Savi® W445-M
Wireless headset system

User Guide

OPTIMIZED FOR
Microsoft® Lync™
Welcome

Congratulations on purchasing your new Plantronics product. This user guide contains instructions for setting up and using your Savi W445-M (D100-M USB Adapter + WH500 Headset) Wireless Headset System.

Please refer to the separate safety instructions for important product safety information prior to installation or use of the product.

Savi W445-M USB Adapter and Charger

- USB Adapter
- Base Power Supply
- Deluxe USB Charging Cable
- Deluxe Charger Base with Spare Battery

Savi WH500 Headset

- Headset
- Headbands
- Battery
- Fit kit with earloops, eartips and foam sleeve
2 System Features

Savi USB Adapter Features

Savi WH500 Headset Features

- Indicator Light
- Subscription Button
- Call Control Button
- Microphone
- Volume and Mute Button (press in to mute/unmute)
- Headset (fitted with earloop and eartip)
3 Headset Setup

Installing the Headset Battery

Position the battery as shown on the headset and slide into position until the battery snaps into place.

NOTE This product has a replaceable battery. Use only the battery type supplied by Plantronics.

Customize the Headset

The headset can be converted for wearing on the left or right ear with either an earloop or headband.

Right earloop configuration

1 Choose the size of earloop that fits most comfortably. Align the earloop as shown and insert it onto the headset.

2 Rotate the earloop up 90 degrees.

3 Choose the size and style of eartip that fits most comfortably. Align the eartip with the notch facing the microphone as shown.

4 Press in to attach.

Left earloop configuration

1 Choose the size of earloop that fits most comfortably. Align the earloop as shown and insert it onto the headset.

2 Rotate the earloop up 90 degrees.

3 Choose the size and style of eartip that fits most comfortably. Align the eartip with the notch facing the microphone as shown.

4 Press in to attach.
Wearing the Headset

When you wear the headset, the microphone should rest as close to your cheek as possible without touching. The microphone can be adjusted inward by the pivoting earpiece to optimize the position of the headset.

1. Slide the headset over and behind your ear and fit the ear tip into your ear.

2. Place your index finger on the headset indicator light and gently push in towards your cheek. As the headset is pushed in, you will feel soft clicks as the pivoting earpiece moves the microphone close to your mouth.

Fitting the Headset with a Headband

The headset can be rotated for wearing on the left or right ear.

1. Hold the headband so it is aligned to receive the headset as shown and insert the headset into the headband.

2. Rotate the headset up.

3. To optimize the position of the headset, push the headset in so the microphone is close to your mouth.
### 4 System Setup

#### Connecting the Power Supply

1. Connect the base power supply into the power jack on the Deluxe Charger Base.
2. Connect the power supply to the outlet. The power indicator light will be solid green.

#### Docking and Charging the Headset

1. Gently push the headset into the charging cradle. The charging indicator light on the headset will flash white to indicate that the headset battery is charging and will turn solid white when fully charged.
2. Charge for at least 20 minutes prior to first use. A full charge takes 3 hours.

#### Charging the Spare Battery

Both the Deluxe Charge Base and Deluxe Charging Cable can charge both the headset battery and the spare battery simultaneously or independently if desired. The spare battery is shipped with Savi 445 in the Deluxe Charger Base battery compartment. See “Replacing Your Headset Battery” for details on replacing your battery even during a call.

#### Charging the Battery in the Charge Base

1. Ensure the deluxe charger base is powered on and the battery is correctly seated in the battery compartment. While charging the battery charge indicator will flash green; once fully charged the charge indicator will be solid green.

#### Charging the Battery in the Deluxe USB Charger

1. Connect the USB charger to an available USB port on the PC.
2. Set the battery on the battery-shaped receptacle and gently push down. Then slide the battery in the direction shown until the battery clicks into place. While charging the battery charge indicator will flash green; once fully charged the charge indicator will be solid green.

**NOTE** The USB charging cable can also be used to charge the headset.

To successfully charge your headset with the USB cable the PC must be on and in an active state (not standby). The charging time will vary according to the number of other devices drawing power from the PC’s USB port(s).
Connecting the USB Adapter to your PC

1. Insert the USB adapter into USB Port on PC. The indicator light on the USB adapter will be solid red to indicate the USB adapter is powered on and will turn solid green when it finds the headset.

NOTE The headset may have to be charged before the USB adapter can find it.

