What you can do with this unit

Sound beams are reflected off walls using unique real surround sound formats and techniques, allowing listeners to enjoy their preferred acoustic environment.

- Automatically and quickly adjusts surround sound effects for the listening room setup (IntelliBeam) ➔ p. 32
- Reproducing stereo or multichannel sounds with the sound fields like actual movie theaters and concert halls (CINEMA DSP) ➔ p. 41
- Enjoying compressed music with enhanced sound (Compressed Music Enhancer) ➔ p. 43
- Delivering sound to a specified location (Target playback mode) ➔ p. 42

Sequential operation of a TV, this unit, and BD/DVD player (HDMI Control) ➔ p. 37

Wide variety of supported content

- Media server (PC/NAS) ➔ p. 62
- Internet radio ➔ p. 64
- AirPlay ➔ p. 66
- Music stored on mobile devices ➔ p. 68

Dedicated apps for mobile devices ➔ p. 5

Listen to audio input to the unit with Bluetooth® headphones or speakers ➔ p. 49

Plays back audio content from Bluetooth® devices ➔ p. 48

Share music via your home network ➔ p. 5

Sequential operation of a TV, this unit, and BD/DVD player (HDMI Control) ➔ p. 37

* Supports 4K video and HDCP version 2.2
Unrestricted playback of music over a network using MusicCast CONTROLLER

The free dedicated app for mobile devices, MusicCast CONTROLLER, allows you to listen to music stored on mobile devices such smartphones, or on servers, or to listen to Internet radio stations and many kinds of major streaming services. This app also allows you to distribute content to other MusicCast-enabled devices for synchronized playback.

The MusicCast CONTROLLER app can also be used to perform such tasks as selecting the input source and adjusting volume.

See the “MusicCast Setup Guide”, or visit the Yamaha website for details. Search for “MusicCast CONTROLLER” on the App Store or Google Play.

Bluetooth functions

You can receive and play audio from a Bluetooth device, such as a mobile device over a wireless connection. You can also transmit audio input to the unit to a Bluetooth headphones.

About this manual

- In this manual, operations that can be performed using either the front panel keys or the remote control are explained using the remote control.

- ❋ indicates supplementary explanations for better use.

- ❗ indicates precautions for use of the unit and its feature limitations.

* In this manual, iOS and Android mobile devices are collectively referred to as “mobile devices”. The specific type of mobile device is noted in explanations as needed.
Before using the unit, make sure you have received all of the following items.

**The YSP-2700**

- Center unit (YSP-CU2700)
- Wireless subwoofer (NS-WSW121)

**Supplied accessories**

- Remote control
- Batteries (AAA, R03, UM-4) (x2)
- Optical digital audio cable* (1.5 m (4.9 ft))
- IntelliBeam microphone (6 m (19.7 ft))
- Cardboard microphone stand
- Stands (x2)
- Owner’s Manual CD-ROM
- Quick Reference Guide
- MusicCast Setup Guide

* The China model comes with a coaxial digital audio cable rather than an optical digital audio cable.

* The supplied optical digital audio cable may not be needed depending upon connections.

**Supplied accessories for SPM-K20**

- Spacers (x2)
- Pads (x3)
- Screws (M4, 22 mm) (x2)
- Mounting template
Preparing remote control

Before installing batteries or using the remote control, be sure to read battery and remote control precautions in “Quick Reference Guide” (separate booklet).

Installing the batteries

1. Press down on the arrow and slide the cover in the direction in which it points.

2. Battery × 2 (supplied) (AAA, R03, UM-4)

3. Slide the cover back to close it.

Operation range

Within 6 m (20 ft)
Controls and functions

Center unit (front, top)

1. **Front panel display**
   - Displays the unit's settings, such as the name of an audio input source or surround mode (p. 45). The setting values are also displayed.

2. **indicator**
   - Lights to show the system condition.
     - Glows green: Power on
     - Glows red: Power off (when the HDMI control or network standby is activated)
     - Turns off: Power off

3. **(Wi-Fi) indicator**
   - Shows the status of wireless network connection (p. 27).

4. **(Bluetooth) indicator**
   - Shows the status of Bluetooth connection (p. 47, 49).

5. **Remote control sensor**
   - Receives infrared signals from the remote control (p. 10).

6. **CONNECT key**
   - Use to connect the unit to a network using the MusicCast CONTROLLER app (p. 50).

7. **INPUT key**
   - Select an audio input source.

8. **MUTE key**
   - Mute the sound (p. 39).

9. **VOLUME (+/-) keys**
   - Adjust the volume of the unit (p. 39).

10. **key**
    - Turn on/off the unit.

- When the unit is turned off, this unit consumes a small amount of power in order to search for HDMI signals or to receive signals from a network device.

- The front panel display turns on for about 3 seconds only when the unit is operated.

- “Dimmer” can adjust the brightness of the front panel display and indicators in the setup menu (p. 85).
### Center unit (rear)

1. **INTELLIBEAM MIC jack**
   - For connecting the supplied IntelliBeam microphone (p. 33).

2. **SYSTEM CONNECTOR jack**
   - For connecting to the supplied subwoofer using a wired connection (p. 29).

3. **SUBWOOFER OUT jack**
   - For connecting to the supplied subwoofer using a wired connection (p. 29).

4. **AUX1 input jacks**
   - For connecting to a playback device equipped with the analog audio output jacks (p. 26).

5. **AUX2 input jack**
   - For connecting to a playback device equipped with a coaxial digital audio output jack (p. 25).

6. **TV input jack**
   - For connecting to a TV equipped with an optical digital audio output jack (p. 24).

7. **NETWORK jack**
   - For connecting to a network with a network cable (p. 27).

8. **HDMI OUT (ARC) jack**
   - For connecting to an HDMI-compatible TV and outputting video/audio signals (p. 24).

9. **HDMI IN 1–3 jacks**
   - For connecting an HDMI-compatible playback device such as a BD/DVD player, a satellite and cable TV tuner, and a game console (p. 25).

10. **UPDATE ONLY jack**
    - Use to update this unit’s firmware (p. 92).

11. **Antenna**
    - Raise the antenna after the unit is installed (p. 23).

12. **Power cable**
    - For connecting to an AC wall outlet (p. 28).
Remote control

1. **ECO key**: Turn the Eco function on or off (p. 45).
2. **Input selector keys**: Select an audio input source to be played back (p. 39).
   - **NET key**: Select an audio input via a network (p. 50). Each time the key is pressed, the input source is selected as follows:
     - SERVER → NET RADIO → AirPlay → Streaming music service (if available) → MusicCast Link → SERVER → …
   - **HDMI 1–3 keys**: For devices connected to the HDMI 1–3 jacks (p. 39)
   - **TV key**: For a device connected to the TV input jack (p. 39)
   - **AUX 1 and 2 keys**: For devices connected to the AUX 1 and 2 input jacks (p. 39)
   - **† key**: For a Bluetooth device (p. 48)
3. **SYSTEM MEMORY keys**: Save IntelliBeam measurements, speaker volume, and other settings (p. 46).
4. **SUB (+/-) key**: Adjust the volume of the subwoofer (p. 39).
5. **SETUP ( ) key**: Display the setup menu (p. 69).
6. **△/∇/◄/► keys, ENTER key**: Change the setting (p. 69).
7. **RETURN ( ) key**: Return to the previous menu screen.
8. **CINEMA DSP program keys**: When playback is in surround playback mode, select the CINEMA DSP programs (p. 41).
9. **SURROUND key**: Switch to surround playback mode (p. 41).
10. **STEREO key**: Switch to stereo playback mode (p. 42).
11. **TARGET key**: Switch to target playback mode (p. 42).
12. **Ø key**: Turn on/off the unit (p. 39).
13. **NET RADIO (1–3) keys**: Register and play streaming services such as Internet radio stations via the unit (p. 64).
14. **ENHANCER key**: Turn Compressed Music Enhancer to on or off (p. 43).
15. **CLEAR VOICE key**: Turn the CLEAR VOICE function on or off (p. 43).
16. **CH LEVEL key**: Adjust the volume balance during playback (p. 43).
17. **VOL (+/-) key**: Adjust the volume of the unit (p. 39).
18. **MUTE ( ) key**: Mute the sound (p. 39).
19. **OPTION ( ) key**: Display the option menu for each input source (p. 87).
20. **INFO ( ) key**: Switch the information display on the front panel (p. 45).
**Subwoofer (rear)**

1. **Power cable**
   For connecting to an AC wall outlet (p. 28).

2. **SUBWOOFER PAIRING button**
   Used to pair the center unit with the subwoofer manually (p. 105). Use a pin or other pointed object to press this key.

3. **STATUS indicator**
   Shows subwoofer's connection status (p. 29).
   - Glows green: Power on
   - Glows red: Power off

4. **SYSTEM CONNECTOR jack**
   For connecting to the center unit using a wired connection (p. 29).

5. **INPUT jack**
   For connecting to the center unit using a wired connection (p. 29).
## General setup procedure

</tbody>
</table>

This completes all the preparations. Enjoy playing movies, music and other content with the unit!

- See “NETWORKS” (p. 50) for information regarding network connection and audio playback via a network.
Installation

This unit reflects sound beams off of walls to create the surround sound effect. The position of this unit in relation to the listening position and walls is important to achieving the desired surround sound effects. Refer to pages 13 to 17 when installing the unit. When installing this unit on a rack behind which there is limited space, for example, it may be easier to connect external devices to this unit first. This will depend upon the installation location. See pages 24 to 27 for information regarding the connection of external devices.

Caution
- Be sure to install the center unit on a large, stable stand where it does not fall subject to vibrations, such as from an earthquake, and where it is out of the reach of children.

Notes
- The subwoofer speaker is not magnetically shielded. Do not install hard disk drives or similar devices near the subwoofer.
- Do not stack the center unit and subwoofer directly on top of other playback devices, or vice versa. Heat and vibrations may result in damage or malfunction.

Recommended place for installation

- Install the unit in the center of the left and right walls.
- If the antenna is raised (p. 23), position the center unit so that the antenna does not obstruct the TV screen.
- Attach the stands if the center unit does not sit high enough (p. 18)*.
- The center unit can be mounted on a wall using the optional Wall Mount Bracket SPM-K20 (p. 19).

* If the center unit will be installed on a TV stand, attach the center unit stands to increase its height. Position the center unit so that it does not obstruct the TV's remote control sensor or signal transmitter for 3D glasses.

- The listening position (such as sofa, etc.) should be located at the front of the unit.
- The distance between the listening position and the unit should be more than 1.8 m (6 ft).

Connecting the center unit and subwoofer via a wireless connection

The center unit and subwoofer communicate wirelessly. Subwoofer performance may be affected if the subwoofer is placed on a metal rack, or if there is a metal plate between the subwoofer and the center unit. Use a wired connection to connect the subwoofer to the center unit if sounds are interrupted due to the installation condition (p. 29).
Example of installing the unit

This unit outputs sound beam as shown in the illustrations below. Install this unit where there are no obstacles such as furniture obstructing the path of sound beams. Otherwise, the desired surround sound effects may not be achieved.

If the unit is installed so that it is parallel to a wall, install it as close to the exact center of the wall as possible.
If the unit is installed in a corner of a room, position it at a 40–50° angle to the adjacent walls.

Parallel installation
Install this unit as close to the exact center of the wall as possible.

Ideal installation condition
Install this unit as close to the exact front of your normal listening position as possible. The distance between listening position and the unit should be more than 1.8 m (6 ft).

Objects, such as furniture

Sound beam output varies depending upon the surround setting (p. 40) and the channel output setting (p. 75). The illustration above shows the path of sound beams when surround playback is enabled and “Front” in the Channel Out setting is set to “Beam”.

Corner installation

The illustrations above show the path of sound beams when surround playback is enabled (p. 40) and “Front” in the Channel Out setting is set to “Stereo” (p. 75).

• If the unit cannot be installed evenly between the left and right walls, sound beams can be adjusted to achieve natural surround sound effects (p. 17).
Installing in a non-square room
Install this unit so that the sound beams can be reflected off the walls.

Irregularly shaped rooms with solid walls on all sides

Irregularly shaped rooms that are open to a hallway on one side

* If this unit cannot be repositioned, or the listening position cannot be changed, the optional YRB-100 sound reflection board may be installed for a better surround sound experience (p. 103).
Example of installing the unit in a living room

- The legs on a table are not considered obstacles as sound beams normally pass through them. A cupboard installed facing the wall reflects sounds.
- As the heavy curtains absorb sounds, the sound features of the listening room is different from the case with the curtain opened and the case with the curtain closed. Using saving settings function enables to save the best settings for each case of listening room (p. 46).

![Objects, such as furniture](image)

Unrecommended listening environments

This unit creates surround sound by reflecting projected sound beams off the walls of your listening room. The surround sound effects produced by this unit may not be sufficient when this unit is installed in the following locations.

- Rooms with walls inadequate for reflecting sound beams
- Rooms with acoustically absorbent walls
- Rooms with measurements outside the following range: W (3 to 7 m (10 to 23 ft)) × H (2 to 3.5 m (7 to 11.5 ft)) × D (3 to 7 m (10 to 23 ft))
- Rooms where objects such as furniture are likely to obstruct the path of sound beams
- Rooms where less than 1.8 m (6 ft) from the listening position to this unit
- Rooms where the listening position is close to the walls
- Rooms where the listening position is not in front of this unit

Enjoying surround effects regardless of conditions (My Surround)

The My Surround function creates rich surround sound effects in rooms with less than optimal surround sound conditions. See “Channel Out” (p. 75) for more information.
Adjusting sound beams to achieve optimal surround sound effects

This unit's AUTO SETUP (p. 32) can be used to automatically adjust sound beams to achieve the optimal surround playback environment according to the listening room setup. In addition to using AUTO SETUP, sound beams can be adjusted manually to achieve surround sound effects best suited to the listening room setup when the unit is installed as described below.

Installing the unit near a corner of the room

When installing the unit near a corner of the room as shown in the illustration below, front channel sound may seem to come from an unnatural direction if beam settings are configured using AUTO SETUP.

Should this occur, adjust the left and right front channels using “Image Location” (p. 74) in the setup menu to achieve more natural sound.

Installing the unit in an irregularly shaped room

When the unit is installed in a room that is not rectangular, sound beams may not be properly reflected off the walls as shown in the illustration below.

Should this occur, perform AUTO SETUP, and then adjust the angle of beam from the channel from which sound is not properly heard using “Horizontal Angle” (p. 72) in the setup menu to achieve even distribution of sound.
### Installing the stands

If the center unit does not sit high enough, attach the stands supplied with the unit to the center unit to increase the height at which it sits.

