## Overview

VIVOTEK IZ9361-EH is an H.265 outdoor-ready network camera with 150m IR illuminators and a 20x optical zoom lens, providing a superb low light image for the most challenging situations. By adopting VIVOTEK's latest IR technology, VAIR (Vari-Angle IR), allows IZ9361-EH to automatically adjust the IR angle to the optical zoom delivering consistent IR images in all fields of view.

The IZ9361-EH also features VIVOTEK's sophisticated Smart Stream II technology. This enables it to optimize quality for desired regions, therefore maximizing bandwidth efficiency.

By combining H.265 compression technology and VIVOTEK's Smart Stream II technology, users can obtain bandwidth savings of up to 80%\* compared to traditional H.264 systems.

Additionally, in order to ensure full protection against both harsh environments and acts of vandalism, the IZ9361-EH is specifically designed with an IP67-, NEMA 4X- and IK10-rated housing, with a wide temperature range from -50°C to 60°C making it suitable for all outdoor surveillance applications such as highway traffic monitoring, city surveillance, and harbor patrol.

\* Depending on scene being monitored.

## Revision History

- Rev. 1.0: Initial release.
- Rev. 1.1: Added the description for the Focus window function.
- Rev. 1.2: Corrected DI/DO related pin description.
- Rev. 1.3: Updated password policy, SD card capacity, video profiles, use of RTSP players, authentication, system time time zone, logs, RTSP streaming, and URL command update.

### セキュリティ基準（新規則第34条の10）

「本製品は 電気通信事業者（移動通信会社、固定通信会社、インターネットプロバイダ等）の通信回線（公衆無線 LAN を含む ）に直接接続することができません。本製品をインターネットに接続する場合は、必ずルータ等を経由し接続してください。」

## Read Before Use

The use of surveillance devices may be prohibited by law in your country. The Network Camera is not only a high-performance web-ready camera but can also be part of a flexible surveillance system. It is the user's responsibility to ensure that the operation of such devices is legal before installing this unit for its intended use.

It is important to first verify that all contents received are complete according to the Package Contents listed below. Take note of the warnings in the Quick Installation Guide before the Network Camera is installed; then carefully read and follow the instructions in the Installation chapter to avoid damage due to faulty assembly and installation. This also ensures the product is used properly as intended.

The Network Camera is a network device and its use should be straightforward for those who have basic networking knowledge. It is designed for various applications including video sharing, general security/surveillance, etc. The Configuration chapter suggests ways to best utilize the Network Camera and ensure proper operations. For creative and professional developers, the URL Commands of the Network Camera section serves as a helpful reference to customizing existing homepages or integrating with the current web server.

## Package Contents

- IZ9361-EH and wall-mount bracket
- Sunshield, hex L wrench x2, T25 L wrench x1, desiccant bag, screws
- M16 waterproof cable gland x1 (other M20 glands pre-installed - for Ethernet and DI/DO).
- Sun shield and screws c
- Software CD
- Quick Installation Guide & alignment sticker

\* T8 key wrench is also used for the hex socket screw on the camera bracket.

### NOTE:

Use the camera only with a DC power supply that is UL listed, and limited power source (LPS) certified. The power supply should bear the UL listed and LPS marks. The power supply should also meet any safety and compliance requirements for the country of use.

### NOTE:

The T and RT models have auto-focus motorized lens. Some of the suffix syntax used in model naming are listed below:

|    |                                     |
|----|-------------------------------------|
| E  | w/ heater for extreme weather       |
| Fx | Focal length w/ number              |
| T  | w/ Remote focus lens                |
| R  | w/ PoE repeater                     |
| H  | w/ High Dynamic Range functionality |

 **NOTE:**

If powered by a power adapter, the adapter should be properly grounded.

 **WARNING:**

These devices (IR LED) emit highly concentrated infrared light, which view angle (range) is smoothly varied depending on operation mode. To avoid risk of eye injury, please do not look directly at the LEDs at a near distance and remember to use the camera live view to check if the IR illumination is active.

 **NOTE:**

Camera Hardware Preventative Maintenance:

1. Visual inspection of all major components including accessories, cabling and connections where accessible for signs of deterioration or damage.
2. Check and clean cameras, lenses and housings inside and out as needed.
  - Please do not scratch, damage, or leave fingerprints on the dome/front cover and/or lens because this may decrease image quality.
  - For general cleaning of dirty areas, it is suggested to use compressed air to remove dust and/or other debris in order not to damage the on-board components.
  - In order to clean oil stains, it is recommended to use a spray-type decomposing cleaner (absolutely avoid reciprocating wipes on the surface). After the oil has decomposed, spray it with water, dry with air, and/or absorb water with a cotton cloth or a soft cloth (dab, please avoid wiping).
  - Do not use harsh detergents, gasoline, benzene or acetone, etc. to clean as they may deform or cause damage to the product. Also, excessive cleaning could damage the surface.
3. Check images for correct field of view (pan, tilt and zoom focus) and adjust as necessary.
4. Check and replace the Micro SD memory card as needed.
  - Stop edge recording before removing the Micro SD memory card.
  - Make sure that the Micro SD memory card is right side up and do not insert it with force, otherwise it may be damaged.
  - When it is raining or the humidity is high, insertion or ejection of the Micro SD memory card is not recommended.
5. Disassembly of the dome/front cover carries the risk of internal dew condensation, so please remember to replace the desiccant bags on the inside of the cameras before reassembly.
6. Check that the camera view has not been blocked by obstacles and that you can see the property perimeter clearly.
7. Make sure the interiors of cameras and accessories, like mounting kits and/or enclosures, are clean and dry.
8. Make sure cameras are securely attached to the wall/ceiling/mounting kits.

**NOTE:**

*The metadata information can only be transmitted through the HTTP main port. Metadata is not available through the secondary HTTP port.*

**IMPORTANT:**

1. Please contact VIVOTEK's certified dealers for power adapters.
2. Installation and maintenance service should only be performed by qualified technicians.
3. If powered by a power adapter, the adapter should be properly grounded.
4. The power cord must be connected to a socket or outlet with a ground connection.

**IMPORTANT:**

1. The product must be installed and protected in a location that is not easily accessible, and is away from impacts or heavy vibration. For example, at the location where the surveillance cameras are looking down or installed at high positions such as on a wall, or at least 3 meters above the ground.
2. The camera should be installed at least 10 centimeters away from the eave of a building.
3. If powered by a power adapter, the adapter should be properly grounded.
4. Maintenance and repair work must always be carried out by qualified technical personnel.
5. Disconnect power from the unit when performing a maintenance task.
6. Please contact VIVOTEK's certified dealers for power adapters.

**IMPORTANT:**

1. The camera is only to be connected to PoE networks without routing to outside plants.
2. For PoE connection, use only UL listed I.T.E. with PoE output.

1. La caméra ne doit être raccordée qu'à des réseaux PoE, sans routage vers des installations extérieures.
2. Pour les raccordements PoE, utilisez uniquement un équipement de TI homologué UL, avec une sortie PoE.

Use the camera only with a DC power supply that is UL listed, and limited power source (LPS) certified. The power supply should bear the UL listed and LPS marks. The power supply should also meet any safety and compliance requirements for the country of use.

n'utilisez la caméra qu'avec un bloc d'alimentation CC homologué UL, ainsi qu'avec une alimentation limitée (LPS) certifiée. Le bloc d'alimentation doit porter les indications d'homologation UL et LPS. Il doit également répondre aux exigences en matière de sécurité et de conformité relatives au pays d'utilisation.

## IMPORTANT:

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

- To send URL commands in the address bar of your web browser, please remember to disable the Cross-Site Request Forgery (CSRF) protection in Configuration > Security > Miscellaneous.

- For up-to-date documentation of URL commands, please go to VIVOTEK's website, register an account with a business mail address and submit for authorization for SDK in Support > Downloads > SDK.

- For any further technical support, please contact our technical support department.

## Symbols and Statements in this Document

**INFORMATION:** provides important messages or advices that might help prevent inconvenient or problem situations.

**NOTE:** Notices provide guidance or advices that are related to the functional integrity of the machine.

**Tips:** Tips are useful information that helps enhance or facilitate an installation, function, or process.

**WARNING: or IMPORTANT:** These statements indicate situations that can be dangerous or hazardous to the machine or you.

**Electrical Hazard:** This statement appears when high voltage electrical hazards might occur to an operator.

## Physical Description

### ● Front View

### IMPORTANT:

If powered by PoE, the IZB9361-EH comes with an embedded heater requires an UPoE switch or injector. The applicable VIVOTEK PoE models are listed below.

| Model                                                                   |
|-------------------------------------------------------------------------|
| AW-IHU-0100, AW-IHU-0200, AW-IHU-0600, AP-GIC-010A-060, AW-GEU-080A-250 |

## Rear View

### ⚠ WARNING:

- These devices (IR LED) emit highly concentrated infrared light, which view angle (range) is smoothly varied depending on operation mode. To avoid risk of eye injury, please do not look directly at the LEDs at a near distance and remember to use the camera live view to check if the IR illumination is active.

## DI/DO Diagram

Dry contact with external DC power source to supply a relay. Dry contact is the safest connection to protect devices.

1. The DO+ pin provides different output voltages depending on the camera model, 12V for this model, and the max. load is 50mA.
2. The max. voltage for DO- pins is 30VDC (External power).  
In order to control AC devices, the above diagram can be taken in consideration. The diagram uses a relay to control the ON/OFF condition of the AC device.
3. An external relay can be triggered by using DO+ or by an external power source, depending on the type of relay you use.
4. In case of using an individual relay (instead of using a relay module), for protection against voltage or current spikes, a transient voltage suppression diode must be connected in parallel with the inductive load.

Wet contact with external DC power source to supply a relay.

Dry contact and using camera's DO+ to supply a relay.

## Hardware Installation

1. Jot down the camera's MAC address for later reference.

2. Attach the included alignment sticker to a preferred location. Drill holes for mounting screws and if applicable, drill a cabling hole.

3. Route cables through the routing hole and the wall mount bracket.

4. Secure the bracket to wall using the included screws.

5. Remove the rear cover using the T25 wrench.

Refer to the diagram below for the pinouts and the cable gauge range.

#### Cable Gauge

|   | Name          | Wire gauge | Current |
|---|---------------|------------|---------|
| 1 | DI/DO         | 1~1.5mm    | 300mA   |
| 2 | Audio IN/OUT  | 2.2~2.8mm  | 300mA   |
| 3 | DC24V & AC24V | 1.3~1.8mm  | 2.5A    |
| 4 | Ethernet      | 4.3 ~ 6mm  | -       |

6. Pass the Ethernet and I/O cables through the waterproof cable gland. Pass the cables through and rubber seal and properly install the components of the cable gland.

7. Insert the cables into the canister, connect cables to the connectors inside, and install the waterproof cable glands to the canister.

8. Replace the desiccant bag on the rear cover. The desiccant bag comes with an adhesive tape.

9. Install the rear cover.

10. 10-1. Push the spring mortise.  
10-2. Hook the notched bracket onto the groove within the spring mortise.

11. With the camera sitting on the bracket, secure the connection by fastening another two hex socket screws on the other side.

12. Loosen the hex socket screw at the bottom of the bracket, and then turn and aim the camera at the preferred direction. Adjust the shooting direction and tilt angle. When done, tighten the screw.

13. Install the sun shield by fastening 4 retention screws.

The camera can be powered either by a DC/AC 24V 3.5A power adaptor or by a PoE switch. If powered by PoE, make sure the PoE switch can deliver a 60W output per port to drive the IR lights and heater in a low temperature environment.

**- OR -**

**24V 2A/3.5A**

14. Install the "Installation Wizard 2" software utility on your software CD.

15. The program will search for VIVOTEK Video Receivers, Video Servers or Network Cameras on the same LAN.

16. Double-click on the camera's MAC address to open a browser management session with the camera.

17. With a live view is displayed on your laptop, adjust to obtain an optimal image. Check the live view to ensure the image is in focus.