2. USB adapter can be folded as shown.

IMPORTANT NOTE For best performance it is recommended that Windows is updated with Service Pack levels listed below:

- Microsoft Windows® XP Service Pack 3 (SP3) or later
- Microsoft Windows Vista® Service Pack 1 (SP1) or later

Loading software

1. Load Plantronics software by visiting plantronics.com/software and click on the download button.

5 Using Your Headset System

Powering Up the Headset
If the headset battery is charged and connected to the headset, the headset is automatically on. The headset does not have an on/off button.

Talk Time
With a single full charge, the Savi W445-M will provide up to 7 hours of talk time in narrowband mode. Talk time will be reduced when operating in wideband mode and/or if the headset is used consistently at a far distance from the adapter. The battery can be replaced, even mid-call, giving essentially unlimited talk time. See “Replacing Your Headset Battery”

Muting a Headset During A Call
To mute/unmute the call, press the volume/mute button in. The USB adaptor light will flash red when the headset is muted.

When mute is activated, you will hear three high tones. When unmuted, you will hear three low tones.

After the Plantronics software is loaded, the mute tones can be turned off by going to Start > Programs > Plantronics Control Panel > Devices > Device Settings > Headset – Mute Tone.

Right Ear Headset Button Functions
This table shows the headset button functions when you are wearing the headset on the right ear. If you wear the headset on the left ear, the volume button presses are opposite. See the appendix for a left ear headset button functions table.

Replacing Your Headset Battery

1. Once your spare battery is fully charged, remove the spare battery from the battery compartment on the side of the Deluxe Charging Cradle or from the back of the Deluxe USB Charging Cable. Because the battery is hot-swappable, you won’t lose an active call if you replace the battery within five minutes.

2. Disconnect the battery from the headset.

3. Slide the charged battery onto the headset until you hear a click.

4. Charge the spent battery by placing it in the Deluxe Charge Cradle battery compartment and closing the door, or on the Deluxe USB Charging cable as shown.

Placing the Headset in Sleep Mode

If you won’t be using the headset for a long period of time and the headset will not be in the charging cradle, you can put the headset in sleep mode. With the headset idle, press the call control button for three seconds until you see the headset flash white twice. To wake the headset, press the call control button again and you will see two white flashes.

Battery Storage Time

If you remove a fully charged battery from the headset, it will provide up to 75 hours of battery storage time if stored under normal storage conditions.

Headset Tones

Out of range warning
If you are on a call and go out of the operating range, you will hear three low tones. You will hear a single mid tone when you are back in range.

If you stay out of range, active calls will be suspended. Calls will be re-established when you walk back into range. If you remain out of range for more than 5 minutes, the system will drop the call.

If you are not on a call and go out of the operating range and press the call control button, you will hear a single tone for the button press and three low tones for the failure to make a link.

Low battery warning
If you are on a call, you will hear a repeated single low tone every 15 seconds indicating that the battery is low. You should recharge the headset immediately.

If you are not on a call and press the call control button, you will hear three low tones indicating that the battery is low. You should recharge the headset immediately.

Battery Life

At the lower right corner of your screen in your system tray, your headset battery status will be indicated with one of the following icons:

A warning will be issued if your headset is critically low.
Headset Indicator Light

If you are not on a call, you can toggle the headset in-use indicator light on and off by pressing the headset volume down button (press volume up for left ear configuration) for three seconds.

Subscribing a Headset

The headset and USB adapter that are supplied together are already subscribed to each other. However, if you wish to use a new headset with your existing USB adapter or you need to restore subscription to your current headset, the units can be subscribed to each other by the following method:

1. Ensure your headset is charged.
2. Double press the subscription button on the USB adapter. The USB adapter will flash red and green.
3. Press the volume up button (press volume down for left ear configuration) on the headset for three seconds until the headset indicator light turns solid white.
4. When the indicator light on the USB adapter goes solid green, the headset and the USB adapter are subscribed to one another.

To ensure subscription was successful, press the call control button: the headset will flash white and the USB adapter will flash green.

NOTE If the subscription process times out after two minutes or if the subscription process fails, the USB adapter indicator light will become solid red for four seconds and then return to its previous state. If this occurs, try to re-subscribe the headset again.

Ending Subscription

If the USB adapter is in subscription mode and you want to stop the adapter from searching for a headset, press the subscription button again. The subscription light will turn solid red for four seconds and then go to its previous state.
6 Making Calls With your Headset and PC

Software Installation

It is highly recommended that you install the Plantronics software. Though your Savi system will operate without the software, it will limit the system’s full capabilities.

