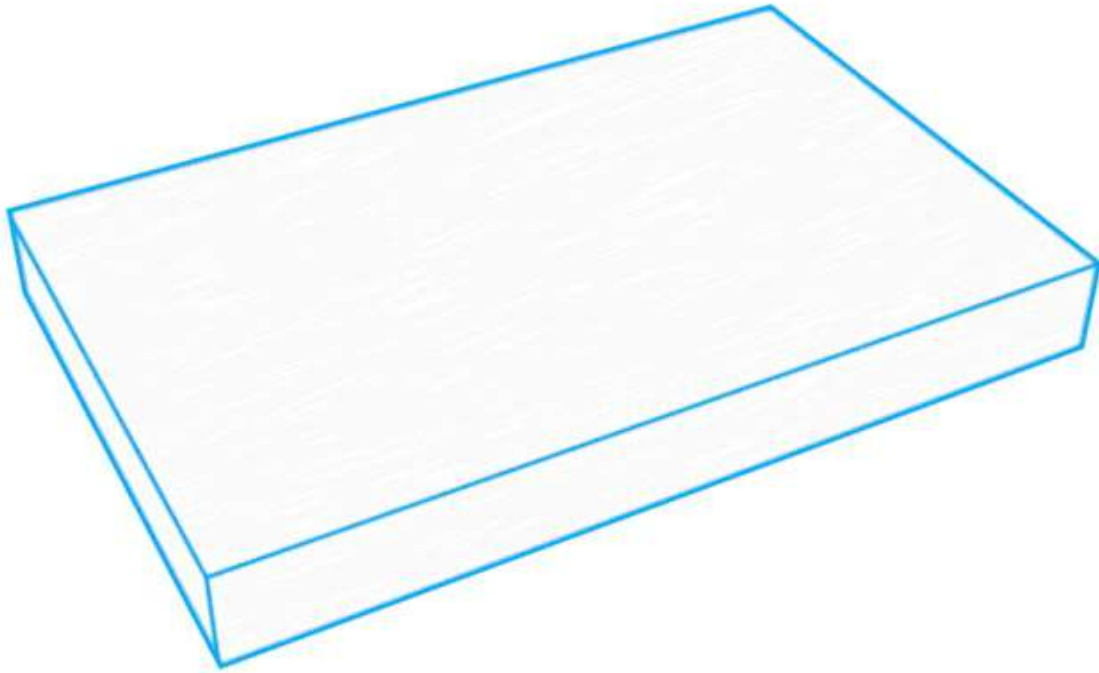

💡 To prevent scratches during transit, it is recommended that you unbox and install the modesty panels in the actual room where the lectern will be used.

⚠️ If your large acrylic modesty panel has a custom logo, a clear plastic protective film has been placed over it to protect the logo during shipping. Slowly remove this film and the adhesive dots that hold it in place.

⚠️ If your large modesty panel includes a custom-printed logo, this artwork may be covered with a protective film. Leave this protective film in place for now.

- Carefully remove three panels of your modesty panel set from its packaging.
- Rest each panel on a towel or the packaging foam.

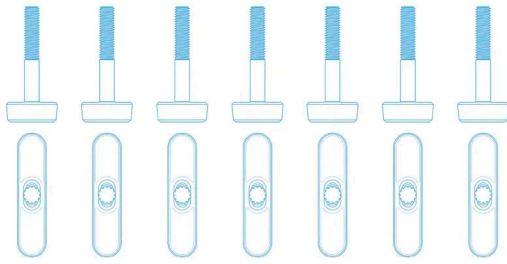

- Remove the masking paper or film from both sides of each panel.

Assembly

 Standard modesty panels are frosted on both surfaces. Therefore the panel is reversible and the modesty panel spacers can be installed to either panel side.

 The installation hardware for your modesty panel set is included with your H900 Heckler Lectern.