## LED Definitions

|                 | Item | LED status                                                                                                | Description                                   |
|-----------------|------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| LED Definitions | 1    | Steady <b>Red</b>                                                                                         | Powered and system booting, or network failed |
|                 |      | <b>Red</b> LED off                                                                                        | Power off                                     |
|                 |      | <b>Green</b> LED off                                                                                      | Network is disconnected                       |
|                 | 2    | Steady <b>Red</b> and <b>Green</b> LED blinks every 1 sec.                                                | Connected to network                          |
|                 | 3    | <b>Green</b> LED blinks every 1 sec. and <b>RED</b> LED blinks consecutively every 0.15 sec.              | Upgrading firmware                            |
|                 | 4    | <b>Green</b> and <b>RED</b> blink every 0.15 sec, <b>Green</b> and <b>RED</b> light on, then blink again. | Restoring defaults                            |
|                 | 5    | <b>RED</b> LED is on, <b>Green</b> LED blinks and <b>RED</b> LED is constantly on.                        | Status after a reset (network connected)      |
|                 |      | <b>Green</b> and <b>RED</b> LEDs are constantly on.                                                       | Status after a reset (network disconnected)   |

## Hardware Reset

The reset button is used to reset the system or restore the factory default settings. Sometimes resetting the system can return the camera to normal operation. If the system problems remain after reset, restore the factory settings and install again.

Reset: Press the recessed reset button. Wait for the Network Camera to reboot.

Restore: Press and hold the reset button until the status LED rapidly blinks. Note that all settings will be restored to factory default. Upon successful restore, the status LED will blink green and red during normal operation.

## SD/SDHC/SDXC Card Capacity

This network camera is compliant with **SD/SDHC/SDXC 16GB / 8GB / 32GB / 64GB / , and up to 512 / 1024GB** and other preceding standard SD cards.

## Network Deployment

### NOTE:

1. The camera is only to be connected to PoE networks without routing to outside plants.
2. For PoE connection, use only UL listed I.T.E. with PoE output.

### Internet connection via a router

Before setting up the Network Camera over the Internet, make sure you have a router and follow the steps below.

1. Connect your Network Camera behind a router, the Internet environment is illustrated below. Regarding how to obtain your IP address, please refer to Software Installation on page 23 for details.

2. In this case, if the Local Area Network (LAN) IP address of your Network Camera is 192.168.0.3, please forward the following ports for the Network Camera on the router.

- HTTP port: default is 80
- RTSP port: default is 554
- RTP port for video: default is 5556
- RTCP port for video: default is 5557

If you have changed the port numbers on the Network page, please open the ports accordingly on your router. For information on how to forward ports on the router, please refer to your router's user's manual.

3. Find out the public IP address of your router provided by your ISP (Internet Service Provider). Use the public IP and the secondary HTTP port to access the Network Camera from the Internet. Please refer to Network Type on page 80 for details.

## Internet connection with static IP

Choose this connection type if you are required to use a static IP for the Network Camera. Please refer to LAN setting on page 79 for details.

## Internet connection via PPPoE (Point-to-Point over Ethernet)

Choose this connection type if you are connected to the Internet via a DSL Line. Please refer to PPPoE on page 80 for details.

Configure the router, virtual server or firewall, so that the router can forward any data coming into a preconfigured port number to a network camera on the private network, and allow data from the camera to be transmitted to the outside of the network over the same path.

| From                | Forward to      |
|---------------------|-----------------|
| 122.146.57.120:8000 | 192.168.2.10:80 |
| 122.146.57.120:8001 | 192.168.2.11:80 |
| ...                 | ...             |

When properly configured, you can access a camera behind the router using the HTTP request such as follows: `http://122.146.57.120:8000`

If you change the port numbers on the Network configuration page, please open the ports accordingly on your router. For example, you can open a management session with your router to configure access through the router to the camera within your local network. Please consult your network administrator for router configuration if you have troubles with the configuration.

For more information with network configuration options (such as that of streaming ports), please refer to Configuration > Network Settings. VIVOTEK also provides the automatic port forwarding feature as an NAT traversal function with the precondition that your router must support the UPnP port forwarding feature.

## Software Installation

20. Install the **Shepherd** utility, which helps you locate and configure your Network Camera in the local network. If your camera comes without the CD, go to VIVOTEK's website, and locate the utility in the Downloads > Software page.

20-1. Run the Shepherd utility.

20-2. The program will conduct an analysis of your network environment.

20-3. The program will search for all VIVOTEK network devices on the same LAN.

20-4. After a brief search, the installer window will prompt. Click on the MAC and model name that matches the one printed on the product label. You can then double-click on the address to open a management session to the Network Camera.

## Forceful Password Configuration

21. The first time you log in to the camera, the firmware will prompt for a password configuration for security concerns.

21-1. Since your camera is used for the first time, there is no password. Enter “root” as the user name, and nothing for the password.

21-2. Enter the combination of alphabetic and numeric characters to fulfill the password strength requirement. The default name for the camera administrator is “root”, and can not be changed. At least 8 characters, and 8 to 64 characters are allowed.

[Language](#)

---

### Configure password

Password should meet the following requirements:

- \*8-64 characters with no spaces
- \*include at least one alphabetic character
- \*include at least one numeric character

User name :

root

User password :

Medium

Confirm user password :

☐ Enable HTTPS secure connection

\*The new password will be applied to all connections

Next

Cancel

Some, but not all special ASCII characters are supported: !, \$, %, -, ., @, ^, \_, and ~. You can use them in the password combination.

21-3. Another prompt will request for the password you just configured. Enter the password and then you can start configure your camera and see the live view.

## Cybersecurity

Once you open the web console, enter **Configuration > Applications > Package management**, and click on Trend Micro IoT Security. Turn on the protection to fend off cyber attacks.

In here, you can let the camera automatically update the virus codes or manually update the virus codes.

The screenshot displays the VIVOTEK web console interface. The top navigation bar includes 'Home', 'Client settings', 'Configuration', and 'Language'. The left sidebar lists various system functions. The main content area is titled 'Applications > Package management' and features a 'Package' tab. Under this tab, there is an 'Upload package' section with a file selection button and an 'Upload' button. Below this is a 'Resource status' section showing CPU loading at 42%, internal storage total size of 1951.828 MB with 1803.769 MB free, and memory total size of 1986.105 MB with 1213.089 MB free. A 'Clean internal storage' section contains a warning message and a 'Cleanup' button. The 'Package list' section displays a table with columns for Name, Version, Status, License, and Size. The table lists three packages: Trend Micro IoT Security (Version 1.3e.a1.8.1, Status Installed, License N/A, Size 6.246 MB), Deep Learning VCA (Version 6.6.4.0-3e, Status ON, License N/A, Size 17.039 MB), and Stratocast (Version 1.3e.a1.5.0, Status ON, License N/A, Size 3.066 MB). At the bottom of the package list are buttons for 'Start', 'Stop', and 'Schedule'.

Trend Micro IoT Security On/Off ☒

Auto Update ☒

Manual Update:

Select Signature File :

### Event Tigger for 3rd party Software

Brute force attack ☒

Cyber attack ☒

Quarantine event ☒

License Expiration event ☒

### Attack Block Summary

Since 2020/05/05, block total 0 hits

## Ready to Use

1. A browser session with the Network Camera should prompt as shown below.
2. You should be able to see live video from your camera. You may also install the 32-channel recording software from VIVOTEK's website in a deployment consisting of multiple cameras. For its installation details, please refer to its related documents.

### IMPORTANT:

- The "E" models, e.g., IZ9361-EH, are able to operate in low temperature environments. However, when starting these cameras in a very low temperature condition, e.g.,  $-40^{\circ}\text{C}$ , the embedded heater may take half an hour to warm up the camera. When the temperature within the canister reaches  $-10^{\circ}\text{C}$ , the camera automatically starts.

# Accessing the Network Camera

This chapter explains how to access the Network Camera through web browsers, RTSP players, 3GPP-compatible mobile devices, and VIVOTEK recording software.

## Using Web Browsers

Use the Shepherd utility to access to the Network Cameras on the LAN.

If your network environment is not a LAN, follow these steps to access the Network Camera:

1. Launch your web browser (e.g., Microsoft® Internet Explorer or Mozilla Firefox).
2. Enter the IP address of the Network Camera in the address field. (A temporary IP will be generated for the camera. Find it in your Network Neighborhood). Press **Enter**.
3. Live video will display in your web browser.
4. If it is the first time installing the VIVOTEK network camera, an information bar will pop up as shown below. Follow the instructions to install the required plug-in on your computer.

### NOTE:

VLC player supports H.265/H.264/MPEG-4/MJPEG, and all audio codecs supported by VIVOTEK's cameras.

- By default, the Network Camera is not password-protected. To prevent unauthorized access, it is highly recommended to set a password for the Network Camera.  
For more information about how to enable password protection, please refer to Security on page 99.
- If you see a dialog box indicating that your security settings prohibit running ActiveX® Controls, please enable the ActiveX® Controls for your browser.

1. Choose Tools > Internet Options > Security > Custom Level.

2. Look for Download signed ActiveX® controls; select Enable or Prompt. Click **OK**.

3. Refresh your web browser, then install the ActiveX® control. Follow the instructions to complete installation.

**IMPORTANT:**

- Currently the Network Camera utilizes a 32-bit ActiveX plugin. You CAN NOT open a management/view session with the camera using a 64-bit IE browser.
- If you encounter this problem, try execute the Iexplore.exe program from C:\Windows\SysWOW64. A 32-bit version of IE browser will be installed.
- On Windows 7, the 32-bit explorer browser can be accessed from here:  
[C:\Program Files \(x86\)\Internet Explorer\Iexplore.exe](C:\Program Files (x86)\Internet Explorer\Iexplore.exe)
- If you open a web session from the IW2 utility, a 32-bit IE browser will be opened.

**Tips:**

1. The onscreen Java control can malfunction under the following situations: A PC connects to different cameras that are using the same IP address (or the same camera running different firmware versions). Removing your browser cookies will solve this problem.
2. If you encounter problems with displaying the configuration menus or UI items, try disable the Compatibility View on IE8 or IE9.

You may also press the F12 key to open the developer tools utility, and then change the Browser Mode to the genuine IE8 or IE9 mode.

- In the event of plug-in compatibility issues, you may try to uninstall the plug-in that was previously installed.

## Using RTSP Players

To view the streaming media using RTSP players, you can use one of the following players that support RTSP streaming.

### VLC media player

1. Launch the RTSP player.
2. Choose File > Open URL. A URL dialog box will pop up.
3. The address format is `rtsp://<ip address>:<rtsp port>/<RTSP streaming access name for stream1 or stream2>`

As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 87.

For example:

4. The live video will be displayed in your player.  
For more information on how to configure the RTSP access name, please refer to RTSP Streaming on page 87 for details.

## Using 3GPP-compatible Mobile Devices

To view the streaming media through 3GPP-compatible mobile devices, make sure the Network Camera can be accessed over the Internet. For more information on how to set up the Network Camera over the Internet, please refer to Setup the Network Camera over the Internet on page 21.

To utilize this feature, please check the following settings on your Network Camera:

1. Because most players on 3GPP mobile phones do not support RTSP authentication, make sure the authentication mode of RTSP streaming is set to disable.  
For more information, please refer to RTSP Streaming on page 87.
2. As the the bandwidth on 3G networks is limited, you will not be able to use a large video size. Please set the video and audio streaming parameters as listed below.  
For more information, please refer to Stream settings on page 70.

|                                   |           |
|-----------------------------------|-----------|
| Video Mode                        | MPEG-4    |
| Frame size                        | 176 x 144 |
| Maximum frame rate                | 5 fps     |
| Intra frame period                | 1S        |
| Video quality (Constant bit rate) | 40kbps    |
| Audio type (GSM-AMR)              | 12.2kbps  |

3. As most ISPs and players only allow RTSP streaming through port number 554, please set the RTSP port to 554. For more information, please refer to RTSP Streaming on page 87.
4. Launch the player on the 3GPP-compatible mobile devices (e.g., Real Player).
5. Type the following URL commands in the URL field.  
The address format is `rtsp://<public ip address of your camera>:<rtsp port>/<RTSP streaming access name for stream 3>`.  
For example:

You can configure Stream #2 into the suggested stream settings as listed above for live viewing on a mobile device.

## Using VIVOTEK Recording Software

Visit our website for download the VAST recording software that provides simultaneous monitoring and video recording for multiple Network Cameras. Please install the recording software; then launch the program to add the Network Camera to the Channel list. For detailed information about how to use the recording software, please refer to the user's manual of the software or download it from <http://www.vivotek.com>.