1. **Remove the seal from the stand.**

2. **Align the protrusions on the stand with, and insert them into, the holes on the rear panel.**

### Removing the stands

Pull the stands straight out.
Mounting the center unit on a wall

If your TV is mounted on a wall, the optional Wall Mount Bracket SPM-K20 can be used to mount this unit on the wall under the TV. See “Dimensions” (p. 22) for this unit and SPM-K20 dimensions.

- Be sure to read “SAFETY INSTRUCTIONS” in the Installation Manual supplied with the SPM-K20 before mounting it.
- The template and screws supplied with the SPM-K20 are not used with this unit.
- SPM-K20 may not be available in some countries or regions.

- Space between this unit and the wall is limited. Therefore, use of a flexible HDMI cable, or right-angle connector, (neither supplied) is strongly recommended.

Mounting the SPM-K20

Be sure that there is enough space on the wall to mount the wall mount bracket and this unit. Follow the instructions below to mount both.

1. Attach the three supplied pads to the wall mount bracket as shown in the illustration.

Follow instructions provided from this page through page 22.
2 Attach the template supplied with this unit to the wall and use a thumbtack or pin to mark the position where screws will be inserted in the wall.

Attach the template to the wall so that the center of the template is aligned with the center of the TV.

The wall mount bracket is designed to be offset slightly to the right of the center of this unit.

Once screw position has been marked, remove the template.

3 Mount the wall mount bracket on the wall.

Screw self-tapping screws (not supplied) partway into the wall where marked using the template.

Mount the wall mount bracket on these screws, and then tighten the screws.

Screw self-tapping screws, at least six including the two previously used, into as many holes around the outer edges of the wall mount bracket as possible to ensure sufficient strength.
1. Be sure that screws are inserted in a sturdy portion of the wall or pillar. Do not mount the bracket on a wall made of materials such as mortar or veneer, which may chip or peel. If screws fall out, the wall mount bracket will also fall, resulting in damage or injury.

2. Attach the spacer supplied with this unit to the bottom of this unit using the screws also supplied with this unit.

3. Do not tighten the screws until this unit has been mounted on the wall mount bracket.

4. Connect commercial cables to this unit.

5. Mount this unit on the wall.

6. Insert the screws on this unit into the mounting holes on the left and right sides of the wall mount bracket, and then slide this unit to the left.

- When mounting or removing it, hold this unit firmly with both hands. If this unit falls, damage or injury could occur.
7 Tighten screws.  

Tighten the screws used to attach the spacer to this unit in step 4.
Raising the antenna

Raise the antenna on the rear panel of the unit when connecting a wireless router (access point) to use a network.

Hold the base of the antenna while raising it to its upright position.

- Do not apply excessive force on the antenna. Doing so may damage it.
- Be sure to check the direction in which the antenna moves, and angle it in the proper direction.
- Do not remove the antenna.

- For details on the wireless connection, refer to p. 27.
Connecting a TV

Connect a TV to the unit so that video input to the unit can be output to the TV. You can also enjoy playback of TV audio on the unit.

- Use a 19-pin HDMI cable with the HDMI logo printed on it. A cable with a maximum length of 5 m (16 ft) is recommended to prevent degradation of signal quality.
- For playback of 3D and 4K video content, use a high-speed HDMI cable.
- This unit supports HDCP version 2.2, a copy protection technology. For playback of 4K video, connect the unit to the HDMI input jack (one compatible with HDCP 2.2) on an HDCP 2.2-compliant TV.
- To play 4K (4:4:4) video content, set “4K MODE” in advanced setup to “MODE 1” (p. 90).

### TVs that support Audio Return Channel (ARC)

Connect the TV to the unit with an HDMI cable (not supplied).

When connecting a TV that supports Audio Return Channel (ARC), enable the HDMI control function (p. 80).

#### What is Audio Return Channel (ARC)?

In order for the unit to play audio from a TV, the TV must usually be connected to the unit via an audio cable as well as an HDMI cable. If, however, the TV supports Audio Return Channel (ARC), TV audio signals can be input to the unit via the HDMI cable that outputs video signals from the unit to the TV.

- Use an ARC-compatible HDMI cable.

### TVs that do not support Audio Return Channel (ARC)

Connect the TV to the unit with an HDMI cable (not supplied) and an optical digital audio cable.

#### TV input jack

Audio output (optical digital)

1. Remove the cap
2. Check the direction of the plug

If the TV has no optical jack

Connect the audio output jack on the TV to the AUX1 (analog) input jacks or AUX2 (coaxial digital) input jack on the unit, and set “TV Input” in the setup menu to “Analog [AUX 1]” or “Coaxial [AUX 2]” accordingly (p. 80). TV audio can be played through the unit by pressing the TV key on the remote control.
 Connecting playback devices

Connect video devices such as BD/DVD players, set-top boxes (STBs) and game consoles to the unit. Depending on the video/audio output jacks available on your video device, choose one of the following connections. We recommend using an HDMI connection if the video device has an HDMI output jack.

### HDMI connection

Connect a video device to the unit with an HDMI cable (not supplied).

⚠️ This unit supports HDCP version 2.2, a copy protection technology.

The audio/video played on the video device will be output though the unit by switching input to HDMI 1–3 using the HDMI 1–3 key on the remote control.

⚠️ Once the HDMI control function has been activated (p. 37), video and audio content from playback devices can be output from the TV even when this unit is off (HDMI signal pass-through).

⚠️ Use a 19-pin HDMI cable with the HDMI logo printed on it. A cable with a maximum length of 5 m (16 ft) is recommended to prevent degradation of signal quality.

⚠️ For playback of 3D and 4K video content, use a high-speed HDMI cable.

⚠️ When audio from the video device cannot be output via the HDMI jack, use an optical digital audio cable to connect the video device to the unit via the optical digital output jack on the video device and the TV jack on the unit. If the video device is connected to the unit in this way, change “Audio Assign” to “Optical” in option menu (p. 88).

### Coaxial connection

Connect a video device to this unit via a coaxial digital cable. Next, connect the video device’s video output to the TV’s video input.

The audio played on the video device will be output though the unit by switching input to AUX2 using the AUX 2 key on the remote control.
**Analog connection**

Connect a video device to this unit via a stereo cable (not supplied). Next, connect the video device’s video output to the TV’s video input.

The audio played on the video device will be output through the unit by switching input to AUX1 using the AUX 1 key on the remote control.
Connecting to a network

Wired network connections

To use a wired network connection, connect the unit to a router via an STP network cable (category 5 or higher straight cable; not supplied).

If the unit is already connected to a wireless network and you would like to switch to a wired connection, change “Network” in the setup menu to “Wired”.

Wireless network

To connect to a network, be sure that the unit is plugged into an AC wall outlet, and then connect the unit to a wireless router (access point).

Refer to the following for instructions on connecting to a wireless router (access point).

- Using the MusicCast CONTROLLER app (p. 50)
- Using connection methods other than the MusicCast CONTROLLER app (p. 53 to 59)

The indicator on the front panel glows when the unit is connected to a wireless network.

- You cannot use the wireless network connection simultaneously with the wired network connection or Wireless Direct (p. 60).
- If the unit and the wireless router (access point) are too far apart, the unit may not connect to a wireless router (access point). In such case, place them close to each other.

- If the unit will not be connected to a wireless router (access point), Wireless Direct (p. 60) can be used to connect the unit directly to a mobile device to control the unit using the MusicCast CONTROLLER app installed on that mobile device.
After all the connections are complete, plug in the power cable of the center unit and the subwoofer.
Connecting the subwoofer

Plug the subwoofer’s power cable into a wall outlet. When the center unit is turned on, the center unit and subwoofer are automatically connected via wireless connection. Once the connection has been successfully established, the STATUS indicator on the subwoofer glows as shown in the illustration below, and the unit is ready for playback.

- If the STATUS indicator does not glow properly the first time the unit is turned on, pair the center unit and subwoofer manually. See “Pairing the center unit and subwoofer” (p. 105).

If there is no sound coming from the subwoofer, or if sound is intermittent, due to the influence of radio waves from other devices, connecting the center unit and subwoofer via cables will solve the problem. Connect the center unit and subwoofer via an RCA mono cable and a 3.5 mm monaural mini plug cable. A 3.5 mm monaural mini plug cable is required to turn the center unit and subwoofer on and off at the same time.

To connect the center unit and subwoofer using a wired connection, set “Bass Out” of “Subwoofer” in the setup menu to “Wired” (p. 76).

When the center unit is turned on, the subwoofer turns on and its STATUS indicator glows green.

- Be sure the center unit is turned off before connecting the subwoofer.
- The subwoofer supplied with the unit can only be connected.
Visual operation of this unit is possible by displaying its menu screen on the TV.

Turn on the unit and the TV, and then use the input button on the TV's remote control to switch input so that video input from this unit is displayed.

When this unit and the TV are connected as shown below, select “HDMI 1” using the TV's remote control.

The setup menu (p. 69) can only be displayed on a TV screen. It cannot be shown in the front panel display.

The menu display
The menu is displayed on the TV screen when the SETUP ( ) key or OPTION (…) key is pressed. When the TV is receiving HDMI signals, the menu is superimposed over video content. Press the SETUP ( ) key or OPTION (…) key a second time to cancel menu display.

• The setup menu (p. 69) can only be displayed on a TV screen. It cannot be shown in the front panel display.
Initial screen display
When the unit is turned on for the first time after purchase, the screen below will be displayed. (“ViewScreen” is shown in the front panel display.)

Selecting a language for menu display

1. Turn the unit and TV on.
2. Switch the TV’s input to display video input from this unit (p. 30).
3. Press and hold the SETUP ( ) key until the “OSD Language” menu appears on the TV.

Press the SETUP ( ) key to exit the setup menu.

When the menu is not displayed
- Confirm the following cases.
  - The HDMI input jack of your TV and the HDMI OUT (ARC) jack of the unit are connected.
  - The input of your TV is set to “HDMI 1” (example).

4. Use the ▲/▼ key to select the desired language and press the ENTER key.

   Settings
   日本語, ENGLISH (default), DEUTSCH, FRANÇAIS, ESPAÑOL, ITALIANO, NEDERLANDS, РУССКИЙ, SVENSKA, ТЮРК

5. Press the SETUP ( ) key to exit the setup menu.
Auto setup for appropriate surround effects (IntelliBeam)

First use the "IntelliBeam" function to adjust each channel so that this unit provides the optimal viewing and listening environment.

1. The AUTO SETUP procedure may not be run successfully if this unit is installed in one of the rooms described in “Unrecommended listening environments” (p. 16). The My Surround function can be used to enjoy rich surround sound in these types of rooms as well. See “Channel Out” (p. 75) for more information.

2. Do not connect the IntelliBeam microphone to an extension cable as doing so may result in an inaccurate sound optimization.

Installing the IntelliBeam microphone

1. Assemble the supplied cardboard microphone stand, and then position the IntelliBeam microphone.

2. Position the supplied cardboard microphone stand and IntelliBeam microphone at your listening position.

• Position the IntelliBeam microphone at the same height as your ears would be when you are seated.
• Position the IntelliBeam microphone so that it is parallel with the floor.
• A camera tripod or stool may also be used instead of the supplied cardboard microphone stand.

3. Make sure that there are no obstacles between the IntelliBeam microphone and the walls in your listening room as these objects obstruct the path of sound beams. However, any objects that are in contact with the walls will be regarded as a protruding part of the walls.
**Using AUTO SETUP (IntelliBeam)**

- Test tones output during measurement are loud. Perform AUTO SETUP when no children are around and there is no possibility of their entering the listening room, as their hearing may be impaired.
- If there are curtains in your listening room, we recommend following the procedure below.
  1. Open the curtains to improve sound reflection.
  2. Run “Beam optimize only” (p. 35).
  3. Close the curtains.
  4. Run “Sound optimize only” (p. 35).
- Make sure that your listening room is as quiet as possible. For accurate measurement, turn off air conditioner or other devices that make noises.

1. **Turn the unit and your TV on.**

2. **Switch TV input to the input jack (HDMI 1, etc.) to which this unit is connected (p. 30).**

3. **Connect the IntelliBeam microphone to the INTELLIBEAM MIC jack on the rear panel of the unit.**

   ![IntelliBeam microphone](image)

   - **IntelliBeam microphone**
   - **Cardboard microphone stand**

   The screen below is displayed after connecting IntelliBeam microphone to the unit.

   ![AUTO SETUP](image)

   “AUTO SETUP” in the “IntelliBeam” menu can automatically adjust the following two settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beam optimize only</td>
<td>This feature optimizes the beam angle so that the parameter best matches your listening environment.</td>
</tr>
<tr>
<td>Sound optimize only</td>
<td>This feature optimizes sound quality for each channel by measuring the acoustic characteristics of the listening environment.</td>
</tr>
</tbody>
</table>

   “Beam optimize only” or “Sound optimize only” can be measured separately in the setup menu (p. 35).

   - **Follow the instructions below and then leave the room. If you remain in the room, you may obstruct the beam, or the microphone may pickup any sounds you make, possibly resulting in improper measurement.**
4 Press the ENTER key to start the AUTO SETUP procedure and then leave the room within 10 seconds.

If the AUTO SETUP procedure is complete, this unit rings the chimes.

- The AUTO SETUP procedure takes about 3 minutes.
- To cancel the AUTO SETUP procedure after it is started, or if you do not want to apply the results, press the RETURN ( ) key.
- If an error occurs, an error buzzer sounds and an error message is displayed. For details on error messages, see “If an error message is displayed” (p. 36).

5 Press the ENTER key.

The measurement results are applied and saved in the unit.

- You can save several measurement results by pressing the SYSTEM MEMORY 1, 2, or 3 key.
  When the SYSTEM MEMORY 1 key is pressed, “M1 Saving” is displayed, and settings are saved.
  If ambient noise is picked up after measurement begins, an error message is displayed in the “AUTO SETUP COMPLETE” screen prompting you to begin measurement again. Press the ENTER key to exit the error message screen, and begin measurement again.

- See page 46 for more information on the system memory function.

6 Remove the IntelliBeam microphone.

The “AUTO SETUP COMPLETE” screen closes.

The IntelliBeam microphone is sensitive to heat, so should not be placed anywhere where it could be exposed to direct sunlight or high temperatures (such as on top of AV equipment).
- **AUTO SETUP via the setup menu**
  "Beam optimize only" or "Sound optimize only" can be measured separately in the setup menu.

1. **Place the IntelliBeam microphone at your normal listening position, and press the SETUP (.Setup) key.**
   See “Installing the IntelliBeam microphone” (p. 32) for instructions on positioning the IntelliBeam microphone.