Install the Plantronics software to enable remote call answer/end with compatible softphones. The software can be downloaded at plantronics.com/software.

After installation, to visit the Plantronics control panel, click on Start > Programs > Plantronics > Plantronics Control Panel.

</tr>
</tbody>
</table>

Softphone Compatibility

Remote call answer/end from the Savi headset is available for all softphones with no additional steps by the user except Skype™. For a list of compatible softphones visit plantronics.com/software.

For Skype support, please follow these steps:

1. Skype will display the following message during the install of Plantronics Unified Runtime Engine “PlantronicsURE.exe wants to use Skype”. Choose “Allow Access” to connect.

2. You can also check Savi W445-M Skype connection status by going to Skype and checking the Tools > Options > Advanced > Advanced Settings > "Manage Other Programs Access" setting.

Auto Answer

Auto answer saves the user a button press to establish the radio link between headset and adapter. The Savi W445-M is supplied with auto answer NOT SELECTED as the default. When auto answer is set to NOT SELECTED you must press the headset call control button to answer an incoming call. When Auto Answer is set to SELECTED an incoming call will be answered when the headset is removed from the charge cradle.

To change the setting, go to: Start > Programs > Plantronics > Plantronics Control Panel > Device Settings – USB adapter.
Conferencing Up to Three Guest Headsets

While on a call, you can subscribe up to three guest headsets to your USB adapter for conferencing. As you add headsets to the adapter, an additional headset icon will appear in the Plantronics Control Panel with a number from 1 to 3 indicating the number of guest headsets subscribed to the adapter.

Guests may conference in as described below:

1. While you are on a call, place the guest’s headset into subscription mode.
2. Short press (less than one second) the subscription button on the USB adapter. The USB adapter light will flash yellow and green.
3. The USB adapter light will then turn solid yellow and you will hear a tone in the master headset indicating a guest wishes to join the call.
4. If you press the call control button on the master headset within five seconds, the guest is joined to the call.
   - If you do not press the call control button within five seconds, the request to join the call is rejected and the guest will hear an error tone in their headset.
5. Guests may leave the conference call by pressing their call control button.
   - When they do you will hear a single tone in the master headset as each guest leaves the call.

To see how many headsets are subscribed to the adapter, refer to the lower left-hand corner of the Plantronics Control Panel. The first headset is the master headset and the number inside the next headset is the number of guest headsets subscribed to the adapter. The examples below show 1, then 2, then 3 guest headsets subscribed to the adapter in addition to the master headset.
User preferences and various device settings can be changed using the Plantronics Control Panel. To start this program, click Start > Programs > Plantronics > Plantronics Control Panel.

### Devices Tab

To configure your settings, select Plantronics D100-M from the pull down menu and click the Device Settings box. Below are the setting options and defaults for the USB adapter and headset.

**NOTE** Some parameters that do not apply to a particular Plantronics device may appear grayed out.

#### Device Settings – USB Adapter Tab

</tbody>
</table>

**Range**

The Savi W445-M is supplied with high range set as the default. Range can be minimized to help with PC buzzing, improve user density, or restrict range of users.

To change the Range default in the software, go to: Start > Programs > Plantronics > Plantronics Control Panel > Device Settings – USB adapter. You can also change the range setting by holding in the subscription button of the USB adapter for three seconds while it is in an idle state. The USB adapter light will flash green for high range, yellow for medium range and red for low range.

When Range is set to HIGH a user will have up to 300 feet of range. When Range is set to MEDIUM a user will have up to 150 feet of range. When Range is set to LOW a user will have up to 50 feet of range.

**Auto Answer**

The Savi W445-M is supplied with auto answer NOT SELECTED as the default. Auto answer saves the user a button press to establish the radio link between headset and adapter.

When auto answer is set to NOT SELECTED you must press the headset call control button to answer an incoming call. When Auto Answer is set to SELECTED an incoming call will be answered when the headset is removed from the charge cradle.

To change the default, go to: Start > Programs > Plantronics > Plantronics Control Panel > Device Settings – USB adapter.