### Tips:

1. If you encounter problems with displaying live view or the onscreen plug-in control, you may try to remove the plug-ins that might have been installed on your computer. Remove the following folder: C:\Program Files (x86)\Camera Stream Controller\.
2. If you forget the root (administrator) password for the camera, you can restore the camera defaults by pressing the reset button for longer than 5 seconds.
3. If DHCP is enabled in your network, and the camera cannot be accessed, run the Shepherd utility to search the network. If the camera has been configured with fixed IP that does not comply with your local network, you may see its default IP 169.254.x.x. If you still cannot find the camera, you can restore the camera to its factory defaults.
4. If you change your network parameters, e.g., added a connection to a LAN card, re-start the Shepherd utility.

# Main Page

This chapter explains the layout of the main page. It is composed of the following sections: VIVOTEK INC. Logo, Host Name, Camera Control Area, Configuration Area, Menu, and Live Video Window.

If mounted on a PTZ scanner, you can configure the corresponding command protocol and select Mechanical as the PTZ control interface. A PTZ panel will then be available on screen.

## VIVOTEK INC. Logo

Click this logo to visit the VIVOTEK website.

## Host Name

The host name can be customized to fit your needs. The name can be changed especially there are many cameras in your surveillance deployment. For more information, please refer to System on page 46.

## Camera Control Area

**Profile mode:** 3 pre-configured streaming profiles are provided through here: Max. view, Recording view, Live view. Each mode features a different stream source (channel), resolution, multicast, and metadata configuration.

**Manual Trigger:** Click to enable/disable an event trigger manually. Please configure an event setting on the Application page before you enable this function. A total of 3 event configuration can be configured. For more information about event setting, please refer to page 117. If you want to hide this item on the homepage, please go to **Configuration > System > Homepage Layout > General settings > Customized button** to deselect the “show manual trigger button” checkbox.

**Digital Output:** Click to manually turn the digital output device on or off.

**PTZ Control:** Select the Optical Zoom or the Mechanical PTZ control (if mounted on a scanner). See PTZ configuration on page 117.

**Heater Control:**

The heater control button allows you to manually turn on the embedded heater. You may want to pre-heat the camera to prevent frost on the camera dome cover, etc. Note that the manual heater control does not violate the preset temperature thresholds on the camera, e.g., heater automatically starts at -10°C, and heater turns off at 26°C.

**Home:** Returns to the Home position if digital preset positions have been configured.

**Zoom /Focus +/-:** Allows you to manually zoom in/out and adjust the image focus. You can also use your mouse wheel or buttons on a joystick to zoom in or zoom out.

**Zoom /Focus speed:** Adjust the speed of zoom lens module with Zoom/ Focus actions when you zoom in or zoom out.

## Configuration Area

**Client Settings:** Click this button to access the client setting page. For more information, please refer to Client Settings on page 40.

**Configuration:** Click this button to access the configuration page of the Network Camera. It is suggested that a password be applied to the Network Camera so that only the administrator can configure the Network Camera. For more information, please refer to Configuration on page 45.

**Language:** Click this button to choose a language for the user interface. Language options are available in: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文. Please note that you can also change a language on the Configuration page; please refer to page 45.

## Hide Button

You can click the hide button to hide or display the control panel.

## Resize Buttons

Click the Auto button, the video cell will resize automatically to fit the monitor.

Click 100% is to display the original homepage size.

Click 50% is to resize the homepage to 50% of its original size.

Click 25% is to resize the homepage to 25% of its original size.

## Live Video Window

- The following window is displayed when the video mode is set to H.264 or H.265:  
H.265/H.264 Protocol and Media Options

**Video Title:** The video title can be configured. For more information, please refer to Video Settings on page 70.

**H.264 or H.265 Protocol and Media Options:** The transmission protocol and media options for H.264 or H.265 video streaming. For further configuration, please refer to Client Settings on page 40.

**Time:** Display the current time. For further configuration, please refer to Media > Image > General settings on page 60.

**Title and Time:** The video title and time can be stamped on the streaming video. For further configuration, please refer to Media > Image > General settings on page 63.

**Video Control Buttons:** Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

 **Snapshot:** Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (\*.jpg) or BMP (\*.bmp) format.

 **Digital Zoom:** Click and uncheck “Disable digital zoom” to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

 **Pause:** Pause the transmission of the streaming media. The button becomes the  **Resume** button after clicking the Pause button.

 **Stop:** Stop the transmission of the streaming media. Click the  **Resume** button to continue transmission.

 **Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  **Stop MP4 Recording** button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 41 for details.

 **Volume:** When the  **Mute** function is not activated, move the slider bar to adjust the volume on the local computer.

 **Mute:** Turn off the volume on the local computer. The button becomes the  **Audio On** button after clicking the Mute button.

 **Talk:** Click this button to talk to people around the Network Camera. Audio will project from the external speaker connected to the Network Camera. Click this button  again to end talking transmission.

 **Mic Volume:** When the  **Mute** function is not activated, move the slider bar to adjust the microphone volume on the local computer.

#### NOTE:

1. For a megapixel camera, it is recommended to use monitors of the 24" size or larger, and are capable of 1600x1200 or better resolutions.
2. Below are the defaults for **Audio** settings:  
 For cameras with built-in microphone: **Not Muted**.  
 For cameras without built-in microphone: **Muted**.

To receive audio input from an external microphone, you may need to enable the audio input from **Media > Audio**. Refer to page 77 for more information.

 **Mute:** Turn off the  Mic volume on the local computer. The button becomes the  Mic On button after clicking the Mute button.

 **Full Screen:** Click this button to switch to full screen mode. Press the “Esc” key to switch back to normal mode.

■ The following window is displayed when the video mode is set to MJPEG:

**Video Title:** The video title can be configured. For more information, please refer to Media > Image on page 63.

**Time:** Display the current time. For more information, please refer to Media > Image on page 63.

**Title and Time:** Video title and time can be stamped on the streaming video. For more information, please refer to Media > Image on page 63.

**Video Control Buttons:** Depending on the Network Camera model and Network Camera configuration, some buttons may not be available.

 **Snapshot:** Click this button to capture and save still images. The captured images will be displayed in a pop-up window. Right-click the image and choose **Save Picture As** to save it in JPEG (\*.jpg) or BMP (\*.bmp) format.

 **Digital Zoom:** Click and uncheck “Disable digital zoom” to enable the zoom operation. The navigation screen indicates the part of the image being magnified. To control the zoom level, drag the slider bar. To move to a different area you want to magnify, drag the navigation screen.

 **Start MP4 Recording:** Click this button to record video clips in MP4 file format to your computer. Press the  Stop MP4 Recording button to end recording. When you exit the web browser, video recording stops accordingly. To specify the storage destination and file name, please refer to MP4 Saving Options on page 41 for details.

 **Full Screen:** Click this button to switch to full screen mode. Press the “Esc” key to switch back to normal mode.

# Client Settings

This chapter explains how to select the stream transmission mode and saving options on the local computer. When completed with the settings on this page, click **Save** on the page bottom to enable the settings.

## H.265/H.264 Media Options

**H.265/H.264 media options**

Video and audio

Select to stream video or audio data or both. This is enabled only when the video mode is set to H.264.

## H.265/H.264 Protocol Options

**H.265/H.264 protocol options**

TCP

Depending on your network environment, there are four transmission modes of H.264 streaming:

**UDP unicast:** This protocol allows for more real-time audio and video streams. However, network packets may be lost due to network burst traffic and images may be broken. Activate UDP connection when occasions require time-sensitive responses and the video quality is less important. Note that each unicast client connecting to the server takes up additional bandwidth and the Network Camera allows up to ten simultaneous accesses.

**UDP multicast:** This protocol allows multicast-enabled routers to forward network packets to all clients requesting streaming media. This helps to reduce the network transmission load of the Network Camera while serving multiple clients at the same time. Note that to utilize this feature, the Network Camera must be configured to enable multicast streaming at the same time. For more information, please refer to RTSP Streaming on page 87.

**TCP:** This protocol guarantees the complete delivery of streaming data and thus provides better video quality. The downside of this protocol is that its real-time effect is not as good as that of the UDP protocol.

**HTTP:** This protocol allows the same quality as TCP protocol without needing to open specific ports for streaming under some network environments. Users inside a firewall can utilize this protocol to allow streaming data through.

## Two way audio

**Two way audio**

☒ Half-duplex  
☐ Full-duplex

**Half duplex:** Audio is transmitted from one direction at a time, e.g., from a PC holding a web console with the camera.

**Full duplex:** Audio is transmitted in both directions simultaneously.

## MP4 Saving Options

**MP4 saving options**

Folder:

File name prefix:

☒ Add date and time suffix to file name

Users can record live video as they are watching it by clicking  Start MP4 Recording on the main page. Here, you can specify the storage destination and file name.

**Folder:** Specify a storage destination on your PC for the recorded video files. The location can be changed.

**File name prefix:** Enter the text that will be appended to the front of the video file name. A specified folder will be automatically created on your local hard disk.

**Add date and time suffix to the file name:** Select this option to append the date and time to the end of the file name.

**CLIP\_20150321-180853**

  
 File name prefix

  
 Date and time suffix  
 The format is: YYYYMMDD\_HHMMSS

## Local Streaming Buffer Time

**Local streaming buffer time**

Millisecond

In the case of encountering unsteady bandwidth, live streaming may lag and video streaming may not be very smoothly. If you enable this option, the live streaming will be stored temporarily on your PC's cache memory for a few milli seconds before being played on the live viewing window. This will help you see the streaming more smoothly. If you enter 3,000 Millisecond, the streaming will delay for 3 seconds.

## Joystick settings

### Enable Joystick

Connect a joystick to a USB port on your management computer. Supported by the plug-in (Microsoft's DirectX), once the plug-in for the web console is loaded, it will automatically detect if there is any joystick on the computer. The joystick should work properly without installing any other driver or software.

Then you can begin to configure the joystick settings of connected devices. Please follow the instructions below to enable joystick settings.

1. Select a detected joystick, if there are multiple, from the Selected joystick menu. If your joystick is not detected, it may be defective.
2. Click Calibrate or Configure buttons to configure the joystick-related settings.

**Joystick settings**

Selected joystick: Macally AirStick

Calibrate Configure buttons

Save

### NOTE:

- If you want to assign Preset actions to your joystick, the preset locations should be configured in advance in the **Configuration > PTZ** page. In Windows, use the search function on the Start menu to search for Game Controller.
- If your joystick is not working properly, it may need to be calibrated. Click the **Calibrate** button to open the Game Controllers window located in Microsoft Windows control panel and follow the instructions for trouble shooting.
- The joystick will appear in the **Game Controllers** list in the Windows Control panel. If you want to check out for your devices, go to the following page: Start -> Control Panel -> Game Controllers.

## Buttons Configuration

In the Button Configuration window, the left column shows the actions you can assign, and the right column shows the functional buttons and assigned actions. The number of buttons may differ from different joysticks.

Please follow the steps below to configure your joystick buttons:

1. Choosing one of the actions and click **Assign** will pop up a dialog. Then you can assign this action to a button by pressing the joystick button or select it from the drop-down list.

For example: Assign **Home** (move to home position) to Button 1.

2. Click **OK** to confirm the configuration.

## Buttons Configuration

Click the **Configure Buttons** button, a window will prompt as shown below. Please follow the steps below to configure your joystick buttons:

1. Select a button number from the Button # pull-down menu.

### Tips:

If you are not sure of the locations of each button, use the **Properties** window in the **Game Controllers** utility.

2. Select a corresponding action, such as Patrol or Preset#.

3. Click the **Assign** button to assign an action to the button. You can delete an association by selecting a button number, and then click the **Delete** button.

Repeat the process until you are done with the configuration of all preferred actions.

The buttons you define should appear on the button list accordingly.

4. Please remember to click the **Save** button on the Client settings page to preserve your settings.

# Configuration

Click **Configuration** on the main page to enter the camera setting pages. Note that only Administrators can access the configuration page.

VIVOTEK provides an easy-to-use user interface that helps you set up your network camera with minimal effort. In order to simplify the user interface, detailed information will be hidden unless you click on the function item. When you click on the first sub-item, the detailed information for the first sub-item will be displayed; when you click on the second sub-item, the detailed information for the second sub-item will be displayed and that of the first sub-item will be hidden.

The following is the interface of the main page:

Each function on the configuration list will be explained in the following sections.