2. **Press the ▲/▼ key to select “Beam” and then press the ENTER key.**

3. **Press the ▲/▼ key to select “IntelliBeam” and then press the ENTER key.**

4. **Press the ▲/▼ key to select one of the items below and then press the ENTER key.**

   **Settings**
   - **Beam+Sound optimize**
     Select this optimization feature if you make settings for the first time. This menu takes about 3 minutes.
   - **Beam optimize only**
     Use to optimize the beam angle so that the parameter best matches your listening environment. This menu takes about 1 minute.
   - **Sound optimize only**
     Use to optimize the beam delay, volume, and quality so that the parameters best match your listening environment. This menu takes about 2 minutes.
     You must optimize the beam angle with “Beam optimize only” before starting “Sound optimize only”. Select this optimization feature in the following cases:
     - If you have opened or closed the curtains in your listening room before using this unit
     - If you have manually set the beam angle with “Beam optimize only”.

5. **Connect the IntelliBeam microphone to this unit after “AUTO SETUP (PREPARATION & CHECK)” screen is displayed.**
   For details on connecting IntelliBeam microphone, refer to “Using AUTO SETUP (IntelliBeam)” (p. 33).

6. **Follow steps 4, 5, and 6 under “Using AUTO SETUP (IntelliBeam)” to configure settings, and then remove the microphone.**

   • When the AUTO SETUP procedure is performed from the setup menu, the menu selection screen of the setup menu appears. Press the SETUP (Setup) key to exit the setup menu.
If an error message is displayed

If an error message is displayed on the TV screen, see "Error messages" below to determine the cause and resolve the problem. Follow the instructions displayed on the TV screen to begin measurement again.

Error messages

<table>
<thead>
<tr>
<th>Error message</th>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>ERROR E-1</td>
<td>Please test in quieter environment.</td>
<td>There is too much noise in your listening room.</td>
</tr>
<tr>
<td>ERROR E-2</td>
<td>No MIC detected. Please check MIC connection and re-try.</td>
<td>The IntelliBeam microphone is disconnected.</td>
</tr>
<tr>
<td>ERROR E-3</td>
<td>Unexpected control is detected. Please re-try.</td>
<td>Some other operations were performed on this unit.</td>
</tr>
<tr>
<td>ERROR E-4</td>
<td>Please check MIC position. MIC should be set in front of Sound Projector. Please re-try.</td>
<td>The IntelliBeam microphone is not placed in front of this unit.</td>
</tr>
<tr>
<td>ERROR E-5</td>
<td>Please check MIC position. MIC should be set above 1.8m/6.0ft and re-try.</td>
<td>The IntelliBeam microphone is not placed in the right distance from this unit.</td>
</tr>
<tr>
<td>ERROR E-6</td>
<td>Volume level is lower than expected. Please check MIC position/connection and re-try.</td>
<td>The IntelliBeam microphone cannot collect the sound produced by this unit.</td>
</tr>
<tr>
<td>ERROR E-7</td>
<td>Unexpected error happened. Please turn off and re-try.</td>
<td>An internal system error occurred.</td>
</tr>
<tr>
<td>ERROR E-9</td>
<td>Please check the connection with subwoofer.</td>
<td>The subwoofer is not connected properly.</td>
</tr>
</tbody>
</table>
Operating the unit by TV’s remote control (HDMI control)

What is the HDMI control function?
The HDMI control function (link function) coordinates operation of a TV and the unit so that the unit can be operated using the TV's remote control. When a TV is connected to the unit with an HDMI cable, the TV's remote control can be used to perform the following operations.

Coordinated functions via the TV remote control

1. Turn on/off
   Both the TV and this unit turn on/off at the same time.

2. Switch input sources
   - The unit's input source switches accordingly when the TV's input source is switched.
   - Examples
     - When a TV program is selected on the TV, the unit's audio input source is switched to the HDMI OUT (ARC) jack using the ARC function or TV input jack.
     - When a BD/DVD player is connected to the HDMI IN 1 jack on the unit, the unit's input source switches to HDMI 1 when the BD/DVD player is selected with the TV's remote control.
   - The input source can be switched while the unit is off.

3. Switch the audio output device
   (TV or this unit (amplifier))

4. Adjust volume
   This unit’s volume can be adjusted when the TV’s audio output is set to this unit (amplifier).

In addition to the functions in the left column, the unit’s menus displayed on the TV can be operated with some TV.

- ▶ If, after several attempts, you are unable to operate the unit with your TV’s remote control, change the HDMI control setting for the unit, the TV, and any playback devices (p. 38).

• Even if your TV supports the HDMI control function, some functions may not be available. For details, refer to documentation supplied with your TV.
• We suggest using devices (TV, BD/DVD player, etc.) from the same manufacturer.
Changing the HDMI control function

If you are unable to operate the unit with your TV’s remote control, configure the HDMI control function as follows.

1. Turn on the unit, TV, and playback devices.

2. Enable the HDMI control function on the unit, TV, and playback devices such as BD/DVD players that support this function.
   - For this unit, confirm that “HDMI Control” is set to “On” (default setting) (p. 80).
   - Enable the HDMI control function on the TV and playback devices. Refer to documentation supplied with the TV or playback devices for details.

3. Turn off the main power of the TV and then turn off the unit and playback devices.

4. Turn on the unit and playback devices and then turn on the TV.

5. Switch TV input to the input jack (HDMI 1, etc.) to which this unit is connected.

6. Select HDMI 1–3 as an input source and confirm that the video of the playback device is displayed on the TV.
   - When the playback device is connected to the HDMI IN 1 jack, press the HDMI1 key.

7. Check that the unit is properly coordinated with the TV by turning off the TV or adjusting the TV volume with the TV remote control.

If devices are not coordinated

Confirm the settings are properly configured as described below.
- “HDMI Control” (p. 80) is set to “On” in the setup menu.
- The HDMI control function is enabled on the TV.

Examples of TV settings
- From the setup menu on your TV, select “Link setting” → “HDMI control setting”, then set a setting such as “HDMI control function” to “ON”.
- Set audio output to any option other than TV.
- Contact the manufacturer of your television for TV settings.

If devices fail to coordinate even after the settings described above have been applied correctly:
- Turn off this unit and the TV, and then turn them back on again.
- Disconnect the power cable of the unit and external devices connected to the unit via HDMI cable. Plug them in again after about 30 seconds.
- If devices fail to coordinate after TV, AUX1, or AUX2 is input, repeat steps 5 and 6 under “Changing the HDMI control function”.

Changing the connection method and connected devices

When changing connected devices, or the jacks via which devices are connected, reconfigure settings as follows.

1. Disable the HDMI control function of the TV and BD/DVD player, turn off all connected devices, and change the connections.

2. Perform steps 1 to 7 of “Changing the HDMI control function”.

Input source name

---

If you are unable to operate the unit with your TV’s remote control, configure the HDMI control function as follows.

1. Turn on the unit, TV, and playback devices.

2. Enable the HDMI control function on the unit, TV, and playback devices such as BD/DVD players that support this function.
   - For this unit, confirm that “HDMI Control” is set to “On” (default setting) (p. 80).
   - Enable the HDMI control function on the TV and playback devices. Refer to documentation supplied with the TV or playback devices for details.

3. Turn off the main power of the TV and then turn off the unit and playback devices.

4. Turn on the unit and playback devices and then turn on the TV.

5. Switch TV input to the input jack (HDMI 1, etc.) to which this unit is connected.

6. Select HDMI 1–3 as an input source and confirm that the video of the playback device is displayed on the TV.
   - When the playback device is connected to the HDMI IN 1 jack, press the HDMI1 key.

7. Check that the unit is properly coordinated with the TV by turning off the TV or adjusting the TV volume with the TV remote control.

If devices are not coordinated

Confirm the settings are properly configured as described below.
- “HDMI Control” (p. 80) is set to “On” in the setup menu.
- The HDMI control function is enabled on the TV.

Examples of TV settings
- From the setup menu on your TV, select “Link setting” → “HDMI control setting”, then set a setting such as “HDMI control function” to “ON”.
- Set audio output to any option other than TV.
- Contact the manufacturer of your television for TV settings.

If devices fail to coordinate even after the settings described above have been applied correctly:
- Turn off this unit and the TV, and then turn them back on again.
- Disconnect the power cable of the unit and external devices connected to the unit via HDMI cable. Plug them in again after about 30 seconds.
- If devices fail to coordinate after TV, AUX1, or AUX2 is input, repeat steps 5 and 6 under “Changing the HDMI control function”.

Changing the connection method and connected devices

When changing connected devices, or the jacks via which devices are connected, reconfigure settings as follows.

1. Disable the HDMI control function of the TV and BD/DVD player, turn off all connected devices, and change the connections.

2. Perform steps 1 to 7 of “Changing the HDMI control function”.

Input source name
1 Press the \( \odot \) key to turn on this unit.
   It may take a few seconds for sound to play from the center unit and subwoofer after the unit is turned on.

2 Turn on devices (TV, BD/DVD player, game console, etc.) connected to this unit.

3 Select a device by pressing the input selector key or NET key corresponding to the connection of external devices.
   Press the HDMI1 key to play audio/video content from a BD/DVD player connected via the HDMI IN1 jack.

   For playback from a Bluetooth device, refer to p. 47. For audio playback via a network, refer to p. 62 to 68.

4 Play back a device selected in step 3.

5 Press the VOL (+/-) key to adjust the volume. Press the SUB (+/-) key to adjust the volume of the subwoofer.
   - When audio is output from both TV speaker and this unit, mute the TV sound.
   - When sound input to HDMI IN jack is output from the TV, the volume level does not change even if you press the VOL (+/-) key or the MUTE ( \( \mathbb{O} \) ) key.
   - To mute the sound, press the MUTE ( \( \mathbb{O} \) ) key. “MUTE ON” is shown in the front panel display. To resume the volume, press the MUTE ( \( \mathbb{O} \) ) key again or press VOL (+/-) key. When the MUTE ( \( \mathbb{O} \) ) key is pressed, “MUTE OFF” is shown in the front panel display.

   - The subwoofer volume can be adjusted separately from the whole volume.
   - Lowering the subwoofer volume is recommended at night.

6 Select surround playback, stereo playback, or target playback mode, and configure sound setting according to your preferences (p. 40).

You can also select an input source with the MusicCast CONTROLLER app installed on your mobile device (p. 50).

You can also adjust the volume with the MusicCast CONTROLLER app installed on your mobile device (p. 50).
Enjoying sound based on your preference

This unit supports the following capabilities to enjoy sound based on your preference.

- Surround playback mode (p. 40)
- CINEMA DSP (p. 41)
- Stereo playback mode (p. 42)
- Target playback mode (p. 42)
- Compressed Music Enhancer (p. 43)
- CLEAR VOICE (p. 43)
- Volume adjustment for each channel (p. 43)

Playback with surround sound

5-channel sound beams create a sound field for surround sound playback.

1 Press the SURROUND key to switch to surround mode.

“SURROUND” is shown in the front panel display.

- Configuring Channel Out settings (p. 75) in the setup menu allows for more precise configuration of beam settings in accordance with the audio source and listening room setup.
Enjoying three-dimensional surround sound (CINEMA DSP)

Select the desired CINEMA DSP program according to the audio source and your preferences. Yamaha’s exclusive sound field reproduction technology (CINEMA DSP) easily reproduces realistic sound fields comparable to those found in movie theaters and concert halls, allowing users to enjoy a natural and three-dimensional listening environment.

1 Press the CINEMA DSP (MOVIE, MUSIC, or ENTERTAINMENT) key repeatedly to select the desired program.
   The CINEMA DSP program name appears in the front panel display.

- The CINEMA DSP programs are not available in the following conditions.
  - In stereo playback mode (p. 42) or target playback mode (p. 42)
  - Audio signals with sampling frequency of higher than 48 kHz are being played.
  - My Surround function is used (p. 76).
- This unit memorizes a program assigned to each input source. When you select another input, the unit automatically recalls the last program for the selected input.

CINEMA DSP options

MOVIE (use the MOVIE key to select)

<table>
<thead>
<tr>
<th>Sci-Fi</th>
<th>This program clearly reproduces dialogs and special sound effects of the latest science fiction films and lets you feel a broad and expansive cinematic space.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adventure</td>
<td>This program reproduces the thrilling environment of the latest action films and lets you feel the dynamic and excitement of fast-moving scenes.</td>
</tr>
<tr>
<td>Spectacle</td>
<td>This program reproduces the wide and grand environment and lets you have added impressions on spectacular scenes with strong visual impacts.</td>
</tr>
</tbody>
</table>

MUSIC (use the MUSIC key to select)

<table>
<thead>
<tr>
<th>Music Video</th>
<th>This program produces a vibrant environment and lets you feel as if you are at an actual jazz or rock concert.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Concert</td>
<td>This program creates a rich surround effect of a large round concert hall with a great deal of presence, emphasizing the extension of sounds, and lets you feel as if you are seated close to the center of the stage.</td>
</tr>
<tr>
<td>Jazz Club</td>
<td>This program recreates the acoustic environment of “The Bottom Line”, a famous jazz club in New York once and lets you feel as if you are seated right in front of the stage.</td>
</tr>
</tbody>
</table>

ENTERTAINMENT (use the ENTERTAINMENT key to select)

<table>
<thead>
<tr>
<th>Sports</th>
<th>This program reproduces the energetic environment of live sports broadcasting, converging a commentator’s voice on the center and broadening the overall atmosphere of the stadium, and lets you feel as if you are seated at an actual stadium or a ball park.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Talk Show</td>
<td>This program reproduces excitement of live talk shows. It enhances the ambience of gaiety while keeping the conversations at a comfortable volume.</td>
</tr>
<tr>
<td>Drama</td>
<td>This program stables reverberations that match a wide range of movie genres from serious dramas to musicals and comedies, and offers an optimum 3D feeling, reproducing effects tones and background music softly but cubically around clear words.</td>
</tr>
<tr>
<td>Game</td>
<td>This program is suitable for role-playing and adventure games. It utilizes the sound field effects for movies to represent the depth and spatial feeling of the field during play, while offering movie-like surround effects in the movie scenes in the game.</td>
</tr>
</tbody>
</table>

Playback without using CINEMA DSP (press the OFF key)

| DSP Off | CINEMA DSP is not used and audio content is played in surround mode. |
2-channel playback (stereo playback mode)

2-channel stereo playback using the right front and left front channels is enabled. When multi-channel audio signals are input, they are down-mixed to 2 channels.

1. Press the STEREO key to switch to stereo playback mode.

Delivering sound to a specified location (target playback mode)

Target playback mode outputs sound beams from a single channel for optimal listening from a specific position. Refer to the illustrations below.

For listening at low volumes, such as at night

Disabling target playback mode

Press the SURROUND key or STEREO key to turn target playback mode off.

- The CINEMA DSP programs are not enabled in target playback mode.
- Bass output is controlled to prevent sounds from spreading in other directions.
Playing back digitally compressed formats (such as MP3, etc.) with enriched sound (Compressed Music Enhancer)

Play back digitally compressed formats such as MP3, with emphasis on bass and treble for extended dynamic sounds.

1 **Press the ENHANCER key to turn on the Compressed Music Enhancer function.**
   Press the key again to turn off the function.

