

XLRTWIST-360

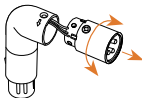

The male and female connectors can both be rotated to four preset angles: up, down, left, and right.

Rotate either connector by following these steps:

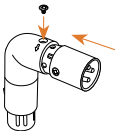

1. Use a small Phillips screwdriver to remove the screw closer to the elbow.

2. Gently pull the connector from the housing and rotate it to the preset holes at 90°, 180°, or 270°. Then press the connector back into the adapter.

3. Replace and tighten the screw.

Important! Do not rotate the connectors more than 360°.

When setting the connector back to its original position, rotate it back in the opposite direction to prevent cable strain.

Do not loosen the screw that's closer to the connector.