The Navigation Area provides access to all different views from the **Home** page (for live viewing), **Configuration** page, and multi-language selection.

## System > General settings

This section explains how to configure the basic settings for the Network Camera, such as the host name and system time. It is composed of the following two columns: System, and System Time. When finished with the settings on this page, click **Save** at the bottom of the page to enable the settings.

### System

**System**

Host name:

☐ Turn off the LED indicator

Host name: Enter a desired name for the Network Camera. The text will be displayed at the top of the main page, and also on the view cells of the ST7501 and VAST management software.

Turn off the LED indicators: If you do not want others to notice the network camera is in operation, you can select this option to turn off the LED indicators.

## System time

**Keep current date and time:** Select this option to preserve the current date and time of the Network Camera. The Network Camera's internal real-time clock maintains the date and time even when the power of the system is turned off.

**Synchronize with computer time:** Select this option to synchronize the date and time of the Network Camera with the local computer. The read-only date and time of the PC is displayed as updated.

**Manual:** The administrator can enter the date and time manually. Note that the date and time format are [yyyy/mm/dd] and [hh:mm:ss].

**Automatic:** The Network Time Protocol is a protocol which synchronizes computer clocks by periodically querying an NTP Server.

**NTP server:** Assign the IP address or domain name of the time-server. Leaving the text box blank connects the Network Camera to the default time servers. The precondition is that the camera must have the access to the Internet.

**Update interval:** Select to update the time using the NTP server on an hourly, daily, weekly, or monthly basis.

**Time zone :** Select the appropriate time zone from the list. You can scroll down on the Time zone menu to find the Customize option and use the POSIX TZ variables. For example, [http://www.gnu.org/software/libc/manual/html\\_node/TZ-Variable.html](http://www.gnu.org/software/libc/manual/html_node/TZ-Variable.html).

Here are some examples for TZ values, including the appropriate Daylight Saving Time and its dates of applicability. In North American Eastern Standard Time (EST) and Eastern Daylight Time (EDT), the normal offset from UTC is 5 hours; since this is west of the prime meridian, the sign is positive. Summer time begins on March's second Sunday at 2:00am, and ends on November's first Sunday at 2:00am. EST+5EDT,M3.2.0/2,M11.1.0/2

Israel Standard Time (IST) and Israel Daylight Time (IDT) are 2 hours ahead of the prime meridian in winter, springing forward an hour on March's fourth Thursday (i.e., on the first Friday on or after March 23), and falling back on October's last Sunday.  
IST-2IDT,M3.4.4,M10.5.0

Western Argentina Summer Time (WARST) is 3 hours behind the prime meridian all year. There is a dummy fall-back transition on December 31 at 25:00 daylight saving time (i.e., 24:00 standard time, equivalent to January 1 at 00:00 standard time), and a simultaneous spring-forward transition on January 1 at 00:00 standard time, so daylight saving time is in effect all year and the initial WART is a placeholder.

The format is TZ = local\_timezone,date/time,date/time.

Here, date is in the Mm.n.d format, where:

Mm (1-12) for 12 months

n (1-5) 1 for the first week and 5 for the last week in the month

d (0-6) 0 for Sunday and 6 for Saturday

CST6CDT is the name of the time zone

CST is the abbreviation used when DST is off

6 hours is the time difference from GMT

CDT is the abbreviation used when DST is on

,M3 is the third month

.2 is the second occurrence of the day in the month

.0 is Sunday

/2 is the time

,M11 is the eleventh month

.1 is the first occurrence of the day in the month

.0 is Sunday

/2 is the time

The minimum specifier is down to the hour.

## System > Homepage layout

This section explains how to set up your own customized homepage layout.

### General settings

This column shows the settings of your homepage layout. You can manually select the background and font colors in Theme Options (the second tab on this page). The settings will be displayed automatically in this Preview field. The following shows the homepage using the default settings:

- **Hide Powered by VIVOTEK:** If you check this item, it will be removed from the homepage.

### Logo graph

Here you can change the logo that is placed at the top of your homepage.

**Logo graph**

A customized logo (Gif, JPG or PNG) can be uploaded for main page. It will be resized to 160x50 pixels to replace the previous logo.

☐ Default
 ☒ Custom

Logo link:

Follow the steps below to upload a new logo:

1. Click **Custom** and the Browse field will appear.
2. Select a logo from your files.
3. Click **Upload** to replace the existing logo with a new one.
4. Enter a website link if necessary.
5. Click **Save** to enable the settings.

### Customized button

If you want to hide manual trigger buttons on the homepage, please uncheck this item. This item is checked by default.

**Customized button**

☒ Show manual trigger button

## Theme Options

Here you can change the color of your homepage layout. There are three types of preset patterns for you to choose from. The new layout will simultaneously appear in the **Preview** filed. Click **Save** to enable the settings.

■ Follow the steps below to set up the customized homepage:

1. Click **Custom** on the left column.
2. Click the field where you want to change the color on the right column.

3. The palette window will pop up as shown below.

4. Drag the slider bar and click on the left square to select a desired color.
5. The selected color will be displayed in the corresponding fields and in the **Preview** column.
6. Click **Save** to enable the settings.

## System > Logs

This section explains how to configure the Network Camera to send the system log to a remote server as backup.

### Log server settings

**Log server settings**

☒ Enable remote log

IP address:

port:

**Save**

Follow the steps below to set up the remote log:

1. Select **Enable remote log**.
2. In the IP address text box, enter the IP address of the remote server.
2. In the port text box, enter the port number of the remote server.
3. When completed, click **Save** to enable the setting.

You can configure the Network Camera to send the system log file to a remote server as a log backup. Before utilizing this feature, it is suggested that the user install a log-recording tool to receive system log messages from the Network Camera. An example is Kiwi Syslog Daemon. Visit <http://www.kiwisyslog.com/kiwi-syslog-daemon-overview/>.

| Date       | Time     | Priority      | Hostname      | Message                                                                                              |

This column displays the system log in a chronological order. The system log is stored in the Network Camera's buffer area and will be overwritten when reaching a certain limit.

You can install the included VAST recording software, which provides an Event Management function group for delivering event messages via emails, GSM short messages, onscreen event panel, or to trigger an alarm, etc. For more information, refer to the VAST User Manual.

