

■ Producer Introduction

Featuring 416 LEDS(208 LED and 208 RGB Beads), the DR728RGBW bi-color LED video light from DRACAST, is an ideal choice for location work, interviews and small sets where color accuracy, control and flicker-free output are of major importance. The DR728RGBW have two output modes. The first mode is variable color temperature from 2000K-5600K or anywhere in between means that you can quickly match the prevailing ambient or artificial light balance with a simple twist of a knob. The second mode allows you to change the Red, Green and Blue Color output and color saturation from 0-100%. Dimming is equally convenient via another knob that adjusts the light intensity from 100-0% with negligible color shift. One of the light's enhancements is wireless Multi-Light Control Capability whereby you can make color and dimming adjustments to a single master light and other lights in a group will follow suit. The durable aluminum frame is supported by a sturdy, U-shaped yoke with locking knobs and a standard 5/8" receiver. The DR728RGBW can be used worldwide, powered by the included 100-240 VAC adapter or by optional V-mount batteries.

■ Main Features

- Ultra Heat Dissipation
- Delicate Design with Aviation Aluminum Alloy Housing
- High Color Rendering Index, CRI96+
- LCD digital display
- PWM Dimming Technology
- Brightness Adjustment
- Color Temperature Adjustment
- Red, Green and Blue RGB Modes
- Multi-Light Control Modes
- Dual Power System
- Convenient Light Set-UP and Stabilization System