**PC Audio Bandwidth**

The Savi W445-M is supplied with wideband audio as the default. Wideband audio delivers heightened speech clarity and life-like fidelity. However, wideband audio consumes more battery power and has more stringent access criteria which reduces the number of systems that can be deployed in a small area. All PCs support wideband audio.
To change the PC Audio Bandwidth default in the software, go to: Start > Programs > Plantronics > Plantronics Control Panel > Device Settings – USB adapter. You also can toggle between narrowband and wideband audio by doing a short press (less than one second) followed by a long press (more than three seconds) on the USB adapter subscription button while it is in an idle state. The USB adapter light will flash red for four seconds upon entering narrowband mode and flash green for four seconds upon entering wideband mode. When switching between narrowband and wideband audio, you must re-establish the audio link for the changes to take effect.

**Feature Set Lock**
See the Device Settings – Security Tab for more information.

</tbody>
</table>

*The Audio and G616 Limiting features are supported in over-the-head mode only and are based on a typical headset and recommended acoustic coupling between the headset and the ear. Please see Headset setup for optimal wearing position.

**Anti-Startle**
Anti-startle provides advanced hearing protection against sudden loud sounds. When Anti-startle is SELECTED, the system identifies and eliminates sudden loud sounds and rapidly reduces them to a comfortable level. When Anti-startle is NOT SELECTED, the headset limits sound levels at 118 dBA to protect your hearing.

**G616**
G616 Acoustic Limiting provides additional hearing protection against acoustic shock. When G616 Acoustic Limiting is SELECTED, the system provides additional acoustic shock protection. Sound levels are limited to 102 dBA as recommended in the G616:2006 guideline issued by the Australian Communications Industry Forum (ACIF). When G616 Audio-Limiting is NOT SELECTED, the headset limits sound levels at 118 dBA to protect your hearing.
Feature Set Lock
See the Device Settings – Security Tab for more information.

Device Settings – Security Tab

<table>
<thead>
<tr>
<th>Options</th>
<th>Feature</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Feature Set Lock</td>
<td>Create new password</td>
<td>None</td>
</tr>
<tr>
<td></td>
<td>Change password</td>
<td>None</td>
</tr>
</tbody>
</table>

Audio Limiting
Audio Limiting provides advanced hearing protection for daily noise exposure. When Audio-Limiting is SELECTED, the system monitors and controls sound to ensure audio levels do not exceed 80 dBA or 85 dBA (whichever is selected) specified by current and imminent EU legislation. When Audio-Limiting is set to NOT SELECTED, the headset limits sound levels at 118 dBA to protect your hearing.

Hours on Phone Per Day
The default is 8 hours. If you change the setting to 2/4/6 hours, the system will adjust the audio limiting algorithm accordingly.

Applications Tab
The Applications Tab displays the status of Plantronics support for various applications such as softphones and media players. The status will only show as "enabled and running" for softphones and media players installed and running.

Audio Limiting

Audio Limiting provides advanced hearing protection for daily noise exposure. When Audio-Limiting is SELECTED, the system monitors and controls sound to ensure audio levels do not exceed 80 dBA or 85 dBA (whichever is selected) specified by current and imminent EU legislation. When Audio-Limiting is set to NOT SELECTED, the headset limits sound levels at 118 dBA to protect your hearing.

Feature Set Lock

The Plantronics software allows the following device settings to be locked by the IT staff and prevent end users from changing them.

- Range
- Auto Answer
- PC Audio Bandwidth
- Audio Protection (Anti-Startle, G616, Audio Limiting and Hours on phone per day)

The ability to lock/unlock these settings requires a password. In order to lock/unlock any setting follow these steps:

1. Create a new password
   From the Security screen, create and confirm your new password and press Set. This will store the password directly in the device.

2. Lock/unlock a device setting
   From the USB Adaptor or Advanced screen, enter your password in Feature Set Lock, lock/unlock each feature as desired and click Apply.

Change Your Password

You can always change the old password to a new one in the Change Password section. You will only able to change a password if there is a previous password set in the device.

NOTE In case you forget your password, you will need to call your local Plantronics Technical Support for assistance.
**Preferences Tab**

The Preferences Tab allows you to set preferences for the media player as well as other general settings.

<table>

</tbody>
</table>

**Ring Both Headset and PC**

This parameter gives you the option to have the PC ringtone played on both the headset as well as the PC speaker.

When this parameter is selected, the PC ringtone will be heard on both the PC speaker as well as the headset.

When this parameter is not selected, the PC ringtone will only be heard on either the headset or the PC speaker based on how the PC audio has been set up.

**Microsoft OC/Lync Dial-tone Enabled**

If this feature is selected, when a PC radio link is established, Microsoft OC/Lync will assume the user is trying to place a VoIP call and provide a dial tone.

If this feature is not selected, when a PC radio link is established, Microsoft OC/Lync will sit idle.