## Access log

Save

System log

```

## System > Maintenance

This chapter explains how to restore the Network Camera to factory default, upgrade firmware version, etc.

### General settings > Upgrade firmware

Upgrade firmware

Select firmware file:

This feature allows you to upgrade the firmware of your Network Camera. It takes a few minutes to complete the process.

**Note: Do not power off the Network Camera during the upgrade!**

Follow the steps below to upgrade the firmware:

1. Download the latest firmware file from the VIVOTEK website. The file is in .pkg file format.
2. Click **Browse...** and locate the firmware file.
3. Click **Upgrade**. The Network Camera starts to upgrade and will reboot automatically when the upgrade completes.

If the upgrade is successful, you will see "Reboot system now!! This connection will close". After that, re-access the Network Camera.

The following message is displayed when the upgrade has succeeded.

Reboot system now!!  
This connection will close.

The following message is displayed when you have selected an incorrect firmware file.

Starting firmware upgrade...  
Do not power down the server during the upgrade.  
The server will restart automatically after the upgrade is completed.  
This will take about 1 - 5 minutes.  
Wrong PKG file format  
Unpack fail

## IMPORTANT:

Through extensive use, temporary files may accumulate that disable a firmware upgrade. You can use the Clean up function in the Application > Package management window to solve this problem.

## General settings > Reboot

This feature allows you to reboot the Network Camera, which takes about one minute to complete. When completed, the live video page will be displayed in your browser. The following message will be displayed during the reboot process.

The device is rebooting now. Your browser will reconnect to <http://192.168.5.151:80/>  
If the connection fails, please manually enter the above IP address in your browser.

If the connection fails after rebooting, manually enter the IP address of the Network Camera in the address field to resume the connection.

## General settings > Restore

### Restore

Restore all settings to factory default except settings in

☐ Network ☐ Daylight saving time ☐ Custom language ☐ VADP

Restore

This feature allows you to restore the Network Camera to factory default settings.

**Network:** Select this option to retain the Network Type settings (please refer to Network Type on page 80).

**Daylight Saving Time:** Select this option to retain the Daylight Saving Time settings (please refer to Import/Export files below on this page).

**Custom Language:** Select this option to retain the Custom Language settings.

**VADP:** Retain the VADP modules (3rd-party software stored on the SD card) and related settings.

If none of the options is selected, all settings will be restored to factory default. The following message is displayed during the restoring process.

The device is rebooting now. Your browser will reconnect to <http://192.168.5.151:80/>.  
If the connection fails, please manually enter the above IP address in your browser.

## Import/Export files

This feature allows you to Export / Update daylight saving time rules, custom language file, configuration file, and server status report.

General settings

Import/Export files

### Export files

Export language file

Export

Export configuration file

Export

Export server status report

Export

### Upload files

Update custom language file:

Browse...

Upload

Upload configuration file:

Browse...

Upload

Browse...

The following message is displayed when attempting to upload an incorrect file format.

Export language file: Click to export language strings. VIVOTEK provides nine languages: English, Deutsch, Español, Français, Italiano, 日本語, Português, 簡體中文, and 繁體中文.

Update custom language file: Click **Browse...** and specify your own custom language file to upload.

Export configuration file: Click to export all parameters for the device and user-defined scripts.

Update configuration file: Click **Browse...** to update a configuration file. Please note that the model and firmware version of the device should be the same as the configuration file. If you have set up a fixed IP or other special settings for your device, it is not suggested to update a configuration file.

Export server status report: Click to export the current server status report, such as time, logs, parameters, process status, memory status, file system status, network status, kernel message ... and so on.

### **Tips:**

- If a firmware upgrade is accidentally disrupted, say, by a power outage, you still have a last resort method to restore normal operation. See the following for how to bring the camera back to work:

Applicable scenario:

- (a) Power disconnected during firmware upgrade.
- (b) Unknown reason causing abnormal LED status, and a Restore cannot recover normal working condition.

You can use the following methods to activate the camera with its backup firmware:

- (a) Press and hold down the reset button for at least one minute.
- (b) Power on the camera until the Red LED blinks rapidly.
- (c) After boot up, the firmware should return to the previous version before the camera hanged. (The procedure should take 5 to 10 minutes, longer than the normal boot-up process). When this process is completed, the LED status should return to normal.

## Media > Image

This section explains how to configure the image settings of the Network Camera. It is composed of the following four columns: General settings, Picture settings, Exposure, Focus, and Privacy mask. The Focus window is available only for models that come with motorized lens.

### General settings

The screenshot shows the 'General settings' tab with the 'Video settings' section expanded. The settings include:

- Video title:** A text input field.
- Show timestamp and video title in video and snapshots:** An unchecked checkbox.
- Position of timestamp and video title on image:** A dropdown menu set to 'Top'.
- Timestamp and video title font-size:** A dropdown menu set to '30'.
- Video font (.ttf):** A dropdown menu set to 'Default' and an 'Upload' button.
- Color:** Radio buttons for 'B/W' and 'Color' (selected).
- Power line frequency:** Radio buttons for '50 Hz' and '60 Hz' (selected).
- Video orientation:** Checkboxes for 'Flip', 'Mirror', and 'Rotate' (all unchecked).

#### Video title

Show timestamp and video title in video and snapshots: Enter a name that will be displayed on the title bar of the live video as shown below. A zoom indicator will be displayed on the Home page when you zoom in/out on the live viewing window. You may zoom in/out on the image by scrolling the mouse wheel inside the live viewing window, and the maximum zoom in will be up to 20 times (w/o the digital zoom).

Position of timestamp and video title on image: Select to display time stamp and video title on the top or at the bottom of the video stream.

Timestamp and video title font size: Select the font size for the time stamp and title.

Video font (.ttf): You can select a True Type font file for the display of textual messages on video.

Color: Select to display color or black/white video streams.

Power line frequency: Set the power line frequency consistent with local utility settings to eliminate image flickering associated with fluorescent lights. Note that after the power line frequency is changed, you must disconnect and reconnect the power cord of the Network Camera in order for the new setting to take effect.

**Video orientation:** Flip - vertically reflect the display of the live video; Mirror - horizontally reflect the display of the live video. Select both options if the Network Camera is installed upside-down (e.g., on the ceiling) to correct the image orientation. Please note that if you have preset locations, those locations will be cleared after flip/mirror setting.

### Rotate -

☒ Rotate 90  Degrees

The rotation here indicates clockwise rotation. Rotation can be applied with flip, mirror, and physical lens rotation (see below) settings to adapt to different mounting locations.

The figures in the illustration are shown in a consecutive order.

The camera may be installed on a vertical, side-facing, or tilted surface in order to accommodate the interior or exterior design of a building. The interior of a building can be shaped as a narrow rectangular space, such as a corridor. The conventional HD image, such as that of a 16:9 aspect ratio, will be incongruous with its wide horizontal view. With video rotation, the camera can more readily cover the field of view on a tall and narrow scene.

## Day/Night Settings

— Day/Night settings —

☐ Turn on external IR illuminator in night mode

☒ Turn on built-in IR illuminator in night mode

IR cut filter: Auto mode

Sensitivity of IR cut filter: 51 %

Select auto mode will disable profile of exposure settings.

### Turn on external IR illuminator in night mode

Select this to turn on the external IR illuminator when the camera detects low light condition and enters the night mode. A Digital Output connection to external IR is needed.

### Turn on built-in IR illuminator in night mode

Select this to turn on the camera's onboard IR illuminator when the camera detects low light condition and enters the night mode.

### IR cut filter

With a removable IR-cut filter, this Network Camera can automatically remove the filter to let IR light enter the light sensor during low light conditions.

#### ■ Auto mode

The Network Camera automatically removes the filter by judging the level of ambient light.

#### ■ Day mode

In day mode, the Network Camera switches on the IR cut filter at all times to block infrared light from reaching the sensor so that the colors will not be distorted.

#### ■ Night mode

In night mode, the Network Camera switches off the IR cut filter at all times for the sensor to accept infrared light, thus helping to improve low light sensitivity.

#### ■ Synchronize with digital input

The Network Camera automatically removes the IR cut filter when a Digital Input is triggered. For example, an external IR light may come with its own detection circuits.

#### ■ Schedule mode

The Network Camera switches between day mode and night mode based on a specified schedule. Enter the start and end time for the day mode. Note that the time format is [hh:mm] and is expressed in 24-hour clock time. By default, the start and end time of day mode are set to 07:00 and 18:00.

### Sensitivity of IR cut filter

Tune the responsiveness of the IR cut filter to lighting conditions using the pull bar.

When completed with the settings on this page, click **Save** to enable the settings.

## Image settings

On this page, you can tune the White balance and Image adjustment.

Sensor Setting 2:  
For special situations

Sensor Setting 1:  
For normal situations

White balance: Adjust the value for the best color temperature.

■ You may follow the steps below to adjust the white balance to the best color temperature.

1. Place a sheet of paper of white or cooler-color temperature color, such as blue, in front of the lens, then allow the Network Camera to automatically adjust the color temperature.
2. Click the **On** button to **Fix current value** and confirm the setting while the white balance is being measured.

■ You may also manually tune the color temperature by pulling the RGain and BGain slide bars.

### Image Adjustment

- **Brightness**: Adjust the image brightness level, which ranges from 0% to 100%.
- **Contrast**: Adjust the image contrast level, which ranges from 0% to 100%.
- **Saturation**: Adjust the image saturation level, which ranges from 0% to 100%.
- **Sharpness**: Adjust the image sharpness level, which ranges from 0% to 100%.

Defog: Defog helps improve the visibility quality of captured image in poor weather conditions such as smog, fog, or smoke.

### Noise reduction

- **Enable noise reduction:** Check to enable noise reduction in order to reduce noises and flickers in image. This applies to the onboard 3D Noise Reduction feature. Use the pull-down menu to adjust the reduction strength. Note that applying this function to the video channel will consume system computing power.

3D Noise Reduction is mostly applied in low-light conditions. When enabled in a low-light condition with fast moving objects, trails of after-images may occur. You may then select a lower strength level or disable the function.

Note that the **Preview** button has been cancelled, all changes made to image settings is directly shown on screen. You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the setting. You can also click on **Profile mode** to adjust all settings above in a tabbed window for special lighting conditions.

Enable to apply these settings at: Select the mode this profile to apply to: Day mode, Night mode, or Schedule mode. Please manually enter a range of time if you choose the Schedule mode. Then check **Save** to take effect.

### Image stabilizer

If you experience problems such as vibration on a pole mount, try enable the image stabilizer.

## Exposure

On this page, you can set the Exposure measurement window, Exposure level, Exposure mode, Exposure time, Gain control, and Day/Night mode settings. You can configure two sets of Exposure settings: one for normal situations, the other for special situations, such as the day/night/schedule mode.

**Measurement Window:** This function allows users to set measurement window(s) for low light compensation. For example, where low-light objects are posed against an extremely bright background. You may want to exclude the bright sunlight shining through a building's corridor.

- Full view: Calculate the full range of view and offer appropriate light compensation.
- HLC (High Light Compensation): The camera can detect strong light spots in the scene, and then reduce the effects of the strong spots too acquire a balanced imaging result. This function aims to produce images for recognizing objects in the dark, such as a license plate.

Exposure control:

■ **Exposure level:** You can manually set the Exposure level, which ranges from -0.7 to +0.7 (dark to bright). You can also select other values from the Exposure mode menus and select a preferred scenario or manually configure the associated settings. You may prefer a shorter shutter time to better capture moving objects, while a faster shutter reduces light and needs to be compensated by electrical brightness gains.

■ **Exposure mode:**

Select **Auto**, **Shutter Priority**, **Iris Priority**, or **Manual** mode according to your needs.

- **Auto:** System default, which automatically adjusts the iris, shutter speed, and gain for an optimal exposure level.

- **Shutter Priority:** When selected, the **Exposure time** slide bar will appear, allowing you to select an exposure time ranging from 1/32,000, to 1/8 second. Once a fixed value is selected, system firmware will automatically tune the gain and iris settings to match an optimal exposure level.

- **Iris Priority:** When selected, the **Iris adjustment** slide bar will appear, allowing you to select an aperture size ranging from F16 to F1.6. Once a fixed value is selected, system firmware will automatically tune the gain and exposure time to match an optimal exposure level. The value is measured in the F-number as the ratio of the focal length to the lens diameter. Iris size is inversely proportional to the F-number; therefore, the smaller the F-number, the greater is the exposure ratio. Smaller F-number (larger exposure ratio, largest size of lens aperture opening) is shown on the right of the slide bar.

- **Manual:** Select **Manual** to set a fixed exposure time, iris, and gain. Then, tune the slide bar to set the Exposure time, Iris adjustment, and Gain Control to the best image quality. A shorter exposure time allows less amount of light to enter the sensor; while a higher gain control value generates certain amount of noises.

Note the following when the **Manual** mode is selected:

1. The **Exposure level** bar will not be available.
2. The **IR cut filter** setting will switch to **Day Mode**. If it was previously configured into other modes, the previous setting remains intact.

**Manual:** Note that **WDR** and **Defog** functions will be disabled using the **Manual mode setting**.

**NOTE:**

- When **Iris Priority** is selected for the **Exposure mode**, the tunable aperture size is related to zoom ratio. When using different zoom ratios, the range of aperture sizes can be different. When zoom ratio is 0x, the range of iris sizes is F1.6~F16. When zoom ratio is 20x, the iris size is F3.4.