- Compressed Music Enhancer is disabled when digital audio signal with a sampling rate greater than 48 kHz is input.
- By default, this function is set to "ON" when the input source is Bluetooth. It is set to "OFF" with any other input source.
- This unit memorizes the “ON” or “OFF” setting assigned to each input source. When you select another input, the unit automatically recalls the last setting for the selected input.

Clear playback of human voices (CLEAR VOICE)

Human voices, such as lines in movies and TV shows, or news and sports commentary, are played back very clearly.

1 **Press the CLEAR VOICE key to turn on the CLEAR VOICE function.**
   Press the key again to turn off the function.

Adjusting volume for each channel

Adjust the volume of playback for each channel (audio in each direction) so that sounds are evenly distributed in their respective directions.

- Refer to “Channel Level” (p. 77) when adjusting the volume of each channel with the test sound.

1 **Hold down the CH LEVEL key for more than 3 seconds.**

2 **Press the CH LEVEL key to select the channel.**
   - FL: Front left
   - FR: Front right
   - C: Center
   - SL: Surround left
   - SR: Surround right
   - SUB: Subwoofer

- Adjusting the channel level is not available in target playback mode.
- SUB (subwoofer) volume can only be adjusted in stereo playback mode (p. 42).
- Volume for the following channels can be adjusted when “My Surround” is set to “On” (p. 76).
   - SL/SR: Surround (left/right)
   - C: Center
   SL/SR: Surround (left/right)
   SUB: Subwoofer

3 **Press the ▲/▼ key to adjust the volume.**
   Adjustable range: -20 to +20

Examples of volume balance adjustment

- If you have problems hearing words: Select C (center) to increase the level.
- When the sound is not like surround sound: Select SL (surround left) or SR (surround right) to increase the level.
- The volume of the subwoofer can also be adjusted by using the SUB (+/-) key.
Adjusting tones

Use the option menu to adjust the level at which high (treble) and low (bass) tones are output while listening to sound. Tones can be set for each of the following input sources:
HDMI 1–3, TV, AUX 1–2, Bluetooth, NET

- The option menu is displayed on, and operated from, the TV screen or front panel display. This section uses illustrations of the front panel display as examples.

1. Press the OPTION (…) key.

2. Press the ▲/▼ key to select “TREBLE” or “BASS”, and press the ENTER key.

3. Press the ▲/▼ key to adjust the output level. The adjustable range is -12 to +12 (default: 0).

4. Press the ◀ key.

5. Repeat steps 2 and 3 to adjust the output level for treble and bass.

6. Press the OPTION (…) key to exit the option menu.
Using useful features

Saving energy with the Eco function

Using the Eco function to reduce the amount of power consumed by this unit.
When this function is enabled, the brightness of the front panel display is minimized and the maximum volume is reduced.

1. **Press the ECO key.**
   - “ECO ON” is displayed and the front panel display turns off.

   ![ECO ON](image)

   The brightness of STATUS indicator is minimized.

Disabling the Eco function

Press the ECO key.
“ECO OFF” is displayed in the front panel display.

- Disable this function for louder playback.
- When this function is enabled, “Dimmer” in the setup menu (p. 85) and “MAX VOLUME” in the advanced setup menu (p. 89) cannot be configured.

Switching information displayed in the front panel display

Information regarding the input source, surround sound, and subwoofer is displayed.

1. **Press the INFO (ि) key.**
   - Display changes as follows each time the INFO (ि) key is pressed. The information varies according to the input source.
Saving this unit’s settings to system memory

Three sets of settings can be saved to this unit’s memory, enabling quick loading of settings optimized for specific listeners or environmental changes as needed. Refer to the examples below to save IntelliBeam measurement results and settings such as surround setting to system memory, or to load a pre-defined settings.

Example 1  Saving the IntelliBeam measurements for different environments to system memory
If materials that absorb sound, such as curtains, obstruct sound beams, the effectiveness of those beams decreases. Measure with the curtains open and again with them closed. Save both sets of settings to SYSTEM MEMORY 1 and 2, and load the appropriate settings as needed.

Example 2  Saving frequently used settings to system memory
SYSTEM MEMORY 1: Surround setting
SYSTEM MEMORY 2: A target playback mode setting that projects sound beams toward the kitchen
SYSTEM MEMORY 3: A target playback mode setting that projects sound beams toward the living room

Example 3  Saving preferred listener settings to system memory
SYSTEM MEMORY 1: Settings configured for Dad
SYSTEM MEMORY 2: Settings configured for Mom
SYSTEM MEMORY 3: Settings configured for parties

The following settings can be saved to system memory.
• IntelliBeam measurement results (p. 33)
  See page 35 for instructions on saving measurement results for IntelliBeam.
  (When “Horizontal Angle”, “Beam Travel Length”, “Focal Length”, “Image Location”, and “Channel Level” are configured in the setup menu (p. 69), these settings are applied to IntelliBeam’s AUTO SETUP measurements.)

• Surround playback (p. 40), stereo playback (p. 42), or target playback mode (p. 42)
  (The Channel Out settings (p. 75) can also be saved for surround playback mode.)
• Surround: CINEMA DSP (p. 41)
• Tone control (p. 44)
• Subwoofer settings (p. 76)

Saving settings to system memory

1  Hold down the SYSTEM MEMORY 1, 2, or 3 key until “M1 Save?”, “M2 Save?”, or “M3 Save?”, corresponding to the button pressed, is displayed.

2  Press the same SYSTEM MEMORY key again.
  When the SYSTEM MEMORY 1 key is pressed, “M1 Saving” is displayed, and settings are saved.

Saving settings to system memory

1  Hold down the SYSTEM MEMORY 1, 2, or 3 key until “M1 Save?”, “M2 Save?”, or “M3 Save?”, corresponding to the button pressed, is displayed.

2  Press the same SYSTEM MEMORY key again.
  When the SYSTEM MEMORY 1 key is pressed, “M1 Saving” is displayed, and settings are saved.

If system settings are already stored in the selected memory number, this unit overwrites the old settings.

If “MEMORY PROTECT” is set to “ON” in the advanced setup menu (p. 89), the memory function cannot be set.

Loading settings

1  Press the SYSTEM MEMORY 1, 2, or 3 key corresponding to settings to be loaded.
  If the SYSTEM MEMORY 1 key is pressed, “M1 Load?” will be displayed.

2  Press the same SYSTEM MEMORY key again.
  When the SYSTEM MEMORY 1 key is pressed, “M1 Loading” is displayed, and settings are loaded.
Wireless playback of audio via Bluetooth connection

The unit can be used to receive and play audio from a Bluetooth device, and to transmit audio for playback on a Bluetooth device.

See documentation supplied with your Bluetooth device for more information.

- Receiving audio from a Bluetooth device

Audio from a Bluetooth device, such as a mobile device or a digital music player, can be played over a wireless connection.

- Transmitting audio to a Bluetooth device

Use Bluetooth wireless headphones and the like to listen to audio.

Note:
- Audio cannot be received by the unit from mobile devices and the like, and transmitted to speakers or headphones at the same time.
- “Bluetooth” in the setup menu must be set to “On” (default: p. 81) to use Bluetooth functions.
- A Bluetooth device that has been assigned a passkey (PIN) other than “0000” cannot be connected to the unit.
- Be sure that the Bluetooth device is no farther than 10 m (33 ft) from the unit when connecting the two.
- Refer to “Bluetooth” (p. 98) in “Troubleshooting” if a Bluetooth connection cannot be established.
- Adjust the Bluetooth device’s volume as needed.
Listening to music from a Bluetooth device (Receiving)

1 Press the $ key on the remote control.
   Bluetooth is selected as an input source, and “BLUETOOTH” is shown in the front panel display.

   • If a Bluetooth device has been connected before, the unit will connect to the last connected device when the $ key is pressed. Terminate this connection to connect a new device.

2 Turn on the Bluetooth function on the Bluetooth device.
   The operation varies depending on the device. Refer to documentation supplied with the device.

3 Select “YSP-2700”* in the Bluetooth device list on the device.
   • If the unit is registered as a MusicCast-enabled device (p. 50), the room name (network name) is displayed.
   If a passkey (PIN) is required, enter the number “0000”.

   The $ indicator on the unit’s front panel display flashes while the unit and Bluetooth device are being connected, and glows steadily when the connection is established.

   • With some Bluetooth devices, this unit must be specified as the destination for audio output.
   • Setting “Network Standby” in the setup menu to “On” allows the unit to be turned on and off with Bluetooth device operations (p. 84).

4 Play back a song on the Bluetooth device.
   “Connect” is shown in the front panel display.
   The $ indicator or a completion message is displayed on the Bluetooth device.

Terminating Bluetooth connection
   Perform one of the following operations to terminate Bluetooth connection.
   The $ indicator on the unit’s front panel turns off when the connection is terminated.
   • Turn off the Bluetooth function on the Bluetooth device.
   • Press the $ key for more than 3 seconds.
   • Switch the unit’s input source to any input source other than Bluetooth.
   • Turn off the unit.

   • When Bluetooth connection is terminated, “Disconnect” is shown in the front panel display.
Listening to audio through Bluetooth speakers or headphones (transmitting)

- Music input using AirPlay cannot be output to Bluetooth devices.
- The MusicCast CONTROLLER app installed on your mobile device (p. 50) can also be used to transmit audio to a Bluetooth device.

1. **Turn on the Bluetooth device.**
2. **Select the input source (other than Bluetooth) with the input selector keys.**
   - If a Bluetooth device has been connected before, the unit will connect to the last connected device when the input source is selected in step 2. Terminate this connection to connect a new device.
3. **Press the SETUP ( ) key.**
   The setup menu is displayed on the TV screen.
4. **Use the ▲/▼ keys to select “Bluetooth”, and then press the ENTER key.**
5. **Use the ▲/▼ keys to select “Transmission”, and then press the ENTER key.**
6. **Use the ▲/▼ keys to select “On”, and then press the ENTER key.**
7. **Use the ▲/▼ keys to select “Device Search”, and then press the ENTER key.**
8. **Use the ▲/▼ keys to select a Bluetooth device, and then press the ENTER key.**
   - The $ indicator in the front panel display flashes while the unit and Bluetooth device are being connected, and glows steadily when the connection is established.
9. **Play an audio source, and enjoy music via the Bluetooth device.**
   - “Not found” is displayed on the screen with step 8 if the unit was unable to find a device to which to connect.
   - “No Device Name” replaces the device name on the screen with step 8 if the unit is unable to recognize the name of the device.
   - Audio will also be output from the unit.

### Terminating Bluetooth connection

Perform one of the following operations to terminate Bluetooth connection.

- The $ indicator on the unit’s front panel turns off when the connection is terminated.
- Terminate Bluetooth connection from the Bluetooth device, or turn off the Bluetooth device.
- Set “Transmission” in the setup menu to “Off”.
- Turn off the unit.
A network connection allows you to listen to Internet radio stations or music streaming services, and to use AirPlay to play music files, or to play music files stored on your computer (media server) via this unit.

Most playback requires the “MusicCast CONTROLLER” app for mobile devices. Install and use the MusicCast CONTROLLER app on your mobile device to play music files.

To use network function, the unit, your PC and mobile device must be connected to the same router. Make sure whether the network parameters (such as the IP address) are properly assigned to the unit in “Information” (p. 82) in the setup menu.

When using a multiple SSID router, access to the unit might be restricted depending on the SSID to connect. Connect the unit and mobile device to the same SSID.

Some security software installed on your computer, or network device settings (such as a firewall), may block the unit’s access to your computer or Internet radio stations. Should this occur, change security software and/or network device settings.

A network connection cannot be established if the MAC address filter on your router is enabled. Check your router’s settings.

To configure your router’s subnet mask manually, apply the same subnet used by this unit to all devices.

Use of a broadband connection is recommended when using Internet services.

If your router supports DHCP, network settings for the unit need not be configured. Network parameters (such as the IP address) will be assigned automatically. If your router does not support DHCP, or if you prefer to configure network parameters manually, you must configure network settings yourself (p. 83).

You can verify that network parameters (such as the IP address) have been properly assigned to the unit by selecting “Information” (p. 82) from the setup menu.

Connecting with the MusicCast CONTROLLER app (registering the unit as a MusicCast-enabled device)

Install the MusicCast CONTROLLER app on your mobile device to connect the unit to a network and register it as a MusicCast-enabled device.

1. Install the MusicCast CONTROLLER app on your mobile device, and open the app.
2. Search for “MusicCast CONTROLLER” on the App Store or Google Play.
2 Tap “Setup”.

3 Turn on the unit, and then tap “Next”.

4 Hold down the CONNECT key on the unit until “CONNECT” is displayed on the front panel display, and tap “Next”.

- When a screen like that below is displayed, follow the on-screen instructions to configure network settings.

  1. Use the Home button on your mobile device to return to the Home screen.
  2. Select “Wi-Fi” from “Settings”.
  3. Select “MusicCastSetup” from “CHOOSE A NETWORK...”.
  4. Use the Home button to return to the MusicCast CONTROLLER app.

- When a screen like that at left below is displayed, select the network to which the unit will be connected and enter the router’s password.

  The router’s password is often noted on the router itself. Refer to documentation supplied with the router for details.
5 To register the unit as a MusicCast-enabled device, configure the following items.

- Location name (“home”, “John's house”, etc.)
- Name and photo of the room where the unit is installed

The location name, and the name and photo of the room where the unit is installed can be changed later.

To register the unit as a MusicCast-enabled device, configure the following items.

- Location name (“home”, “John's house”, etc.)
- Name and photo of the room where the unit is installed

The location name, and the name and photo of the room where the unit is installed can be changed later.

Network connection with the MusicCast CONTROLLER app is now complete, and the unit has been registered as a MusicCast-enabled device.

- If a different MusicCast-enabled device is already registered with the MusicCast CONTROLLER app, tap (Setup) in the room selection screen, and then select “Add New Device” to add the unit to the app.
Using connection methods other than the MusicCast CONTROLLER app (wireless network)

Use the setup menu on the unit to connect to a wireless network without using the MusicCast CONTROLLER app.
- Sharing the iOS device setting (p. 53)
- Using the WPS push button configuration (p. 54)
- Searching for a wireless router (access point) (p. 55)
- Setting up the wireless connection manually (p. 57)
- Using the WPS PIN code (p. 59)

- Once the unit has been connected to a wireless network using any of the methods described above, network settings will change when connection to a wireless network is established with the MusicCast CONTROLLER app.
- AirPlay is the only network function that can be used without the MusicCast CONTROLLER app.

Sharing the iOS device setting

You can easily setup a wireless connection by applying the connection settings on iOS devices (such as an iPhone). Before proceeding, confirm that your iOS device is connected to a wireless router (access point).

