* Indicates that the Canon SLR camera is recommended to take the camera in MF mode. If the camera is shot in AF mode, there will be a low probability of focus failure and jam.

Note

The power is turned off in the Sony camera's internal settings, and the gimbal still supplies power to the camera. If this is the case, switch the wire selection (Multi ↔ Multi/C) on the gimbal to switch whether or not to power the camera.

Whether it is a Micro cable or a Multi/C cable, When connecting the camera, if it appears, please check the connected device prompt. The solution is to restart the stabilizer and reconnect it once.

These three Sony models can achieve electronic focus: Alpha 7 III, Alpha 7R III, Alpha 6400, If you can't make electronic focus, you can try the lens to be in AF mode, but the camera needs to be set to MF mode.

Note:

1. Due to the variety of lens, the following lens parameters and test data are for reference only.

2. The measured data of the following camera with lens does not apply to any riser plate or counterweight.

3. Due to the limited test lens set, most lenses not listed can be assembled and balanced as long as the dimensions meet the following recommendations.

4. The information in the lens compatibility table will be continuously updated after testing is completed. Other lenses not listed in the table may be compatible if mechanical balance can be achieved on the MOZA AirCross 2.