## ■ WDR Pro:

This refers to the Wide Dynamic Range function that enables the camera to capture details in a high contrast environment. Use the checkbox to enable the function, and use the slide bar to select the strength of the WDR Pro functionality, depending on the lighting condition at the installation site. You can select a higher effect when the contrast is high (between the shaded area and the light behind the objects).

**Enable WDR enhanced:** This function allows users to identify more image details with an extreme contrast from an object of interest with one shadowed side against a bright background, e.g., an entrance. You may select the **Enable WDR enhanced** checkbox, and then adjust the strength (low, medium, high) to reach the best image quality.

You can click **Restore** to recall the original settings without incorporating the changes. When completed with the settings on this page, click **Save** to enable the settings.

If you want to configure another sensor setting for day/night/schedule mode, please click **Profile** to open the Profile of exposure settings page as shown below.

**Activated period:** Select the mode this profile will apply to: Night mode or Schedule mode. Please manually enter a range of time if you choose Schedule mode. Then check **Save** to take effect.

Please follow the steps below to set up a profile:

1. Select the **Profile mode** tab.
2. Select the applicable mode: Night mode or Schedule mode. Please manually enter a range of time if you choose the Schedule mode.
3. Configure Exposure control settings in the following columns. Please refer to previous discussions for detailed information.
4. Click **Save** to enable the setting and click **Close** to exit the page.

## Focus

Focus here refers to the **Remote Focus**, is applicable to Network Cameras that are equipped with stepping motor lens.

Chances are while moving the lens around the surveillance area, focusing can be slow when zooming in on a complex scene with no distinctive objects especially in the center of the field of view. If this occurs, you can select the Custom mode, and configure a Focus window in the middle of the field of view.

With a Focus window in the center or a place you prefer in the FOV, the camera can more rapidly focus on an object of your interest while scanning through the entire surveillance area.

### **Focus window:**

By default, the optimal focus is found on a full view window. You may designate a custom window within your current field of view to acquire the best focus out of it.

- **Full view:** The focus tuning takes place by referring to the full view.
- **Custom:** You can create a focus window and drag it to a place of interest in your view window. Note that it is recommended to use this function only when you have a solid object in your view window that is showing a consistent color or texture. This function will not take effect if you set the focus window on a distant background.

## Privacy mask

Click **Privacy Mask** to open the settings page. On this page, you can block out sensitive zones to address privacy concerns.

- To configure privacy mask windows,
  1. Select a mask color from the pull-down menu.
  2. Enter a name for the mask window and click **Add** to add a new window.
  3. A mask window with a light color frame will appear on screen, click and draw the corner to change its size and drag it to a preferred location. If you install your camera on a PTZ scanner, use the PTZ panel on the upper right to move to a different field of view. A masking window is recommended to be slightly larger than the object (height and width) you want to cover.
  4. You can also click and drag across the screen to draw a privacy mask. Click the **Modify** button if you change the position of a privacy mask.

### NOTE:

- Up to 5 privacy mask windows can be configured on the same screen.
- If you want to delete the privacy mask window, please click the '**Delete**' button. To change an existing Privacy mask, use select an existing mask from the menu, and use the **Modify** button.

## Media > Video

### Stream settings

Stream

- Video settings for stream 1
- Video settings for stream 2
- Video settings for stream 3
- Video settings for stream 4

Click the stream item to display the detailed information. The maximum frame size will follow your settings in the above Viewing Window sections.

☐ Fixed quality:

☐ JPEG

This Network Camera offers real-time H.265, H.264 and MJPEG compression standards (Triple Codec) for real-time viewing. If the **H.265** or **H.264** mode is selected, the video is streamed via RTSP protocol. There are several parameters through which you can adjust the video performance:

☒ H.265

Frame size: 1920x1080

Maximum frame rate: 30 fps

Intra frame period: 1 S

Smart stream II

Bit rate control

☒ Constrained bit rate:

Target quality: Detailed

Maximum bit rate: 3 Mbps

Policy: Frame rate priority

☐ Fixed quality:

#### ■ Frame size

You can set up different video resolutions for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers, or recording the stream to an NVR. Note that a larger frame size takes up more bandwidth.

#### ■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality and for recognizing moving objects in the field of view.

If the power line frequency is set to 50Hz, the frame rates are selectable at 1fps, 2fps, ~ to 50fps. If the power line frequency is set to 60Hz, the frame rates are selectable at 1fps, 2fps, ~ to 60fps. You can also select **Customize** and manually enter a value.

The frame rate will decrease if you select a higher resolution.

#### ■ Intra frame period

Determine how often for firmware to plant an I frame. The shorter the duration, the more likely you will get better video quality, but at the cost of higher network bandwidth consumption. Select the intra frame period from the following durations: 1/4 second, 1/2 second, 1 second, 2 seconds, 3 seconds, and 4 seconds.

## ■ Smart stream II

### ■ Dynamic Intra frame period

High quality motion codecs, such as H.265, utilize the redundancies between video frames to deliver video streams at a balance of quality and bit rate.

The encoding parameters are summarized and illustrated below. The **I-frames** are completely self-referential and they are largest in size. The **P-frames** are predicted frames. The encoder refers to the previous I- or P-frames for redundant image information.

H.264/265 Frame Types

By dynamically prolonging the intervals for I-frames insertion to up to 10 seconds, the bit rates required for streaming a video can be tremendously reduced. When streaming a video of a static scene, the Dynamic Intra frame feature can save up to 53% of bandwidth. The amount of bandwidth thus saved is also determined by the activities in the field of view. If activities occur in the scene, firmware automatically shortens the I-frame insertion intervals in order to maintain image quality. In the low light or night conditions, the sizes of P-frames tend to be enlarged due to the noises, and hence the bandwidth saving effect is also reduced.

Streaming a typical 2MP scene normally requires 3~4Mb/s of bandwidth. With the Dynamic Intra frame function, the bandwidth for streaming a medium-traffic scene can be reduced to 2~3Mb/s, and during the no-traffic period of time, down to 500kb/s.

Static scene

Dynamic Intra Frame w/  
static scenes

Activities

Dynamic Intra Frame w/  
activities in scenes

With the H.265 codec in an optimal scenario and when Dynamic Intra frame is combined with the Smart Stream function, an 80% of bandwidth saving can be achieved compared with using H.264 without enabling these bandwidth-saving features.

- **Smart codec:** Smart codec effectively reduces the quality of the whole or the non-interested areas on a screen and therefore reduces the bandwidth consumed.

You can manually specify the video quality for the foreground and the background areas.

Select an operation mode if Smart codec is preferred.

- **Auto tracking:** The Auto mode configures the whole screen into the non-interested area. The video quality of part of the screen returns to normal when one or more objects move in that area. The remainder of the screen where there are no moving objects (no pixel changes) will still be transmitted in low-quality format.
- **Manual:** The Manual mode allows you to configure 3 ROI windows (Region of Interest, with Foreground quality) on the screen. Areas not included in any ROI windows will be considered as the non-interested areas. The details in the ROI areas will be transmitted in a higher-quality video format.

As illustrated below, the upper screen may contain little details of your interest, while the sidewalk on the lower screen is included in an ROI window.

As the result, the lower screen is constantly displayed in high details, while the upper half is transmitted using a lower-quality format. Although the upper half is transmitted using a lower quality format, you still have an awareness of what is happening on the whole screen.

- **Hybrid:** The major difference between the “Manual” mode and the “Hybrid” mode is that:

In the “**Hybrid**” mode, any objects entering the non-interested area will restore the video quality of the moving objects and the area around them. The video quality of the associated non-interested area is immediately restored to normal to cover the moving objects.

In the “**Manual**” mode, the non-interested area is always transmitted using a low-quality format regardless of the activities inside.

- **Quality priority:** Use the slide bar to tune the quality contrast between the ROI and non-interested areas.

The farther the slide bar button is to the right, the higher the image quality of the ROI areas. On the contrary, the farther the slide bar button to the left, the higher the image quality of the non-interested area.

In this way, you may set up an ROI window as a privacy mask by covering a protected area using an ROI window, while the remaining screen become the non-interested area. You may then configure the non-interested area to have a high image quality, or vice versa.

You should also select the Maximum bit rate from the pull-down menu as the threshold to contain the bandwidth consumption for both the high- and low-quality video sections in a smart stream.

## ■ Bit rate control

### Constrained bit rate:

A complex scene generally produces a larger file size, meaning that higher bandwidth will be needed for data transmission. The bandwidth utilization is configurable to match a selected level, resulting in mutable video quality performance. The bit rates are selectable at the following rates: 20Kbps, 30Kbps, 40Kbps, 50Kbps, 64Kbps, 128Kbps, 256Kbps, 512Kbps, 768Kbps, 1Mbps, 2Mbps, 3Mbps, 4Mbps, 6Mbps, 8Mbps, 10Mbps, 12Mbps, 14Mbps, ~ to 40Mbps. You can also select **Customize** and manually enter a value up to 40Mbps.

- - **Target quality:** Select a desired quality ranging from Medium to Excellent
- **Maximum bit rate:** Select a bit rate from the pull-down menu. The bit rate ranges from 20kbps to a maximum of 40Mbps. The bit rate then becomes the Average or Upper bound bit rate number. The Network Camera will strive to deliver video streams around or within the bit rate limitation you impose.
- **Policy:** If Frame Rate Priority is selected, the Network Camera will try to maintain the frame rate per second performance, while the image quality will be compromised. If Image quality priority is selected, the Network Camera may drop some video frames in order to maintain image quality.

### Fixed quality:

On the other hand, if **Fixed quality** is selected, all frames are transmitted with the same quality; bandwidth utilization is therefore unpredictable. The video quality can be adjusted to the following settings: Medium, Standard, Good, Detailed, and Excellent. You can also select **Customize** and manually enter a value.

**Maximum bit rate:** With the guaranteed image quality, you might still want to place a bit rate limitation to control the size of video streams for bandwidth and storage concerns. The configurable bit rate starts from 1Mbps to 40Mbps.

The Maximum bit rate setting in the Fixed quality configuration can ensure a reasonable and limited use of network bandwidth. For example, in low light conditions where a Fixed quality setting is applied, video packet sizes can tremendously increase when noises are produced with electrical gains.

You may also manually enter a bit rate number by selecting the **Customized** option.

If the **JPEG** mode is selected, the Network Camera sends consecutive JPEG images to the client, producing a moving effect similar to a filmstrip. Every single JPEG image transmitted guarantees the same image quality, which in turn comes at the expense of variable bandwidth usage. Because the media contents are a combination of JPEG images, no audio data is transmitted to the client. There are three parameters provided in MJPEG mode to control the video performance:

☒ JPEG

Frame size: 1920x1080 ▼

Maximum frame rate: 10 fps ▼

Bit rate control

☒ Constrained bit rate:

Target quality: Detailed ▼

Maximum bit rate: 6 Mbps ▼

Policy: Frame rate priority ▼

☐ Fixed quality:

#### ■ Frame size

You can set up different video resolution for different viewing devices. For example, set a smaller frame size and lower bit rate for remote viewing on mobile phones and a larger video size and a higher bit rate for live viewing on web browsers. Note that a larger frame size takes up more bandwidth.

#### ■ Maximum frame rate

This limits the maximum refresh frame rate per second. Set the frame rate higher for smoother video quality.

If the power line frequency is set to 50Hz, the frame rates are selectable from 1fps to 25fps. If the power line frequency is set to 60Hz, the frame rates are selectable from 1fps to 30fps. You can also select **Customize** and manually enter a value. The frame rate will decrease if you select a higher resolution.

#### ■ Video quality

Refer to the previous page setting an average or upper bound threshold for controlling the bandwidth consumed for transmitting motion jpegs. The configuration method is identical to that for H.264.

For Constant Bit Rate and other settings, refer to the previous page for details.

#### NOTE:

- *Converting high-quality video may significantly increase the CPU loading, and you may encounter streaming disconnection or video loss while capturing a complicated scene. In the event of occurrence, we suggest you customize a lower video resolution or reduce the frame rate to obtain smooth video.*

## Media > Audio

### Audio Settings

**Audio settings**

☒ Mute

External microphone input gain: 0 ————— 100% 65%

Audio type

☒ G.711: pcmu ▼

☐ G.726: 32 Kbps ▼

Save

**Mute:** Select this option to disable audio transmission from the Network Camera to all clients. Note that if muted, no audio data will be transmitted even if audio transmission is enabled on the Client Settings page. In that case, the following message is displayed:

**External microphone input:** Select the gain of the external audio input according to ambient conditions. Adjust the gain from 0% to 100%.

**Audio type:** Select audio codec and the sampling bit rate .

- G.711 also provides good sound quality and requires about 64Kbps. Select pcmu ( $\mu$ -Law) or pcma (A-Law) mode.
- G.726 is a speech codec standard covering voice transmission at rates of 16, 24, 32, and 40kbit/s.

When completed with the settings on this page, click **Save** to enable the settings.

## Media profiles

You can configure a different video stream for each of the 3 default profiles, Max. view, Recording, Live view, and App.

The related video stream information will display, including stream number, resolution, codec used, frame rate, etc. The Multicast port number, and address for video, audio, and Metadata configuration will also be listed.

**> Stream profiles setup**

Profile name:

**Source**

Codec: G.711

**Multicast**

Port: 15562 Address: 239.240.7.99

## Network > General settings

This section explains how to configure a wired network connection for the Network Camera.

### Network Type

### LAN

Select this option when the Network Camera is deployed on a local area network (LAN) and is intended to be accessed by local computers. The default setting for the Network Type is LAN. Please remember to click on the **Save** button when you complete the Network setting.

Get IP address automatically: Select this option to obtain an available dynamic IP address assigned by the DHCP server each time the camera is connected to the LAN.