- You need iOS device with iOS 7 or later.
- The connection settings on iOS devices cannot be applied to the unit to establish a wireless connection if your wireless router (access point) uses WEP encryption. See “Searching for a wireless router (access point)” (p. 55) to establish a connection.

1. Press the key to turn on this unit.
2. Turn on the TV and switch the TV input to display video from the unit (HDMI OUT jack; p. 30).
3. Press the SETUP ( ) key.
   The setup menu is displayed on the TV screen.
4. Use the ▲/▼ keys to select “Network”, and press the ENTER key.
5. Use the ▲/▼ keys to select “Network Connection”, and press the ENTER key.
6. Use the ▲/▼ keys to select “Wireless (Wi-Fi)”, and press the ENTER key.
7. Use the ▲/▼ keys to select “Share Wi-Fi Settings (iOS)”, and press the ENTER key.
When the following screen is displayed, press the ENTER key.

“When the following screen is displayed, press the ENTER key.

The settings to be deleted (initialized) will be displayed. If you do not want to delete these settings, press the RETURN key to terminate the connection.

When the following screen is displayed, press the ENTER key.

Using the WPS push button configuration
A wireless connection can be established by pressing WPS button on the wireless router (access point).

Press the  key to turn on this unit.

Turn on the TV and switch the TV input to display video from the unit (HDMI OUT jack; p. 30).

Press the SETUP key.
The setup menu is displayed on the TV screen.

Use the ▲/▼ keys to select “Network”, and then press the ENTER key.

Use the ▲/▼ keys to select “Network Connection”, and then press the ENTER key.

Use the ▲/▼ keys to select “Wireless (Wi-Fi)”, and then press the ENTER key.

Display the Wi-Fi setup screen on the iOS device and select the unit from “SETUP A NEW AIRPLAY SPEAKER...”.

Follow the on-screen instructions displayed on the iOS device.
7 Use the ▲/▼ keys to select “WPS Button”, and then press the ENTER key.

8 Push the WPS button on the wireless router (access point).

When a connection has been established, “Completed” will be displayed on the TV screen.

If “Not connected” is displayed, press the ENTER key to repeat the procedure beginning with step 6, or see the information below to try another connection method.

- The WPS button cannot be used to establish a wireless connection if your wireless router (access point) uses WEP encryption, or if the router’s MAC address filter is enabled. See “Searching for a wireless router (access point)” (p. 55) to establish a connection.
- The WPS button cannot be used to establish a wireless connection if your wireless router (access point) is configured so that it does not broadcast its SSID. See “Setting up the wireless connection manually” (p. 57) to establish a connection.

9 Press the SETUP (ि) key to exit the setup menu.

Searching for a wireless router (access point)

Find and connect to a nearby wireless router (access point).

1 Press the ◎ key to turn on this unit.

2 Turn on the TV and switch the TV input to display video from the unit (HDMI OUT jack; p. 30).

3 Press the SETUP (ि) key.

The setup menu is displayed on the TV screen.

4 Use the ▲/▼ keys to select “Network”, and then press the ENTER key.

5 Use the ▲/▼ keys to select “Network Connection”, and then press the ENTER key.

6 Use the ▲/▼ keys to select “Wireless (Wi-Fi)”, and then press the ENTER key.

About WPS

WPS (Wi-Fi Protected Setup) is a standard established by the Wi-Fi Alliance, which allows easy establishment of a wireless home network.
7 Use the ▲/▼ keys to select “Access Point Scan”, and then press the ENTER key.

The list of available access points appears on the TV screen.

8 Use the ▲/▼ keys to select the desired access point and press the ENTER key.

The wireless connection setting screen appears on the TV.

9 Press the ENTER key.

10 Use the ◀/▶/▲/▼ and ENTER keys to enter the security key.

Once the security key been entered, select “OK”, and then press the ENTER key. The screen will return to that displayed in step 8.

11 Use the ▲/▼ keys to select “Connect” and press the ENTER key to start the connection process.

When a connection has been established, “Completed” will be displayed on the TV screen. If “Not connected” is displayed, press the ENTER key to repeat the procedure beginning with step 6, or see the information below to try another connection method.

12 Press the SETUP (_SETUP) key to exit the setup menu.

* "Access Point Scan" cannot be used to establish a wireless connection if your wireless router (access point) is configured so that it does not broadcast its SSID. See “Setting up the wireless connection manually” (p. 57) to establish a connection.
Setting up the wireless connection manually

Setup the SSID (network name), encryption method and security key for your network manually.

1. Press the \(\bigcirc\) key to turn on this unit.

2. Turn on the TV and switch the TV input to display video from the unit (HDMI OUT jack; p. 30).

3. Press the SETUP (\(\bigtriangledown\)) key.
   The setup menu is displayed on the TV screen.

4. Use the \(\Delta/\nabla\) keys to select “Network”, and then press the ENTER key.

5. Use the \(\Delta/\nabla\) keys to select “Network Connection”, and then press the ENTER key.

6. Use the \(\Delta/\nabla\) keys to select “Wireless (Wi-Fi)”, and then press the ENTER key.

7. Use the \(\Delta/\nabla\) keys to select “Manual Setting”, and then press the ENTER key.

8. Use the \(\Delta/\nabla\) keys to select “SSID”.

9 Use the \textless /\textgreater /\textuparrow /\textdownarrow keys and the ENTER key to enter the SSID of the access point.

Once the security key been entered, select “OK”, and then press the ENTER key. The screen will return to that displayed in step 8.

10 Use the \textuparrow /\textdownarrow keys to select “Security” and the \textless /\textgreater keys to select the encryption method.

Settings
None, WEP, WPA2-PSK (AES), Mixed Mode

• As communications are not encrypted when “None” is selected, selecting this option poses the risk that third parties may access the unit without your permission.

11 Use the \textuparrow /\textdownarrow keys to select “Security Key” and press the ENTER key.

• If you select “None” in step 10, this item is not available.

12 Use the \textless /\textgreater /\textuparrow /\textdownarrow and ENTER keys to enter the security key.

If you select “WEP” in step 10, enter either 5 or 13 character string, or 10 or 26 hexadecimal (base 16) keys.

If you select the method other than “WEP”, enter either 8 to 63 character string, or 64 hexadecimal (base 16) keys.

• Hexadecimal (base 16) keys use combinations of the numbers 0 through 9 and the letters a through f. Letters are not case sensitive.

13 Use the \textuparrow /\textdownarrow keys to select “Connect” and press the ENTER key to start the connection process.

When a connection has been established, “Completed” will be displayed on the TV screen.

If “Not connected” is displayed, press the ENTER key to repeat the procedure beginning with step 6.

14 Press the SETUP ( ) key to exit the setup menu.
Using the WPS PIN code

Register the unit’s PIN code with your wireless router (access point) to establish a connection. This procedure applies if your wireless router (access point) supports the WPS PIN feature.

1. Press the \( \bigcirc \) key to turn on this unit.

2. Turn on the TV and switch the TV input to display video from the unit (HDMI OUT jack; p. 30).

3. Press the SETUP (\( \bigcirc \)) key.
   The setup menu is displayed on the TV screen.

4. Use the \( \Delta / \nabla \) keys to select “Network”, and then press the ENTER key.

5. Use the \( \Delta / \nabla \) keys to select “Network Connection”, and then press the ENTER key.

6. Use the \( \Delta / \nabla \) keys to select “Wireless (Wi-Fi)”, and then press the ENTER key.

7. Use the \( \Delta / \nabla \) keys to select “PIN Code”, and then press the ENTER key.

   The list of available access points appears on the TV screen.

8. Use the \( \Delta / \nabla \) keys to select the desired access point and press the ENTER key.
   The PIN code of the unit appears on the TV screen.

9. Enter the unit’s PIN code into the wireless router (access point).
   For details on settings, refer to documentation supplied with the wireless router (access point).

10. Press the ENTER key to start the connection process.
    When a connection has been established, “Completed” will be displayed on the TV screen.
    If “Not connected” is displayed, press the ENTER key to repeat the procedure beginning with step 6, or see the information below to try another connection method.

   • The PIN code cannot be used to establish a wireless connection if your wireless router (access point) uses WEP encryption, or if the router’s MAC address filter is enabled. See “Searching for a wireless router (access point)” (p. 55) to establish a connection.

11. Press the SETUP (\( \bigcirc \)) key to exit the setup menu.
Connecting a mobile device to the unit directly (Wireless Direct)

Connect a mobile device directly to the unit without using a wireless router (access point).

Wireless Direct supports the following.
- Operation of the unit using a mobile device to which the dedicated MusicCast CONTROLLER app has been installed.
- Use of AirPlay to play music files stored on an iOS device.

1. Press the \(\bigcirc\) key to turn on this unit.
2. Turn on the TV and switch the TV input to display video from the unit (HDMI OUT jack; p. 30).
3. Press the SETUP (\(\bigcirc\)) key.
   The setup menu is displayed on the TV screen.

4. Use the \(\uparrow/\downarrow\) keys to select “Network”, and then press the ENTER key.
5. Use the \(\uparrow/\downarrow\) keys to select “Network Connection”, and then press the ENTER key.
6. Use the \(\uparrow/\downarrow\) keys to select “Wireless Direct”, and then press the ENTER key.
7. Use the \(\uparrow/\downarrow\) keys to select “Security” and the \(\leftarrow/\rightarrow\) keys to select the encryption method.

   **Settings**
   None, WPA2-PSK (AES)

   In most cases, “WPA2-PSK (AES)” should be selected. If your mobile device does not support “WPA2-PSK (AES)”, select “None”.

   • As communications are not encrypted when “None” is selected, selecting this option poses the risk that third parties may access the unit without your permission.
8. Use the \(\uparrow/\downarrow\) keys to select “Security Key” and press the ENTER key.
   • If you select “None” in step 7, this item is not available.
9 Use the ◀/▶/▲/▼ and ENTER keys to enter the security key.
Enter either 8 to 63 character string, or 64 hexadecimal (base 16) keys.

- Hexadecimal (base 16) keys use combinations of the numbers 0 through 9 and the letters a through f. Letters are not case sensitive.

Once the security key been entered, select “OK”, and then press the ENTER key. The screen below will be displayed.

10 Use the ▲/▼ keys to select “Save” and press the ENTER key to save the setting.
This completes the settings and “Set the mobile device.” will be displayed on the TV screen. The unit functions as an access point.

11 Configure the Wi-Fi settings of a mobile device.
For details on settings of your mobile device, refer to documentation supplied with the mobile device.

1. Enable the Wi-Fi function on the mobile device.
2. Select the SSID displayed in step 9 from the list of available access points.
3. When you are prompted for a password, enter the security key displayed in step 9.

12 Press the SETUP ( ) key to exit the setup menu.
Playing back music stored on media servers (PCs/NAS)

You can play back music files stored on your PC or DLNA-compatible NAS via the unit.

⚠️ The audio may be interrupted while using the wireless network connection. In this case, use the wired network connection.

* Linear PCM format only

⚠️ To play back FLAC files stored on a PC or NAS, you need to install server software that supports sharing of FLAC files via DLNA on your PC or use a NAS that supports FLAC files.

⚠️ Digital Rights Management (DRM) contents cannot be played back.

Media sharing setup

To play back music files stored on your PC or DLNA-compatible NAS, first you need to configure the media sharing setting on each music server.

For a PC with Windows Media Player installed

This unit supports Windows Media Player 11 or later. This section explains Windows Media Player 12 setup as an example.

⚠️ Operation may vary depending upon your PC or settings. Refer to documentation provided by your PC’s manufacturer or Windows Media Player Help for details.

1. Start Windows Media Player 12 on your PC.
2. Select “Stream”, then “Turn on media streaming”.
3. Click “Turn on media streaming”.
4. Select “Allowed” from the drop-down list next to the unit’s model name.
5. Click “OK” to exit.

For a PC or a NAS with other DLNA server software installed

Refer to documentation supplied with the device or software and configure the media sharing settings.
Playing music files

Use the MusicCast CONTROLLER app installed on your mobile device to play music files.

- Register the unit as a MusicCast-enabled device (p. 50) before playing music files.

1. Use the MusicCast CONTROLLER app to select the unit's room (Room1, etc.).

2. Tap 📱 (Server).

3. Follow the on-screen instructions to select a song.
Listening to Internet radio

You can listen to Internet radio stations from all over the world.

⚠️
- You may not be able to receive some Internet radio stations.
- The unit uses the vTuner Internet radio station database service. This service may be discontinued without notice.

Playback of Internet radio

Use the MusicCast CONTROLLER app installed on your mobile device to select an Internet radio station.

⚠️
- Register the unit as a MusicCast-enabled device (p. 50) before listening to Internet radio.

1. Use the MusicCast CONTROLLER app to select the unit’s room (Room1, etc.).
2. Tap 📻 (Net Radio).
3. Select a station from “Locations”, “Genres”, etc.

Registering favorite Internet radio stations

Internet radio stations can be assigned to the NET RADIO keys on the remote control, or they can also be bookmarked with the MusicCast CONTROLLER app.

assigning a station to a net radio key

1. Select the desired Internet radio station.
2. Press and hold one of the NET RADIO 1, 2, or 3 key for at least 3 seconds.

Tuning into assigned Internet radio stations

1. Press the NET RADIO 1, 2, or 3 key to which the desired Internet radio station has been assigned.
   “NET RADIO” is shown in the front panel display, and streaming begins.

- When an Internet radio station is assigned to the NET RADIO 1, 2, or 3 key on the remote control, the same station is also registered with No. 1, 2, or 3 in the MusicCast CONTROLLER app’s “Favorites”. When an Internet radio station is registered with No. 1, 2, or 3 in “Favorites” with the MusicCast CONTROLLER app, the same station is also assigned to the NET RADIO 1, 2, or 3 key on the remote control.
Using the MusicCast CONTROLLER app to bookmark a station

1 Select the desired Internet radio station.

2 Tap ••• in the playback screen, and then tap “Add Bookmark”.

- You can use the Web browser on your PC to access the vTuner website (http://yradio.vtuner.com/) and edit bookmarks.
- When the vTuner website is accessed, a dialog in which the unit’s vTuner ID can be entered is displayed. Confirm the unit’s vTuner ID from “Network” of “Information” in the setup menu beforehand (p. 82)

Tuning into registered Internet radio stations

1 Tap “Bookmarks”, and then tap “My Favorites” to select the desired Internet radio station.
Playing back music with AirPlay

The AirPlay function allows you to play back iTunes or iPod music on the unit via network.

- This section describes “iPod touch”, “iPhone” and “iPad” as the “iPod”. "iPod" refers to "iPod touch", “iPhone” and “iPad”, unless otherwise specified.
- If no router is available, you can connect your iPod to the unit directly via a wireless connection for playback (Wireless Direct). For instructions on connecting with Wireless Direct, refer to p. 60.

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and Mac and PC with iTunes 10.2.2 or later.

