

KODAK ALARIS UPDATE

KODAK PROFESSIONAL Dektol Developer

Item # 1058296, to make 1 gal

Dektol batches with date codes of August 2019 or later will exhibit a dark brown solution when mixed.

However, image quality is unaffected - The color is due to an impurity which is not photo-active.

Our manufacturing as well as an outside lab have tested the dark colored Dektol batches: Sensitometry Dmax, Dmin, paper speed, and image tone match the Dektol standard.

We are working on the source of the impurity so we can get the appearance back to normal. Example of color below:

Kodak Professional Dektol Developer

Cat # 1058296

**KODAK Professional
Dektol Developer to make 1 gal**

Each bag is formulated to make 1 gal of Dektol Developer