Use fixed IP address: Select this option to manually assign a static IP address to the Network Camera.

1. You can make use of VIVOTEK Installation Wizard 2 on the software CD to easily set up the Network Camera on LAN. Please refer to Software Installation on page 23 for details.
2. Enter the Static IP, Subnet mask, Default router, and Primary DNS provided by your ISP or network administrator.

Subnet mask: This is used to determine if the destination is in the same subnet. The default value is "255.255.255.0".

Default router: This is the gateway used to forward frames to destinations in a different subnet. Invalid router setting will disable the transmission to destinations across different subnets.

**Primary DNS:** The primary domain name server that translates hostnames into IP addresses.

**Secondary DNS:** Secondary domain name server that backups the Primary DNS.

**Primary WINS server:** The primary WINS server that maintains the database of computer names and IP addresses.

**Secondary WINS server:** The secondary WINS server that maintains the database of computer names and IP addresses.

**Enable UPnP presentation:** Select this option to enable UPnP™ presentation for your Network Camera so that whenever a Network Camera is presented to the LAN, the shortcuts to connected Network Cameras will be listed in My Network Places. You can click the shortcut to link to the web browser. Currently, UPnP™ is supported by Windows XP or later. Note that to utilize this feature, please make sure the UPnP™ component is installed on your computer.

**Enable UPnP port forwarding:** To access the Network Camera from the Internet, select this option to allow the Network Camera to open ports automatically on the router so that video streams can be sent out from a LAN. To utilize of this feature, make sure that your router supports UPnP™ and it is activated.

### PPPoE (Point-to-point over Ethernet)

Select this option to configure your Network Camera to make it accessible from anywhere as long as there is an Internet connection. Note that to utilize this feature, it requires an account provided by your ISP.

Follow the steps below to acquire your Network Camera's public IP address.

1. Set up the Network Camera on the LAN.
2. Go to Configuration > Event > Event settings > Add server (please refer to Add server on page 124) to add a new email or FTP server.
3. Go to Configuration > Event > Event settings > Add media (please refer to Add media on page 129).

Select System log so that you will receive the system log in TXT file format which contains the Network Camera's public IP address in your email or on the FTP server.

4. Go to Configuration > Network > General settings > Network type. Select PPPoE and enter the user name and password provided by your ISP. Click **Save** to enable the setting.

**Network type**

☐ LAN  
☒ PPPoE

User name:   
 Password:   
 Confirm password:

☐ Enable IPv6

5. The Network Camera will reboot.

6. Disconnect the power to the Network Camera; remove it from the LAN environment.

**NOTE:**

- ▶ If the default ports are already used by other devices connected to the same router, the Network Camera will select other ports for the Network Camera.
- ▶ If UPnP™ is not supported by your router, you will see the following message:  
**Error: Router does not support UPnP port forwarding.**
- ▶ Steps to enable the UPnP™ user interface on your computer:  
Note that you must log on to the computer as a system administrator to install the UPnP™ components.

1. Go to Start, click **Control Panel**, then click **Add or Remove Programs**.

2. In the Add or Remove Programs dialog box, click **Add/Remove Windows Components**.

3. In the Windows Components Wizard dialog box, select **Networking Services** and click **Details**.

4. In the Networking Services dialog box, select **Universal Plug and Play** and click **OK**.

5. Click **Next** in the following window.

6. Click **Finish**. UPnP™ is enabled.

► **How does UPnP™ work?**

UPnP™ networking technology provides automatic IP configuration and dynamic discovery of devices added to a network. Services and capabilities offered by networked devices, such as printing and file sharing, are available among each other without the need for cumbersome network configuration. In the case of Network Cameras, you will see Network Camera shortcuts under My Network Places.

- Enabling UPnP port forwarding allows the Network Camera to open a secondary HTTP port on the router—not HTTP port—meaning that you have to add the secondary HTTP port number to the Network Camera's public address in order to access the Network Camera from the Internet. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

| From the Internet          | In LAN                                               |
|----------------------------|------------------------------------------------------|
| http://203.67.124.123:8080 | http://192.168.4.160 or<br>http://192.168.4.160:8080 |

- If the PPPoE settings are incorrectly configured or the Internet access is not working, restore the Network Camera to factory default; please refer to Restore on page 58 for details. After the Network Camera is reset to factory default, it will be accessible on the LAN.

## Enable IPv6

Select this option and click **Save** to enable IPv6 settings.

Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft® Internet Explorer 6.5, Mozilla Firefox 3.0 or above.

The 'Network type' window contains the following elements:

- Network type:** Two radio buttons, 'LAN' and 'PPPoE'. 'PPPoE' is selected.
- User name:** A text input field.
- Password:** A text input field.
- Confirm password:** A text input field.
- Enable IPv6:** A checked checkbox.
- IPv6 information:** A blue underlined link.
- Manually setup the IP address:** An unchecked checkbox.
- Save:** A button at the bottom right.

When IPv6 is enabled, by default, the network camera will listen to router advertisements and be assigned with a link-local IPv6 address accordingly.

IPv6 Information: Click this button to obtain the IPv6 information as shown below.

The 'IPv6 Information' pop-up window displays the following fields:

- [eth0 address]:** fe80::0000:0000:0000:0202:d1ff:fe0e:d4c8/64@Link
- [Gateway]:** IPv6 address list of gateway
- [DNS]:** IPv6 address list of DNS

If your IPv6 settings are successful, the IPv6 address list will be listed in the pop-up window. The IPv6 address will be displayed as follows:

## Refers to Ethernet

The IPv6 address list is shown with annotations:

- [eth0 address]:** 2001:0c08:2500:0002:0202:d1ff:fe04:65f4/64@Global — Link-global IPv6 address/network mask
- [eth0 address]:** fe80::0000:0000:0000:0202:d1ff:fe04:65f4/64@Link — Link-local IPv6 address/network mask
- [Gateway]:** fe80::211:d8ff:fea2:1a2b
- [DNS]:** 2010:05c0:978d::

Please follow the steps below to link to an IPv6 address:

1. Open your web browser.
2. Enter the link-global or link-local IPv6 address in the address bar of your web browser.
3. The format should be:

`http://[2001:0c08:2500:0002:0202:d1ff:fe04:65f4]/`

↑  
IPv6 address

4. Press **Enter** on the keyboard or click **Refresh** button to refresh the webpage.  
For example:

#### NOTE:

- If you have a Secondary HTTP port (the default value is 8080), you can also link to the webpage using the following address format: (Please refer to **HTTP** streaming on page 86 for detailed information.)

`http://[2001:0c08:2500:0002:0202:d1ff:fe04:65f4]/:8080`

↑  
IPv6 address

↑  
Secondary HTTP port

- If you choose PPPoE as the Network Type, the [PPP0 address] will be displayed in the IPv6 information column as shown below.

[eth0 address]

fe80:0000:0000:0000:0202:d1ff:fe11:2299/64@Link

[ppp0 address]

fe80:0000:0000:0000:0202:d1ff:fe11:2299/10@Link

2001:b100:01c0:0002:0202:d1ff:fe11:2299/64@Global

[Gateway]

fe80::90:1a00:4142:8ced

[DNS]

2001:b000::1

**Manually setup the IP address:** Select this option to manually set up IPv6 settings if your network environment does not have DHCPv6 server and router advertisements-enabled routers. If you check this item, the following blanks will be displayed for you to enter the corresponding information:

☒ Enable IPv6

IPv6 information

☒ Manually setup the IP address

Optional IP address / Prefix length  /

Optional default router

Optional primary DNS

## Network > Streaming protocols

### NOTE:

The metadata information can only be transmitted through the HTTP main port. Metadata is not available through the secondary HTTP port.

### HTTP streaming

To utilize HTTP authentication, make sure that you have set a password for the Network Camera first; please refer to Security > User account on page 99 for details.

**Authentication:** Depending on your network security requirements, the Network Camera provides two types of security settings for an HTTP transaction: basic and digest.

If **basic** authentication is selected, the password is sent in plain text format and there can be potential risks of being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm and thus provide better protection against unauthorized accesses.

**HTTP port / Secondary HTTP port:** By default, the HTTP port is set to 80 and the secondary HTTP port is set to 8080. They can also be assigned to another port number between 1025 and 65535. If the ports are incorrectly assigned, the following warning messages will be displayed:

To access the Network Camera on the LAN, both the HTTP port and secondary HTTP port can be used to access the Network Camera. For example, when the HTTP port is set to 80 and the secondary HTTP port is set to 8080, refer to the list below for the Network Camera's IP address.

#### On the LAN

http://192.168.4.160 or  
http://192.168.4.160:8080

**Access name for stream 1 ~ 4:** This Network camera supports multiple streams simultaneously. The access name is used to identify different video streams. Users can click **Media > Video > Stream settings** to set up the video quality of linked streams. For more information about how to set up the video quality, please refer to Stream settings on page 70.

When using **Mozilla Firefox** to access the Network Camera and the video mode is set to JPEG, users will receive video comprised of continuous JPEG images. This technology, known as "server push", allows the Network Camera to feed live pictures to Mozilla Firefox.

URL command -- <http://<ip address>:<http port>/<access name for stream 1, 2, 3>>

For example, when the Access name for stream 2 is set to [video1s2.mjpg](#):

1. Launch Mozilla Firefox or Netscape.
2. Type the above URL command in the address bar. Press **Enter**.
3. The JPEG images will be displayed in your web browser.

#### NOTE:

- *Microsoft® Internet Explorer does not support server push technology; therefore, you will not be able to access a video stream using <http://<ip address>:<http port>/<access name for stream 1, 2, 3>> .*

## RTSP Streaming

To utilize RTSP streaming authentication, make sure that you have set a password for controlling the access to video stream first. Please refer to Security > User account on page 99 for details.

| HTTP                                                               | RTSP |
|--------------------------------------------------------------------|------|
| Authentication: <input type="text" value="digest"/>                |      |
| RTSP port: <input type="text" value="554"/>                        |      |
| RTP port for video: <input type="text" value="5556"/>              |      |
| RTCP port for video: <input type="text" value="5557"/>             |      |
| RTP port for metadata: <input type="text" value="6556"/>           |      |
| RTCP port for metadata: <input type="text" value="6557"/>          |      |
| RTP port for audio: <input type="text" value="5558"/>              |      |
| RTCP port for audio: <input type="text" value="5559"/>             |      |
| <b>Video</b>                                                       |      |
| Multicast settings for <input type="text" value="Stream 1"/>       |      |
| IP version: <input type="text" value="IPv6"/>                      |      |
| Multicast video address: <input type="text" value="239.240.7.99"/> |      |
| Multicast video port: <input type="text" value="15560"/>           |      |
| Multicast video TTL [1~255]: <input type="text" value="15"/>       |      |
| <b>Audio</b>                                                       |      |
| Multicast settings: <input type="text"/>                           |      |

**Authentication:** Depending on your network security requirements, the Network Camera provides three types of security settings for streaming via RTSP protocol: disable, basic, and digest.

If **basic** authentication is selected, the password is sent in plain text format, but there can be potential risks of it being intercepted. If **digest** authentication is selected, user credentials are encrypted using MD5 algorithm, thus providing better protection against unauthorized access.

The availability of the RTSP streaming for the three authentication modes is listed in the following table:

|         | VLC |
|---------|-----|
| Disable | O   |
| Basic   | O   |
| Digest  | X   |

**Access name for Channel # and stream #:** This Network camera supports multiple streams simultaneously. The access name is used to differentiate the streaming source.

If you want to use an **RTSP player** to access the Network Camera, you **HAVE TO** set the video mode to **H.265** or **264** and use the following RTSP URL command to request transmission of the streaming data.

**rtsp://<ip address>:<rtsp port>/<access name for stream1 ~ 4>**

For example, when the access name for **stream 1** is set to **live1s1.sdp**:

1. Launch an RTSP player.
2. Choose File > Open URL. A URL dialog box will pop up.
3. Type the above URL command in the address field.
4. The live video will be displayed in your player as shown below.

### RTSP port /RTP port for video, audio/ RTCP port for video, audio

- RTSP (Real-Time Streaming Protocol) controls the delivery of streaming media. By default, the port number is set to 554.
- The RTP (Real-time Transport Protocol) is used to deliver video and audio data to the clients. By default, the RTP port for video is set to 5556 and the RTP port for audio is set to 5558.
- The RTCP (Real-time Transport Control Protocol) allows the Network Camera to transmit the data by monitoring the Internet traffic volume. By default, the RTCP port for video is set to 5557 and the RTCP port for audio is set to 5559.

The ports can be changed to values between 1025 and 65535. The RTP port must be an even number and the RTCP port is the RTP port number plus one, and thus is always an odd number. When the RTP port changes, the RTCP port will change accordingly.

If the RTP ports are incorrectly assigned, the following warning message will be displayed:

**Multicast settings for stream #1 ~ #3:** Click the items to display the detailed configuration information. Select the Always multicast option to enable multicast for streams #1 ~ #3.

**Video**

Multicast settings for Stream 1 ▾

IP version: IPv6 ▾

Multicast video address: 239.240.7.99

Multicast video port: 15560

Multicast video TTL [1~255]: 15

**Audio**

Multicast settings:

IP version: IPv4 ▾

Multicast audio address: 239.240.7.99

Multicast audio port: 15562

Multicast audio TTL [1~255]: 15

**Metadata**

Multicast settings:

IP version: IPv4 ▾

Multicast metadata address: 239.240.7.99

Multicast metadata port: 16560

Multicast metadata TTL [1~255]: 15

Unicast video transmission delivers a stream through point-to-point transmission; multicast, on the other hand, sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Therefore, enabling multicast can effectively save Internet bandwidth.

The ports can be changed to values between 1025 and 65535. The multicast RTP port must be an even number and the multicast RTCP port number is the multicast RTP port number plus one, and thus is always odd. When the multicast RTP port changes, the multicast RTCP port will change accordingly.

If the multicast RTP video ports are incorrectly assigned, the following warning message will be displayed:

**Multicast TTL [1~255]:** The multicast TTL (Time To Live) is the value that tells the router the range a packet can be forwarded. Each hop decreases TTL by one.

| Initial TTL | Scope                             |
|-------------|-----------------------------------|
| 0           | Restricted to the same host       |
| 1           | Restricted to the same subnetwork |
| 15          | Restricted to the same site       |
| 64          | Restricted to the same region     |
| 128         | Restricted to the same continent  |