Playback of iTunes/iPod music contents

Follow the procedure below to play back iTunes/iPod music contents on the unit.

1 Turn on the unit, and start iTunes on the PC or display the playback screen on the iPod.
   If the iTunes/iPod recognizes the unit, the AirPlay icon (aira) appears.
   - If the icon does not appear, check whether the unit and PC/iPod are connected to the router properly.

2 On the iTunes/iPod, click (tap) the AirPlay icon and select the unit as the audio output device.
3 Select a song and start playback.

To operate playback, use the Music app on the iPod or iTunes on the PC. “AirPlay” is shown in the front panel display, and playback begins.

- You can turn on the unit automatically when starting playback on iTunes or iPod by setting “Network Standby” (p. 84) in the setup menu to “On”.
- You can adjust the unit's volume from the iTunes/iPod during playback.

Caution

- When you use iTunes/iPod controls to adjust volume, the volume may be unexpectedly loud. This could result in damage to the unit or speakers. If the volume suddenly increases during playback, stop playback on the iTunes/iPod immediately.
Playing back music stored on mobile devices

Use this function to play music stored on your mobile device over a network.

Using a mobile device to play songs

Use the MusicCast CONTROLLER app installed on your mobile device to operate playback.

! Register the unit as a MusicCast-enabled device (p. 50) before playing music files.

1 Use the MusicCast CONTROLLER app to select the unit’s room (Room1, etc.).
2 Tap 📞.
3 Select a song from “Playlists”, “Artists”, etc.

Caution

- When you use mobile device controls to adjust volume, the volume may be unexpectedly loud. This could result in damage to the unit or speakers. If the volume suddenly increases during playback, stop playback on the mobile device immediately.
A variety of settings for this unit can be specified and adjusted from the setup menu. Among the options available are the sound beam output method for optimal surround sound effects, channel volume control, and HDMI settings.

The setup menu is displayed on, and operated from, the TV screen (it cannot be displayed in the front panel display). See “Displaying the menu screen on the TV” (p. 30) for instructions on displaying the setup menu on the TV.

Setting the setup menu

1 Press the SETUP (_SETUP) key.

2 Press the ▲/▼ key to select a menu and then press the ENTER key or ► key.

3 Press the ▲/▼ key to change the setting value of each menu.

4 Press the SETUP (_SETUP) key again to exit the setup menu.

- Hold down the SETUP (_SETUP) key to display “OSD Language” directly on the screen (p. 31, 85).
- If an update for the unit’s firmware is available, an envelope icon (✉️) will be displayed in the setup menu (p. 92).

Beam

When “AUTO SETUP” in the “IntelliBeam” menu (p. 33) is used, recommended beam settings are automatically applied by this unit. However, “Horizontal Angle”, “Beam Travel Length”, “Focal Length” (except “Center”), and “Image Location” settings can later be fine-tuned.

The output method for each channel can also be specified in “Beam” menu.

⚠️ When manually adjusting sound beams for the front channels, set “Front” for “Channel Out” to “Beam” or “Mix”. Adjustment is not possible if “Front” is set to “Stereo”.

### Horizontal Angle

Adjust the horizontal angle of sound beams for each channel using test tones. Adjust toward L (left) to move the direction of the output to the left and adjust toward R (right) to move it to the right.

Settings
- Front L, Front R, Center, Surround L, Surround R

Adjustable range
- L90° to R90°

### Beam Travel Length

Specify the distance that sound beams travel for each channel. The distance starts at this unit, ends at the listening position, and includes refraction off a wall. The audio delay is adjusted and sound from each channel arrives at the listening position simultaneously.

Settings
- Front L, Front R, Center, Surround L, Surround R

Adjustable range
- 0.3 m to 24.0 m (1.0 ft to 80.0 ft)

⚠️ Configure this setting only when you have adjusted “Horizontal Angle”.

The output method for each channel can also be specified in “Beam” menu.
Expand the optimal listening area (sweet spot).
The illustration below shows how output from all channels is once concentrated in a focal point and then expanded from that point. Apply negative (-) values to broaden the sweet spot, or positive (+) values to narrow the sweet spot.

**Focal Length**

Setup Menu ➔ Beam ➔ Focal Length

Expand the optimal listening area (sweet spot).

The illustration below shows how output from all channels is once concentrated in a focal point and then expanded from that point. Apply negative (-) values to broaden the sweet spot, or positive (+) values to narrow the sweet spot.

**Example**

- **Center channel**
  - With negative focal lengths
- **Left front channel**
  - With positive focal lengths

We recommend using the default setting (-0.5 m or -1.5 ft) for “Center”.

**Settings**

Front L, Front R, Surround L, Surround R

**Adjustable range**

- 1.0 m to +13.0 m (-3.5 ft to +43.5 ft)

**Setting**

Center

**Adjustable range**

- 1.0 m to +13.0 m (default: -0.5 m) (-3.5 ft to +43.5 ft (default: -1.5 ft))

*“AUTO SETUP” (p. 33) automatically enables a range for optimal listening (sweet spot) that is broader than the width of this unit.*
If sound from the left and right channels is unnatural, first adjust the volume of each channel (p. 43, 77).

If this does not resolve the problem, adjust left- and right-channel image location. Use to adjust the direction from which the front left and right channel sound is heard so that each sound can be heard closer to the center channel.

- **Adjustment**
  - **Settings**
    - Off (default) No adjustments are made.
    - On Choose “Left” or “Right” to adjust the direction from which sound is heard.

- **Left**
  - The higher the percentage, the louder the output from the center channel.
  - Once “Adjustment” has been set to “On”, this setting can be selected.
  - **Adjustable range**
    - 0% (default) to 95%

- **Right**
  - The higher the percentage, the louder the output from the center channel.
  - Once “Adjustment” has been set to “On”, this setting can be selected.
  - **Adjustable range**
    - 0% (default) to 95%
**Channel Out**

Specify the output method for each channel.

**Front**

Specify whether sound beams or normal sounds are output from the front channels.

- **Beam**
  - Sound beams are output from the left front, right front, and center channels. This setting is effective for creating sound fields greater than the dimensions of the actual listening room for playback of movies and the like.
- **Stereo**
  - No sound beams are output from the left front, right front, and center channels. Front channel audio comes from the direction of the screen. Therefore, this setting is effective for enjoying music content such as live music videos.
- **Mix**
  - Sound beams are output from the left front, right front, and center channels. Other channels are mixed into the left front and right front channels. This setting is effective when the listening position is close to the rear wall, or when several people have gathered to watch a movie.

**Settings**

<table>
<thead>
<tr>
<th>Beam</th>
<th>Stereo</th>
<th>Mix</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good quality of sound fields above the dimensions of the actual listening room for playback of movies and the like.</td>
<td>No sound beams are output from the left front, right front, and center channels. Front channel audio comes from the direction of the screen. Therefore, this setting is effective for enjoying music content such as live music videos.</td>
<td>Sound beams are output from the left front, right front, and center channels. Other channels are mixed into the left front and right front channels. This setting is effective when the listening position is close to the rear wall, or when several people have gathered to watch a movie.</td>
</tr>
</tbody>
</table>

**Surround Back**

Specify whether or not surround back channels are present.

- **None**
  - Sounds are played back without using surround back channels. Left and right surround channel audio is played back using sound beams that come from behind the listening position.
- **Yes**
  - Sounds are played back using surround back channels. Left and right surround back channel audio is played back using sound beams that come from behind the listening position. Left and right surround channel audio is output using both sound beams that come from the front channels and from behind the listening position. This allows sounds to be heard from the sides of the listening position as well.
- **Auto (default)**
  - Automatically select whether or not surround back channels are used based on the number of channels used for playback of the selected input source.

* This setting is not available when “My Surround” is selected.
My Surround

Specify whether or not “My Surround” is enabled to reproduce a sense of surround sound even in a room not suitable for surround sound playback using sound beams.

Settings

| Off (default) | My Surround is disabled. |
| On            | “My Surround” is enabled. Enjoy playing audio with a good sense of surround sound even in an environment where surround sound playback using sound beams does not provide sufficient surround sound effects. Press the SURROUND key on the remote control for playback using the My Surround function. |

- To use “My Surround”, establish the listening position directly in front of the unit for a greater sense of surround sound.
- When “My Surround” is set to “On”, CINEMA DSP is disabled.

Subwoofer

Apply or adjust subwoofer settings, such as the connection method and the subwoofer’s distance from the listening position.

Bass Out

Specify how the subwoofer is connected.

Settings

| Wireless (default) | Select to connect the center unit and subwoofer wirelessly. |
| Wired             | Select to connect the center unit and subwoofer via the subwoofer cable (RCA mono cable) and system control cable (3.5 mm monaural mini plug cable). |

Distance

Specify the distance from the subwoofer to the listening position.

Adjustable range

0.3 m (1.0 ft) to 15.0 m (50.0 ft) (default: 2.5 m (8.5 ft))

Pairing

Manually pair the center unit with the subwoofer.

After “Pairing” is selected, press the SUBWOOFER PAIRING button on the subwoofer for three seconds. For details, refer to “Pairing the center unit and subwoofer” (p. 105).

- “Pairing” can be selected when “Bass Out” is set to “Wireless”.
Sound

Channel Level

Adjust the volume of each channel to balance output levels. Use test sounds output from each channel to adjust volume for optimal balance.

Settings
Front L, Front R, Center, Surround L, Surround R, Subwoofer

Adjustable range
-20 to +20

- When “My Surround” of “Channel Out” is set to “On” the following items can be configured (p. 76).
  - Center
  - Surround L/R
  - Subwoofer

Adaptive DRC

Adjust this unit’s volume and dynamic range for optimal balance. When “On” is selected, dynamic range is adjusted as follows for optimal listening at low volumes, such as might be used at night.

When the volume level is low:
Narrow the dynamic range. Loud sound is played back softer, and soft sound which is hard to be listened to is played back louder.

When the volume level is high:
Widen the dynamic range. For both soft and loud sounds, source sound is played back without adjusting volume.

Settings
- Off: The dynamic range is not adjusted automatically.
- On: Adjust the dynamic range automatically.

- When set to “On”, “Dynamic Range” is automatically set to “Max”.
Dynamic Range

Adjust this unit's dynamic range (difference between maximum and minimum volumes).

Settings

Min/Auto
- Min: Sets dynamic range at a level that supports comfortable listening at low volumes.
- Auto: Sets dynamic range in accordance with information received from input signal.

Standard
- The dynamic range recommended for regular home use.

Max (default)
- Outputs sound without adjusting the dynamic range of the input signals.

* “Adaptive DRC” is automatically set to “Off” when the settings other than “Max” is selected.

Matrix Decoder

Set the surround decoder.

When this unit plays back 2-channel or 5.1-channel sources in the surround mode, surround decoder enables them playback for 7.1-channel. You can enjoy a variety of surround sound effects by switching the decoder.

To enable a surround decoder, press the CINEMA DSP key to select “DSP Off”.

Settings

DPL Movie* (default)
- Use the Dolby Pro Logic II decoder suitable for movies.

DPL Music*
- Use the Dolby Pro Logic II decoder suitable for music.

DPL Game*
- Use the Dolby Pro Logic II decoder suitable for games.

Neo:6 Cinema
- Use the DTS Neo: 6 decoder suitable for movies.

Neo:6 Music
- Use the DTS Neo: 6 decoder suitable for music.

* The Dolby Pro Logic IIx surround decoder is used when 7.1-channel audio is output in accordance with the selected “Channel Out” setting (p. 75).

- Decoders are disabled when stereo playback mode (p. 42), My Surround (p. 76), or target playback mode (p. 42) is enabled.
- Dolby Pro Logic IIx Music parameters (Center Width, Panorama, and Dimension) can be adjusted from the setup menu (p. 79).

About the surround decoder for playback of 5.1-channel sources

When “Surround Back” of “Channel Out” (p. 75) is set to “Yes” or “Auto”, this unit decodes 5.1-channel sources and then playback them in up to 7.1-channel surround. One of the following decoders is automatically selected depending on the input signals.

<table>
<thead>
<tr>
<th>Input signal (5.1 ch)</th>
<th>Decoder</th>
</tr>
</thead>
<tbody>
<tr>
<td>PCM, Dolby Digital, Dolby Digital EX, Dolby True HD, Dolby Digital Plus</td>
<td>Dolby Pro Logic IIx Movie, Dolby Pro Logic IIx Music</td>
</tr>
<tr>
<td>DTS, DTS-ES matrix, DTS-96/24, DTS-HD Master Audio, DTS-HD High Resolution Audio, DTS Express</td>
<td>DTS-ES matrix</td>
</tr>
<tr>
<td>DTS-ES discrete</td>
<td>DTS-ES discrete</td>
</tr>
</tbody>
</table>
Adjust Dolby Pro Logic IIx Music surround decoder parameters.

- This setting can be configured only when “Matrix Decoder” (p. 78) is set to “DPL Music”.

## Center Width
The greater the value, the broader the sound to the left and right. Smaller values restrict sound to the center.

### Adjustable range
0 to 7 (default: 3)

## Panorama
When this is set to “On”, sounds from the front left and right channels are routed to the left and right for a surround, panoramic effect.

### Settings
Off (default), On

## Dimension
This setting adjusts the difference in levels between the front and surround channels. The greater the value, the higher the volume from the front channel. The smaller the value, the higher the volume from the surround channels.

### Adjustable range
-3 to +3 (default: 0)

Specify whether or not the unit’s sound output timing is synchronized with other MusicCast-enabled devices when sound is distributed from this unit to other MusicCast-enabled devices.

- This setting can only be configured when “Link Control” is set to “Standard (default)” or “Speed Boost” with the MusicCast CONTROLLER app.

### Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Audio Sync</td>
<td>Output timing is synchronized with other MusicCast-enabled devices (to which sound from this unit is distributed).</td>
</tr>
<tr>
<td>Lip Sync</td>
<td>Output timing is adjusted in accordance with the “Audio Delay” setting in the option menu (p. 88). Select this option if you notice a deviation in timing between audio and video playing on a TV or BD/DVD player.</td>
</tr>
</tbody>
</table>
HDMI

Use to configure the settings related to HDMI signals and the HDMI control function.

### HDMI Control

Turn HDMI control (p. 37) on or off.

#### Settings

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Disable the control function. The standby power consumption of this unit decreases.</td>
</tr>
<tr>
<td>On (default)</td>
<td>Enable the control function.</td>
</tr>
</tbody>
</table>

- Set the HDMI control function to “On” when a TV that supports audio return channel (ARC) is used (p. 24), or when using the HDMI signal pass-through function (p. 25).

### HDMI Audio Out

This setting can be configured only when “HDMI Control” is set to “Off”.