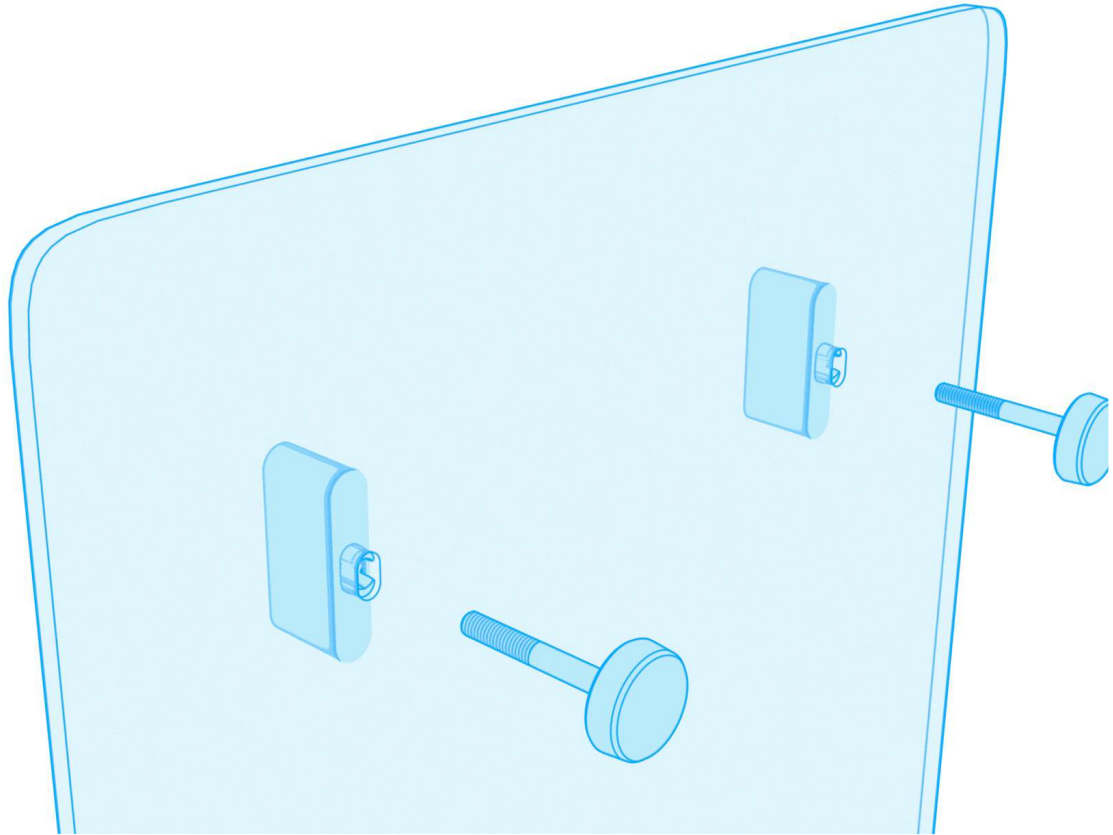

Modesty Panel
(DO NOT DISCARD)

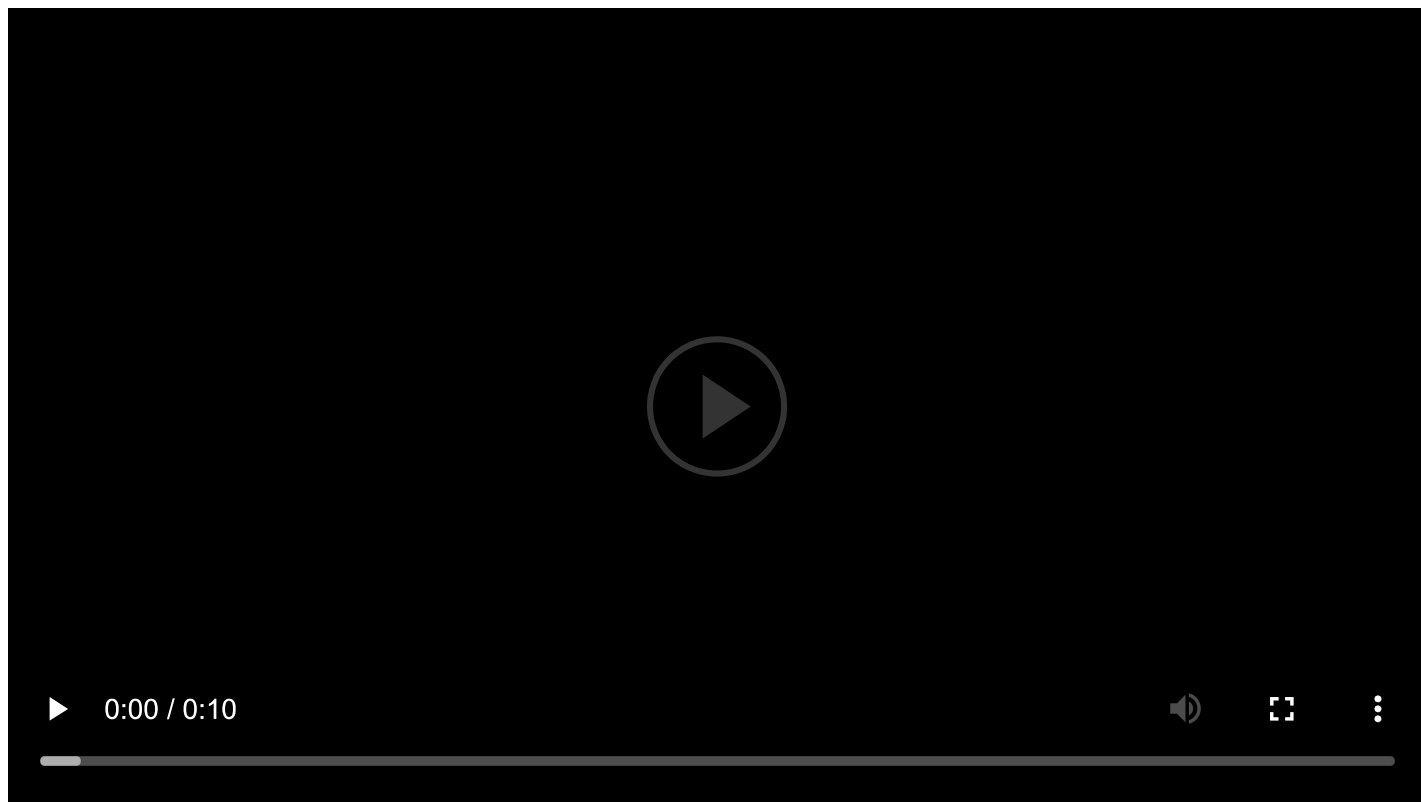

- Press and install a modesty panel spacer into each pill-shaped hole in the panel.

- Fasten each modesty panel thumbscrew through the panel and then through the spacer. The spacer will retain the screw, creating a tool-less panel installation.

Installation

- Grip the top center edge with one hand and lift the panel. Position it to align the screws with the mounting hole positions on the sides of the lectern.
- With your other hand, tighten each thumbscrew. Gently wiggle the panel as you tighten the thumbscrews to ensure a firm installation.

 Only tighten the thumbscrews by hand. Using tools to over-tighten the screws could damage the modesty panel.