**Audio Sensing Enabled**

Audio Sensing is a special feature supported by Plantronics wireless devices that can detect an audio signal at the USB port and automatically establish a PC radio link between the USB adapter and wireless headset without the user having to press the PC call control button. If the parameter “Microsoft OC/Lync Dial-tone Enabled” is selected, then every time a PC radio link is established the Microsoft OC/Lync dial tone will be heard. However, the user may have pressed the PC call control button to listen to music, etc., and does not want to hear the dial-tone. In this case, if the user selects the “Audio Sensing Enabled” parameter, the radio link will be established automatically when any PC audio is detected at the USB port, thus eliminating the need for the user to press the PC call control button.

**Maintain Headset to PC Link**

This parameter forces the radio link to the PC to stay active even after the call has ended. This can eliminate the need to re-establish the radio link when switching between PC audio applications.

**About Tab**

The About Tab provides on-line access to this printable user guide and also includes Plantronics contact information. The current version of software and firmware currently running on your system is also shown here.
All required software for Savi W445-M can be remotely updated when updates are available. Start Plantronics Update Manager from Windows Start Programs menu to change settings such as automatic or manual check for updates.

**Check for Updates Automatically**

By enabling this check box, you will activate a periodic automatic check for available software updates.

**Check for Updates Now**

You can choose to check for available software updates at any time by clicking on the Check For Updates Now button in Update Manager. From the Start menu > Programs > Plantronics > Plantronics Update Manager.

**Install Checked Updates**

Following an Automatic or Manual Check For Updates, this field will be populated with any applicable software updates and the Install Checked Updates will begin installation.
# 9 Troubleshooting and Common Questions

<table>
<thead>
<tr>
<th>Issue</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>My headset is unstable.</td>
<td>When you wear the headset, the microphone should rest as close to your cheek as possible without touching. The microphone can be adjusted inward by the pivoting earpiece to optimise the position of the headset. See Wearing the headset.</td>
</tr>
<tr>
<td>My headset doesn’t work with Microsoft Lync/Office Communicator.</td>
<td>Ensure your headset is charged. Ensure your headset is subscribed to the USB adapter. If you press the call control button on your headset, you should hear a Microsoft Lync/Office Communicator dial tone. If not, you need to ensure the headset is the default device by going to Microsoft Lync/Office Communicator &gt; Tools &gt; Set Up Audio and Video &gt; Handset or Headset and choosing your headset as the default. Disconnect and re-connect the USB adapter. It will be solid red until it subscribes to the headset; it will be solid green when successfully subscribed to the headset. Restart your computer.</td>
</tr>
<tr>
<td>I hear Microsoft Lync/Office Communicator audio through my PC speakers and only want to hear it through my headset.</td>
<td>Ensure that the headset is the default speaker/speakerphone device. Go to Microsoft Lync/Office Communicator &gt; Tools &gt; Set Up Audio and Video &gt; Speaker/Microphone or Speakerphone and select your headset as the default device.</td>
</tr>
<tr>
<td>Speaking and/or listening volume is too low or too high.</td>
<td>Adjust headset listening volume with volume button. Adjust listening/speaking volumes in the computer’s sound control panel/system preferences. Adjust listening/speaking volumes in the softphone application.</td>
</tr>
<tr>
<td>The sound is distorted or I hear an echo in the headset.</td>
<td>Reduce speaking and/or listening volume on the computer using your softphone application. Point microphone towards your chin. If the distortion is still present, lower the volume on the headset.</td>
</tr>
</tbody>
</table>
| I can no longer hear any audio through my PC Speakers.              | For Windows XP systems  
  - Refer to the “Audio” tab of the “Sounds and Audio Devices” option in your PC Control Panel.  
  - Under “Sound Playback”, change the default setting from “Plantronics D100-M” to your PC speakers. Click “OK” to confirm your change.  
For Windows Vista systems  
  - Refer to the “Sound” option in your PC Control Panel.  
  - Under the “Playback” tab, change the default setting from “Plantronics D100-M” to your PC speakers. Click “OK” to confirm your change.  
For Mac OS X  
  - Choose Apple menu > System Preferences and click Sound.  
  - Click Output, and then select “Internal Speakers” or your speaker choice. |
| Talk time performance is significantly degraded even after a full recharge. | The replaceable battery is wearing out. Contact plantronics.com to purchase a new battery. Use only the battery type supplied by Plantronics. |
## 10 Appendix