#### Settings

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AMP (default)</td>
<td>Play HDMI audio input signal from the unit.</td>
</tr>
<tr>
<td>TV</td>
<td>Play HDMI audio input signal from the TV connected to the HDMI OUT (ARC) jack on the unit.</td>
</tr>
</tbody>
</table>

- When “HDMI Control” is set to “On”, select the audio output device based on the settings configured for the TV connected to this unit.
- HDMI video signals input to one of the HDMI IN jacks of this unit are always output from the HDMI OUT (ARC) jack of this unit.

### TV Input

If your TV is not ARC compatible (or if the ARC feature has been disabled), TV audio is input via the TV (optical digital) input jack (default). This unit's input source can be changed to the AUX2 (coaxial digital) input jack or AUX1 (analog) input jacks.

#### Settings

Optical [TV] (default), Analog [AUX1], Coaxial [AUX2]

- If this unit's input source is switched to "Coaxial [AUX2]":
  Audio is input from the device (TV) connected to the AUX2 (coaxial digital) input jack on this unit when the TV key is pressed. Audio is input from the device connected to the TV (optical digital) input jack on this unit when the AUX2 key is pressed.
- If this unit's input source is switched to "Analog [AUX1]":
  Audio is input from the device (TV) connected to the AUX1 (analog) input jacks on this unit when the TV key is pressed. Audio is input from the device connected to the TV (optical digital) input jack on this unit when the AUX1 key is pressed.
Bluetooth

Configures the Bluetooth settings.

### Bluetooth

#### Setup Menu ➔ Bluetooth ➔ Bluetooth

Enables/disables the Bluetooth function.

<td>Wireless Direct</td>
<td>Select this option when connecting a mobile device to the unit directly.</td>
</tr>
</tbody>
</table>
IP Address

Configure the network parameters (such as IP address).

DHCP

Select whether to use a DHCP server.

Settings

- Off: The DHCP server is not used. Configure the network parameters manually. For details, see "Manual network settings".
- On (default): The DHCP server is used to automatically obtain the unit’s network parameters (such as IP address).

Manual network settings

1. Set “DHCP” to “Off”.
2. Use the ▲/▼ keys to select a parameter type.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Address</td>
<td>Specify an IP address.</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>Specify a subnet mask.</td>
</tr>
<tr>
<td>Default Gateway</td>
<td>Specify the IP address of the default gateway.</td>

</tr>
</tbody>
</table>

3. Use the ◀/▶ keys to move the edit position and the ▲/▼ keys to select a value.
4. Press the ENTER key.

MAC Address Filter

The MAC address filter limits network devices that can be used to operate the unit. When operating the unit via an app on a mobile device, specify the MAC address of the device.

Filter

Enable/disable the MAC address filter.

Settings

- Off (default): Disable the MAC address filter.
- On: Enable the MAC address filter. In "MAC Address 1–10", specify the MAC addresses of the network devices that will operate the unit.

MAC Address 1–10

Specify the MAC addresses (up to 10) of the network devices that will operate the unit when “Filter” is set to “On”.

1. Use the ▲/▼ keys to select an MAC address number (1 to 10).
2. Use the ◀/▶ keys to move the edit position and the ▲/▼ keys to select a value.
3. Press the ENTER key.
Network Standby

Turn the function that controls the unit's power (Network Standby) when a mobile device or Bluetooth device is operated on or off.

Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Disable the network standby function.</td>
</tr>
<tr>
<td>On (default)</td>
<td>Enable the network standby function.</td>
</tr>
</tbody>
</table>

- When the unit is turned off, it will turn on with the following playback operations.
  - Play back with AirPlay
  - Music files stored on a DLNA-compliant network attached storage (NAS) unit are played
- The unit can also be turned on and off using the MusicCast CONTROLLER app installed on your mobile device.

When a Bluetooth device is connected to this unit while it is off, this unit turns on.

- The unit consumes more power when “Network Standby” is set to “On” than when it is set to “Off”.

Network Update

Update the firmware via the network.

Perform Update

This option is available after firmware has been updated. For details, see “Updating the unit’s firmware” (p. 92).
### Function

#### Dimmer

Adjust the brightness of the front panel display and indicators. The smaller the value, the dimmer the display and indicators.

**Settings**
-2 (darkest) to 0 (brightest) (default)

- When the indicator glows red, the display is at maximum brightness regardless of this setting.
- When the Eco function is activated, this function cannot be configured (p. 45).

#### OSD Language

Use to select the language used for menus displayed on the TV screen.

**Settings**

<table>
<thead>
<tr>
<th>Language</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>日本語</td>
<td>Menus are displayed in Japanese.</td>

</tr>
</tbody>
</table>

### Distance Unit

Use to change the display unit of measurement.

**Settings**

- Meters (default setting other than U.S.A. and Canada models), Feet (default setting for U.S.A. and Canada models)

- If the unit used with measurement displays is changed from “Meters” to “Feet”, or vice versa, configure settings again to reflect the change in unit. The change will not be reflected with current settings.
**Information**

Display information for the audio and video signal input to this unit.

### Audio

The following information on the current audio input signal is displayed.

<table>
<thead>
<tr>
<th>Format</th>
<th>Digital audio format</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of channels</td>
<td>The number of channels contained within the input signal—front/surround/low field effects (LFE). Example: “3/2/0.1” means signal contains 3 front channels, 2 surround channels, and LFE. If the signal contains channels other than front, surround, and LFE, the total number of channels may be displayed. Example: “5.1ch”</td>
</tr>
<tr>
<td>Sampling frequency</td>
<td>The sampling frequency of the digital input signal</td>
</tr>
<tr>
<td>Bit rate</td>
<td>The per-second bit rate of the input signal</td>
</tr>
</tbody>
</table>

> The audio bit rate may not be displayed for some input signals.

### Video

The following information on the current video input signal is displayed.

<table>
<thead>
<tr>
<th>Type</th>
<th>HDMI or DVI</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resolution</td>
<td>Video signal resolution</td>
</tr>
</tbody>
</table>
Settings each input source (Option menu)

Configure the functions related to the input source currently playing back content.
The option menu is displayed on, and operated from, the TV screen. See “Displaying the menu screen on the TV” (p. 30) for instructions on displaying the option menu on the TV.

Setting the option menu

1. Press the input selector key for the input source to be configured.
2. Press the OPTION (…) key.
3. Select the items by pressing the ▲/▼ key, then press the ENTER key or ► key.
4. Change setting value by pressing the ▲/▼ key.
5. Press the OPTION (…) key to exit the option menu.

• The configurable items vary depending on the input source selected.

<td>HDMI1– 3</td>
</tr>
</tbody>
</table>

### Adjusting tones (Treble, Bass)
Adjust the output level of high (treble) and low (bass) tones.

**Adjustable range**
-12 to +12 (default: 0)

### Adjusting input level of each jack (Volume Trim)
Adjust the input level for each jack to compensate for variations in volume.

**Adjustable range**
-12 to +12 (default: 0)

### Audio delay control (Audio Delay)
TV images sometimes lag behind the sound. You can use this function to delay the sound output to synchronize it with the video image.

⚠️ Audio delay can only be adjusted when “Audio Delay (LINK)” (p. 79) is set to “Lip Sync”.

**Adjustable range**
- HDMI1– 3: AUTO (default), 0 ms to 500 ms, 5 ms increments
- TV, AUX1– 2: 0 ms (default) to 500 ms, 5 ms increments

When “AUTO” is selected, output timing is automatically adjusted. This setting is only available when the TV connected via HDMI cable supports the audio delay automatic adjustment feature.

### Assigning HDMI audio to a different input jack (Audio Assign)
When HDMI1– 3 is the selected input source, sound can be input from the TV (optical digital) input jack rather than the HDMI IN jack.

Use this function to listen to sound from a different playback device while watching video of the BD/DVD player.

**Settings**
- HDMI (default), OPTICAL
The advanced setup enables more precise configuring of this unit's function. For example, maximum volume can be specified and the INPUT key on the top panel can be disabled.

Setting the advanced setup

1. Press the \( \odot \) key to turn off this unit.
2. While holding down the INPUT key on the top panel, press the \( \odot \) key on the remote control to turn on the power.
3. Release the INPUT key on the top panel.
4. Use the \( \uparrow/\downarrow \) key to display the desired menu in the front panel display and then press the \( \rightarrow \) key or ENTER key.
   • To return to the previous menu, press the \( \leftarrow \) or RETURN \( (\odot) \) key.
5. Use the \( \uparrow/\downarrow \) key to change setting.
6. Press the \( \odot \) key to turn off this unit.

The new setting is reflected when you turn on the unit by pressing the \( \odot \) key.

“ADVANCED” appears in the front panel display.

2) Initializing this unit also initializes measurement results with IntelliBeam and settings stored in system memory. Perform “AUTO SETUP” from the “IntelliBeam” menu again (p. 32).
Updating the unit’s firmware

New firmware that provides additional features or product improvements will be released as needed. If the unit is connected to the Internet, you can download the firmware via the network and update it.

The unit’s firmware can be updated as follows.

- Update firmware from “Network Update” in the setup menu.
- Update firmware by connecting a USB flash drive to which the unit’s firmware update has been saved (p. 93).
- Update firmware using the dedicated MusicCast CONTROLLER app installed on a mobile device. Follow MusicCast CONTROLLER guides to operate the app and update the firmware.

Notes

- Do not operate the unit or disconnect the power cable or network cable during firmware update. Firmware update takes about 20 minutes or more (depending on your Internet connection speed).
- If the Internet connection speed is slow, or the unit is connected to the wireless network, network update may not be possible depending on the condition of the network connection. In this case, update the firmware using the USB flash drive (p. 93).
- To perform the following procedure, your TV must be connected to the unit via HDMI.
- For details on update, visit the Yamaha website.

Using “Network Update” in the setup menu to update firmware

When the unit is turned on for the first time after a new version of the unit’s firmware has been released, a message indicating that a firmware update is available will be displayed on the TV screen.

1. Press the SETUP ( ) key.

2. Use the ▲/▼ keys to select “Network”, and then press the ENTER key.

3. Use the ▲/▼ keys to select “Network Update”, and then press the ENTER key.
4 Press the ENTER key.
The TV screen goes black and firmware update begins.
Update progress is displayed on the front panel display while firmware is updated.

FW Update

The update progress is displayed.

Success!

5 When “Success!” is shown in the front panel display, press the ○ key on the unit’s top panel.
The firmware update is complete.

! If the firmware update fails, use the ○ key to turn the unit off and then on again, and repeat the procedure from step 1 again.

! If “XXXXSumError” is displayed, a problem with communications over the network has occurred. Check communications status, use the ○ key to turn the unit off and then on again, and then repeat the procedure from step 1 again.

Updating firmware with connection of a USB flash drive
Download the latest firmware version from the Yamaha website to a USB flash drive, which can then be used to update the unit’s firmware.
See information provided when updating firmware for details.

1 Save this unit’s firmware to a USB flash drive.
2 Turn off the unit.
3 Connect the USB flash drive to the UPDATE ONLY jack on the unit’s rear panel.

4 Select “FW UPDATE” in the advanced setup menu, and press the ENTER key.
The firmware update begin.
Update progress is displayed on the front panel display while firmware is updated.

FW Update

The update progress is displayed.

Success!

5 Use ▲/▼ key to select “Start OK?”, and press the ENTER key.
The firmware update begin.
Update progress is displayed on the front panel display while firmware is updated.

FW Update

The update progress is displayed.

Success!

6 When “Success!” is shown in the front panel display, press the ○ key on the unit’s top panel.
The firmware update is complete.

! If the firmware update fails, use the ○ key to turn the unit off and then on again, and repeat the procedure from step 1 again. If the firmware update fails again, confirm the USB flash drive is correctly connected to the UPDATE ONLY jack.

! If any of the following messages are displayed, a problem has occurred during the update.
– “Not found”: The USB flash drive does not contain the firmware data. Use a PC to properly save the firmware data to the USB flash drive again.
– “XXXXSumError”: There is a problem with the data stored on the USB flash drive. Use a PC to confirm data on the USB flash drive.
Refer to the chart below when this unit does not function properly. If the problem you are experiencing is not listed below or if the instruction below does not help, turn off the unit, disconnect the AC power supply cable, and contact the nearest authorized Yamaha dealer or service center.

</tbody>
</table>
When surround effect is not enough

The unit achieves its surround sound effects by projecting sound beams which reflect off walls. The sound beams are not reflected toward to the listening position caused by furniture, etc., in the path of sound beams, or the room shape. In this case, the sound may become unbalanced.

If the sound beams are not reflected toward to the listening position (figure 2), you can adjust for this by installing the optional sound reflection board YRB-100.

![Figure 1. Ideal condition](image1)

![Figure 2. Surround right beam is not being reflected because there is no wall. Surround right is quieter than surround (left), or surround right is in front of its proper location.](image2)

![Figure 3. With a sound reflection board installed. The sound beam for surround right is reflected correctly, and correct surround sound effect is achieved.](image3)

YRB-100 may not be available in some countries or regions.

Installing and adjusting the sound reflection board YRB-100

1. Decide the position of the sound reflection board.
   Install the sound reflection board as shown in the picture.

   - Always hold the pole when moving the sound reflection board.
   - Use “Channel Level” in the setup menu (p. 77) to determine the precise direction from which sounds are difficult to hear.

   **Recommended position for installation**

   ![Diagram](image4)

   Front side
   Approx. 1.5 to 3 m (5 to 10 ft)

   YRB-100

   Front side
   Install the panel front side of the listening position, and outside of the surround side panel.

   Listening position

   Surround side
   Install the panel back side of the listening position, and inside of the front side panel.

   Approx. 1 to 2.5 m (3 to 8 ft)
2 Use advanced setup (p. 89) to configure the sound reflection board. Set “YRB FL” (FL), “YRB FR” (FR), “YRB SL” (SL), and “YRB SR” (SR) to “YES” depending upon the position of the sound reflection board to be installed.

Color bars are displayed across the entire TV screen. This makes it easier to recognize whether the TV screen is reflected in the panel when determining the proper angle of the panel in step 4, to the left or right.

3 Adjust the height.

Adjust the height of the sound reflection board panel based on the position of the unit and the sound reflection board, as well as the listening position.

See the YRB-100 Owner's Manual for more information.

4 Adjust the angle of the panel left or right.

Adjust the angle of the panel so that sound beams are reflected toward the listening position.

Turn on the TV and dim the lights in the room. If you see the TV screen (color bar display) reflected in the panel from your listening position, the angle of the panel is properly adjusted.

See the YRB-100 Owner's Manual for more information.

5 Press the key to turn this unit off. Press it a second time to turn this unit on again.

6 Plug the IntelliBeam microphone into this unit and then perform “AUTO SETUP” (Beam+Sound optimize) from the “IntelliBeam” menu (p. 33).

Be sure that the channels (FL, FR, SL, and SR) configured for the sound reflection board are displayed for “YRB” on the SHOW RESULT screen. An asterisk (*) is displayed with a channel exhibiting poor sound beam reflection.

