

6. Master Caddy II, Screw Mounts and Sun Hood cont.

Screw the hood into the base

Attach base to Sumo19

Fold out the face of the hood

Attaching the Sun Hood

For HDR, the viewing experience can easily be influenced by the environmental conditions and the best experience for viewing HDR requires that you minimise the ambient light between your eyes and the screen to easily resolve the dynamic range of the scene.

For this reason, we have developed an optional sun hood for Sumo. It consists of a zippered corner construction that allows the user to collapse and use as screen protection during transportation and securely screws to the front face of Sumo to provide shelter for privacy and premium outdoor monitoring.

To assemble the sun hood please follow the following steps:

Attach the base to the Sumo19 in the orientation shown above.

 *This is a snug fit in order to minimize external light bleed.*

Push the sunhood in, align the top and bottom screw mounting holes and attach the retaining screws.

 *As the retaining screws provide anchor point for mounting make sure they are firmly connected to provide a solid base.*

With the Sun hood base in place, take the main section and pop this out to form a rectangular tunnel and zip up the sides to ensure it looks like the image above.