Should this occur, follow the instructions below to re-adjust the panel.

① Adjust the height and angle of the sound reflection board panel in accordance with installation conditions.

② Use “Channel Level” in the setup menu (p. 77) to confirm that the test sound is successfully reflected.

For greater precision, perform “AUTO SETUP” in the “IntelliBeam” menu, and then confirm that the asterisk (*) is no longer displayed with the channel.

If the asterisk (*) continues to be displayed, or if there is still no test sound reflected from the direction of the sound reflection board, follow directions in the YRB-100 Owner's Manual to adjust sound beams manually.
Pairing the center unit and subwoofer

Be sure that “Bass Out” of “Subwoofer” in the setup menu is set to “Wireless” (p. 76).

Pairing is the process of establishing a wireless connection between the center unit and subwoofer. When the center unit is turned on for the first time, the center unit and subwoofer are usually paired automatically. If a problem occurs (e.g., the STATUS indicator on the subwoofer does not glow green), follow the instructions below to pair the center unit and subwoofer manually.

1. Turn on the center unit.
2. Press the SETUP (-profit) key.
3. Use the $/T keys to select “Beam”, and then press the ENTER key.
4. Use the $/T keys to select “Subwoofer”, and then press the ENTER key.
5. Use the $/T keys to select “Pairing”, and then press the ENTER key.
6. Use an object with a fine point, such as a pin, to hold down the SUBWOOFER PAIRING button on the subwoofer for more than 3 seconds.

The subwoofer’s STATUS indicator will rapidly blink green. Once pairing has been completed and the link between the center unit and subwoofer has been re-established, the STATUS indicator will glow green. “Completed” appears on the TV screen.

- If “Not connected” is displayed on the TV screen or the subwoofer’s STATUS indicator does not glow green after 30 seconds have passed, repeat the procedure from step 2. If the problem persists, refer to “No sound is coming from the subwoofer” in “Troubleshooting” (p. 96).
What is Surround Sound?

Surround sound offers the sense of being surrounded by sounds, an experience common in concert halls and movie theaters. This can be achieved by surrounding the audience with numerous speakers from which sound is output uniformly in all directions. This “surround sound” technology immerses the listener in sound with speakers positioned not only in front of the listener, but also behind and to the sides of the listener, making him or her feel as if they are actually in the situation.

For precise directional control and quality of sound reproduction, sounds must be split into separate audio channels for output to each speaker. Surround sound systems for regular home use (7.1-channel speaker systems) produce surround sound using seven speakers and a subwoofer, as shown below:

A highly realistic sound field can be created with multiple speakers installed around the listening position as shown in the illustration above. However, this can be difficult to do in a living room. The unit utilizes “digital sound projector” technology, enabling it alone to provide a realistic and engaging surround sound experience.

What is a Digital Sound Projector?

A digital sound projector provides optimal control over the delay time for each of the compact speakers installed in orderly rows, and drives the amplifier for each of these speakers, synthesizing audio signals output from each speaker as highly focused sounds (sound beams).

These focused sounds possess wave-like characteristics. When they hit a hard wall, they are reflected off the wall. A digital sound projector outputs sound beams from five channels, including front (left/right), center, and surround (left/right) channels, by reflecting these beams off the walls so that sounds reach the listener from the appropriate direction. It features a technology that enables true surround sound without requiring the installation of speakers behind or to the sides of the listener.

By combining sound beams coming from the front (left/right) and back (left/right), it can also create two new audio channels for surround sound playback using 7 channels. With this configuration, the new audio channels output sounds from surround sound channels, while sound beams coming from behind the listening position (left/right) output sounds from surround back channels.

Yamaha’s audio technologies

This unit features many more functions based on Yamaha’s superior audio technologies.

Compressed Music Enhancer

This technology enhances and extends bass and treble, which tend to be weak in digitally compressed formats such as MP3 used with portable digital audio players and computers. This makes compressed audio sound more musically dynamic.

CINEMA DSP

This technology enables precise digital recreation of actual acoustic environments found in well-known concert halls and movie theaters. This is achieved using Yamaha’s exclusive sound field programs, which are based on data measured in various sound fields, and with which the amplitude, depth, and volume of sounds have been adjusted.
Audio/video information

Sampling Frequency and Bit Depth
These are values that represent the amount of information used to convert analog signals to digital signals. They may be expressed as 48kHz/24bit, for example.

- **Sampling Frequency**
  This defines the number of samples per second (sampling a finite set of discrete values in an analog signal). The higher the sampling rate, the broader the range of frequencies that can be played back.

- **Bit Depth**
  This defines the amplitude value of sounds when quantifying analog signals as finite values. The higher the bit depth, the deeper sounds are reproduced.

Deep Color
This is a video technology supported by the HDMI standard. It processes RGB or YCbCr signals at bit depths of 10, 12, or 16 bits per color, whereas conventional formats utilize only 8-bit processing, enabling reproduction of more colors. Its gamut is comprised of a billion or more colors, while the gamuts of conventional formats are comprised of only millions of colors or less. This broader gamut results in more precise reproduction of colors and greater detail in darker portions.

Dolby Digital
This is a compressed audio format for 5.1 channels. It was developed by Dolby Laboratories, and is widely used with DVD discs.

Dolby Digital EX
This technology enables 6.1-channel playback for sources encoded in the Dolby Digital EX format. It takes the Dolby Digital 5.1-channel setup one step further with an additional back surround channel.

Dolby Digital Plus
This is a compressed audio format for 7.1 channels developed by Dolby Laboratories. It is fully compatible with Dolby Digital and is available for playback on Dolby Digital-enabled audio systems. It is widely used with Blu-ray Discs.

Dolby Pro Logic II
This technology converts audio signal recorded in 2 channels to 5-channel signal. There are three modes available: “Music mode” for stereo music sources, “Movie mode” for movie sources, and “Game mode” for game sources.

Dolby Pro Logic IIx
This technology converts not only audio recorded in 2 channels, but also audio signal recorded in multiple channels to discrete 7-channel sound. There are three modes available: “Music mode” for music sources, “Movie mode” for movie sources and “Game mode” for game sources.

Dolby TrueHD
This advanced lossless audio technology was developed by Dolby Laboratories for high-definition disc-based media to deliver sounds that are identical, bit for bit, to studio masters for a great home theater experience. It delivers up to 8 discrete channels of 24-bit/96-kHz (up to 6 discrete channels of 24-bit/192 kHz) audio simultaneously, and is widely used with Blu-ray Discs.

DTS Digital Surround
This is a compressed audio format for 5.1 channels developed by DTS. It is widely used with DVD discs.

DTS Express
This is a compressed audio format for 5.1 channels. It provides a higher compression ratio than the DTS Digital Surround audio format, and was developed specifically for network streaming and Blu-ray Disc secondary audio.

DTS-HD High Resolution Audio
This is a compressed audio format for 24-bit/96-kHz superior sound quality with 7.1 channels developed by DTS. It is fully compatible with DTS Digital Surround, and is widely used with Blu-ray Discs.

DTS-HD Master Audio
This advanced lossless audio technology was developed by DTS for high-definition disc-based media to deliver sounds identical, bit for bit, to studio masters for a great home theater experience. It delivers up to 8 discrete channels at 24-bit/96 kHz (up to 6 discrete channels at 24-bit/192 kHz) audio simultaneously, and is widely used with Blu-ray Discs.

DTS Neo:6
This technology enables discrete 6-channel playback from 2-channel sources. There are two modes available: “Music mode” for music sources and “Cinema mode” for movie sources. It provides a channel split effect similar to sources recorded as discrete surround sound.

HDMI
High-Definition Multimedia Interface (HDMI) is a digital audio/video interface that has become an industry standard around the world. It is capable of transmitting both digital video and audio signals intact via a single cable. It is also compliant with the High-bandwidth Digital Content Protection (HDCP) standard. See http://www.hdmi.org for more information.

Pulse Code Modulation (PCM)
This technology records analog audio signals in digital form, converts analog audio signals to digital audio signals, and transmits analog audio signals in digital form. It is the underlying technology for all digital audio signal systems, and is widely used with CDs, Blu-ray Discs, and many other types of media as a uncompressed audio format known as Linear PCM.

x.v.Color
This is a color space supported by HDMI. It has become an international standard for video and offers a broader gamut than does the sRGB standard for expression of colors never before possible. It expands the color space while ensuring compatibility with the sRGB standard for more natural and vivid images.
Network information

SSID
SSID (Service Set Identifier) is a name that identifies a particular wireless LAN access point.

Wi-Fi
Wi-Fi is a technology that allows an electronic device to exchange data or connect to the Internet wirelessly using radio waves. Wi-Fi offers the advantage of eliminating the complexity of making connections with network cables by using wireless connection. Only products that complete Wi-Fi Alliance interoperability tests can carry the “Wi-Fi Certified” trademark.

WPS
WPS (Wi-Fi Protected Setup) is a standard established by the Wi-Fi Alliance, which allows easy establishment of a wireless home network.
## Specifications

### YSP-CU2700

#### Amplifier section
- **Rated Output Power**
  - Tweeter (1 kHz, 1% THD, 4 Ω) ...................................... 27.2 W
- **Maximum Effective Output Power**
  - Tweeter (1 kHz, 10% THD, 4 Ω) ....................................... 32 W

#### Speaker section
- **Speaker Type**...Acoustic Suspension/Magnetic Shielding type
- **Driver**
  - Tweeter ......................................... 2.8 cm (1-1/8 in) Cone × 16
- **Impedance ..........................................................................4 Ω**
- **Frequency Response ....................................500 Hz to 22 kHz**

#### Input jacks
- **Audio Input**
  - Optical .............................................................................1 (TV)
  - Coaxial........................................................................1 (AUX2)
  - Analog ........................................................................1 pair (AUX1)
- **HDMI Input .................................3 (HDMI IN 1 to 3)**

#### Output jacks
- **HDMI output (ARC).................................1**
- **Subwoofer output.................................................1**

#### Other jacks
- **INTELLIBEAM MIC.........................................................1**
- **SYSTEM CONNECTOR ......................................................1**
- **NETWORK .................................................................1**
- **UPDATE ONLY.............................................................1**

### Network
- **Ethernet standard: 100BASE-T/10BASE-T**
- **Compatible with DLNA ver. 1.5**
- **Supported codecs**
  - WAV (PCM format only) /AIFF/FLAC: up to 192 kHz
  - ALAC: up to 96 kHz
  - MP3/WMA/MPEG-4 AAC: up to 48 kHz
- **AirPlay supported**
- **Internet Radio**
  - **Wireless LAN (Wi-Fi)**
    - **Wireless LAN Standards .........................IEEE802.11b/g/n**
    - **Radio Frequency Band ................................................2.4 GHz**
    - **WPS (Wi-Fi Protected Setup) .................................................Push-Button-Method, PIN Method**
    - **Security Type............... WEP, WPA2-PSK (AES), Mixed Mode**
  - **Wireless LAN (Wireless Direct)**
    - **Direct connection with mobile devices**

### Bluetooth
- **Bluetooth version Ver. 2.1 +EDR**
- **Radio Frequency Band ................................................2.4 GHz**
- **Supported protocols**
  - Receiving: A2DP, AVRCP
  - Transmitting: A2DP
- **Supported codecs**
  - Receiving: SBC, MPEG-4 AAC
  - Transmitting: SBC
- **Wireless output......................................Bluetooth Class 2**
- **Range (line-of-sight).................................Approx. 10 m (33 ft)**
- **Supported content protection method......SCMS-T (receiving)**

### General
- **Power Supply**
  - [U.S.A. and Canada models]..............................AC 120 V, 60 Hz
  - [Taiwan model].......................................................AC 110–120 V, 50/60 Hz
  - [China model] ........................................................AC 220–240 V, 50/60 Hz
- **Power Consumption.................................................24 W**
- **Standby Power Consumption**
  - HDMI Control Off, Network Standby Off ......................0.3 W
  - HDMI Control On, Network Standby Off .......................0.8 W
  - HDMI Control Off, Network Standby On (Wired/Wi-Fi/Wireless Direct/Bluetooth) ......................1.8/1.8/1.9/1.7 W
  - HDMI Control On, Network Standby On .....................2.3 W
- **Dimensions (W × H × D)**
  - Antenna raised..............................................944 x 91 (110)* x 154 mm
  - Antenna lowered..............................................944 x 51 (70)* x 154 mm
  - * Values in parentheses are heights with the stands attached.
- **Weight.................................................................4.0 kg (8.8 lbs)**
NS-WSW121

- **Driver** ........................................................................................................... 14 cm (5-1/2 in) cone woofer x 1 non-magnetic shielding type
- **INPUT jack** ........................................................................................................ 1
- **SYSTEM CONNECTOR jack** .............................................................................. 1
- **Output power** ................................................................................................. 75 W (100 Hz, 6 Ω, 10% T.H.D)
- **Dynamic power** .............................................................................................. 130 W
- **Frequency response** ...................................................................................... 40 Hz–500 Hz
- **Wireless**
  - **Radio Frequency Band** .............................................................................. 2.4 GHz
  - **Transmission Range** ........................................................................... 10 m (33 ft) (without interference)
- **Power supply**
  - [U.S.A. and Canada models] ................................................................. AC 120 V, 60 Hz
  - [Taiwan model] .......................................................................................... AC 110–120 V, 60 Hz
  - [Australia model] ...................................................................................... AC 240 V, 50 Hz
  - [U.K. and Europe models] .......................................................................... AC 230 V, 50 Hz
  - [China model] ............................................................................................. AC 220 V, 50 Hz
  - [Korea model] ............................................................................................. AC 220 V, 60 Hz
  - [Asia model] ............................................................................................... AC 220–240 V, 50/60 Hz
- **Power consumption** ...................................................................................... 75 W
- **Standby Power Consumption** .................................................................... 75 W
- **Dimensions (W x H x D)** .............................................................................. 295 × 297 × 307 mm (11-5/8 × 11-3/4 × 12-1/8 in)
- **Weight** ........................................................................................................... 9.1 kg (20 lbs)

YSP-CU2700 + NS-WSW121

- **Frequency Response** ........................................................................... 40 Hz to 22 kHz (-10 dB)
- **Crossover frequency** .............................................................................. 500 Hz

- Refer to documentation supplied with the playback device, and set the device appropriately.
- When CPPM copy-protected DVD-Audio is played back, video and audio signals may not be output depending on the type of the DVD player.
- This unit is not compatible with HDCP-incompatible HDMI or DVI devices. Refer to documentation supplied with the HDMI or DVI device for HDCP compatibility.
- To decode audio bitstream signals on this unit, set the input source device appropriately so that the device outputs the bitstream audio signals directly (does not decode the bitstream signals on the device). Refer to documentation supplied with the device for details.