| 255         | Unrestricted in scope             |

#### **IMPORTANT:**

The Multicast metadata port is utilized by VIVOTEK VADP modules to transfer video analytics results, PTZ stream, textual data, and event messages between the camera and the client side running and observing the video analysis. If your client side computer is located outside the local network, you may need to open the associated TCP port on routers and firewall.

## Network > DDNS

This section explains how to configure the dynamic domain name service for the Network Camera. DDNS is a service that allows your Network Camera, especially when assigned with a dynamic IP address, to have a fixed host and domain name.

### Express link

Express Link is a free service provided by VIVOTEK server, which allows users to register a domain name for a network device. One URL can only be mapped to one MAC address. This service will examine if the host name is valid and automatically open a port on your router. If using DDNS, the user has to manually configure UPnP port forwarding. Express Link is more convenient and easier to set up.

Please follow the steps below to enable Express Link:

1. Make sure that your router supports UPnP port forwarding and it is activated.
2. Check **Enable express link**.
3. Enter a host name for the network device and click **Save**. If the host name has been used by another device, a warning message will show up. If the host name is valid, it will display a message as shown below.

## Manual setup

### DDNS: Dynamic domain name service

**DDNS: Dynamic domain name service**

☐ Enable DDNS:

Provider: Dyn dns.org(Dynamic) ▼

Host name:

User name:

Password:

**Enable DDNS:** Select this option to enable the DDNS setting.

**Provider:** Select a DDNS provider from the provider drop-down list.

VIVOTEK offers **Safe100.net**, a free dynamic domain name service, to VIVOTEK customers. It is recommended that you register **Safe100.net** to access VIVOTEK's Network Cameras from the Internet. Additionally, we offer other DDNS providers, such as Dyn dns.org(Dynamic), Dyn dns.org(Custom), TZO.com, DHS.org, CustomSafe100, dyn-interfree.it.

Note that before utilizing this function, please apply for a dynamic domain account first.

#### ■ Safe100.net

1. In the DDNS column, select **Safe100.net** from the drop-down list. Click **I accept** after reviewing the terms of the Service Agreement.
2. In the Register column, fill in the Host name (xxxx.safe100.net), Email, Key, and Confirm Key, and click **Register**. After a host name has been successfully created, a success message will be displayed in the DDNS Registration Result column.

**Register**

Host name:

Email:

Key:  Forget key

Confirm key:

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

Register

**DDNS Registration Result:**

[Register] Successfully Your account information has been mailed to registered e-mail address

Upon successful registration, you can click copy to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

3. Click **Copy** and all the registered information will automatically be uploaded to the corresponding fields in the DDNS column at the top of the page as seen in the picture.

**DDNS: Dynamic domain name service**

☒ Enable DDNS:

Provider: Safe100.net

Host name: VTK.safe100.net [\*safe100.net]

Email: wtk@vivotek.com

Key: ....

Save

---

**Register**

Host name: VTK.safe100.net

Email: wtk@vivotek.com

Key: .... Forget key

Confirm key: ....

To apply for a domain name for the camera, or to modify the previously registered information, fill in the following fields and then click "Register".

Register

DDNS Registration Result:

[Register] Successfully Your account information has been mailed to registered e-mail address

Upon successful registration, you can click [copy](#) to automatically upload relevant information to the DDNS form or you can manually fill it in. Then, click "Save" to save new settings.

4. Select Enable DDNS and click **Save** to enable the setting.

#### ■ CustomSafe100

VIVOTEK offers documents to establish a CustomSafe100 DDNS server for distributors and system integrators. You can use CustomSafe100 to register a dynamic domain name if your distributor or system integrators offer such services.

1. In the DDNS column, select CustomSafe100 from the drop-down list.
2. In the Register column, fill in the Host name, Email, Key, and Confirm Key; then click **Register**. After a host name has been successfully created, you will see a success message in the DDNS Registration Result column.
3. Click **Copy** and all for the registered information will be uploaded to the corresponding fields in the DDNS column.
4. Select Enable DDNS and click **Save** to enable the setting.

**Forget key:** Click this button if you have forgotten the key to Safe100.net or CustomSafe100. Your account information will be sent to your email address.

Refer to the following links to apply for a dynamic domain account when selecting other DDNS providers:

- [Dyndns.org\(Dynamic\)](http://www.dyndns.org) / [Dyndns.org\(Custom\)](http://www.dyndns.org): visit <http://www.dyndns.com/>

## Network > QoS (Quality of Service)

Quality of Service refers to a resource reservation control mechanism, which guarantees a certain quality to different services on the network. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications. Quality can be defined as, for instance, a maintained level of bit rate, low latency, no packet dropping, etc.

The following are the main benefits of a QoS-aware network:

- The ability to prioritize traffic and guarantee a certain level of performance to the data flow.
- The ability to control the amount of bandwidth each application may use, and thus provide higher reliability and stability on the network.

### Requirements for QoS

To utilize QoS in a network environment, the following requirements must be met:

- All network switches and routers in the network must include support for QoS.
- The network video devices used in the network must be QoS-enabled.

### QoS models

#### CoS (the VLAN 802.1p model)

IEEE802.1p defines a QoS model at OSI Layer 2 (Data Link Layer), which is called CoS, Class of Service. It adds a 3-bit value to the VLAN MAC header, which indicates the frame priority level from 0 (lowest) to 7 (highest). The priority is set up on the network switches, which then use different queuing disciplines to forward the packets.

Below is the setting column for CoS. Enter the **VLAN ID** of your switch (0~4095) and choose the priority for each application (0~7).

**CoS**

☒ Enable CoS

|              |                                                       |
|--------------|-------------------------------------------------------|
| VLAN ID:     | <input style="width: 50px;" type="text" value="1"/>   |
| Live video:  | <input style="width: 50px;" type="text" value="0"/> ▼ |
| Live audio:  | <input style="width: 50px;" type="text" value="0"/> ▼ |
| Event/Alarm: | <input style="width: 50px;" type="text" value="0"/> ▼ |
| Management:  | <input style="width: 50px;" type="text" value="0"/> ▼ |

If you assign Video the highest level, the switch will handle video packets first.

#### NOTE:

- ▶ A VLAN Switch (802.1p) is required. Web browsing may fail if the CoS setting is incorrect.
- ▶ The Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time; they offer a "best-effort." Users can think of CoS as "coarsely-grained" traffic control and QoS as "finely-grained" traffic control.
- ▶ Although CoS is simple to manage, it lacks scalability and does not offer end-to-end guarantees since it is based on L2 protocol.

## QoS/DSCP (the DiffServ model)

DSCP-ECN defines QoS at Layer 3 (Network Layer). The Differentiated Services (DiffServ) model is based on packet marking and router queuing disciplines. The marking is done by adding a field to the IP header, called the DSCP (Differentiated Services Codepoint). This is a 6-bit field that provides 64 different class IDs. It gives an indication of how a given packet is to be forwarded, known as the Per Hop Behavior (PHB). The PHB describes a particular service level in terms of bandwidth, queueing theory, and dropping (discarding the packet) decisions. Routers at each network node classify packets according to their DSCP value and give them a particular forwarding treatment; for example, how much bandwidth to reserve for it.

Below are the setting options of DSCP (DiffServ Codepoint). Specify the DSCP value for each application (0~63).

## Network > SNMP (Simple Network Management Protocol)

This section explains how to use the SNMP on the network camera. The Simple Network Management Protocol is an application layer protocol that facilitates the exchange of management information between network devices. It helps network administrators to remotely manage network devices and find, solve network problems with ease.

- The SNMP consists of the following three key components:
  1. Manager: Network-management station (NMS), a server which executes applications that monitor and control managed devices.
  2. Agent: A network-management software module on a managed device which transfers the status of managed devices to the NMS.
  3. Managed device: A network node on a managed network. For example: routers, switches, bridges, hubs, computer hosts, printers, IP telephones, network cameras, web server, and database.

Before configuring SNMP settings on the this page, please enable your NMS first.

### SNMP Configuration

#### Enable SNMPv1, SNMPv2c

Select this option and enter the names of Read/Write community and Read Only community according to your NMS settings.

☒ Enable SNMPv1, SNMPv2c

**SNMPv1, SNMPv2c Settings**

Read/Write community:

Read only community:

#### Enable SNMPv3

This option contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.

- Security name: According to your NMS settings, choose Read/Write or Read Only and enter the community name.
- Authentication type: Select MD5 or SHA as the authentication method.
- Authentication password: Enter the password for authentication (at least 8 characters).
- Encryption password: Enter a password for encryption (at least 8 characters).

☒ Enable SNMPv3

**SNMPv3 Settings**

Read/Write Security name:

Authentication Type:

Authentication Password:

Encryption Password:

Read only Security name:

Authentication Type:

Authentication Password:

Encryption Password:

## Network > FTP

The newer firmware disabled the FTP port for security concerns. You can manually enable the FTP server service to enable the FTP function. You can disable the FTP server function when it is not in use.

**FTP port:** The FTP server allows the user to save recorded video clips. You can utilize VIVOTEK's Shepherd utility to upgrade the firmware via FTP server. By default, the FTP port is set to 21. It can also be assigned to another port number between 1025 and 65535.

### **Tips:**

You can FTP the camera's IP address to download videos recorded in the SD card, or use the "<http://ip/cgi-bin/admin/lscrtl.cgi?cmd=search>" command to examine the recorded files on your SD card.

---

## Bonjour

To access the camera from a Mac computer, go to Safari, click on Bonjour and select the camera from a drop-down list.

You can go to Safari > Preferences to enter your user name and password, and provide the root password the first time you access the camera. The camera main page will open in your browser.

Some later iOSes may come without the Bonjour option. Install the Discovery utility instead.

Find the Discovery (formerly Bonjour Browser) from the Mac App Store.

Discovery is a utility that displays all the Bonjour services on your local network or on Wide-Area Bonjour domains. The utility is previously called Bonjour Browser, it is now distributed on the Mac App Store.

Discovery requires macOS 10.12 or higher. For older versions of Mac OS you can download the old version of Bonjour Browser.

Bonjour Browser (obsolete)

<http://www.tildesoft.com/files/BonjourBrowser.dmg> - Version 1.5.6

Discovery for iOS

<https://itunes.apple.com/us/app/discovery-dns-sd-browser/id305441017?mt=8>

## Security > User accounts

This section explains how to enable password protection and create multiple accounts.

### Account management

The administrator account name is “root”, which is permanent and can not be deleted. If you want to add more accounts in the Account management window, please apply the password for the “root” account first.

The administrator can create up to 20 user accounts.

To create a new user,

1. Click to unfold the pull-down menu. Select **New user**.
2. Enter the new user’s name and password. Type the password identically in both text boxes.

Some, but not all special ASCII characters are supported: !, \$, %, -, ., @, ^, \_, and ~. You can use them in the password combination.

The strength of your password combination is shown on the right, use the combination of alphabetic, numeric, upper case, and lower case characters until the password strength is good enough.

3. Select the privilege level for the new user account. Click **Add** to enable the setting. The privilege levels are listed below:

|               |                                                                                                                        |
|---------------|------------------------------------------------------------------------------------------------------------------------|
| Administrator | Full control                                                                                                           |
| Operator      | Control DO, white-light illuminator, snapshot, and PTZ; the operator is unable to enter the camera Configuration page. |
| Viewer        | Control DO, white-light illuminator, view, listen, PTZ, and talk through the camera interface.                         |

Access rights are sorted by user privilege (Administrator, Operator, and Viewer). Only administrators can access the Configuration page. Although operators cannot access the Configuration page, they can use the URL Commands to get and set the value of parameters. For more information, please refer to URL Commands of the Network Camera on page 154. Viewers can only access the main page for live viewing.

Here you can also change a user’s access rights or delete user accounts.

1. Select an existing account to modify.
2. Make necessary changes and click **Update** or **Delete** to enable the setting.

## Privilege management

Account management

Privilege management

Operator:

☒ PTZ control

Viewer:

☒ PTZ control

Save

Digital Output & PTZ control: You can modify the management privilege as operators or viewers. Select or de-select the checkboxes, and then click **Save** to enable the settings. If you give Viewers the privilege, Operators will also have the ability to control the Network Camera through the main page.

## Security > HTTPS (Hypertext Transfer Protocol over SSL)

This section explains how to enable authentication and encrypted communication over SSL (Secure Socket Layer). It helps protect streaming data transmission over the Internet on higher security level.

### Create and Install Certificate Method

Before using HTTPS for communication with the Network Camera, a **Certificate** must be created first. There are three ways to create and install a certificate:

#### Create self-signed certificate

1. Select this option from a pull-down menu.
2. In the first column, select **Enable HTTPS secure connection**, then select a connection option: "HTTP & HTTPS" or "HTTPS only".
3. Click **Create certificate** to generate a certificate.

The screenshot shows the 'HTTPS' configuration page. The 'Enable HTTPS secure connection' checkbox is checked. Under 'Mode', 'HTTP & HTTPS' is selected. Under 'Certificate', the 'Create self-signed certificate' method is chosen. A modal box with a progress bar says 'Please wait while the certificate is being generated...'. The 'Certificate information' section shows fields for Country (TW), State or province (Asia), Locality (Asia), Organization (VIVOTEK, Inc), Organization unit (VIVOTEK, Inc), Common name (www.vivotek.com), and Validity (3650 days). The 'Create certificate' button is highlighted with a yellow box.

4. The Certificate Information will automatically be displayed as shown below. You can click **Certificate properties** to view detailed information about the certificate.

The screenshot shows the 'Certificate information' section. The 'Status' is 'Active'. The 'method' is 'Create self-signed certificate'. The 'Country' is 'TW', 'State or province' is 'Asia', 'Locality' is 'Asia', 'Organization' is 'VIVOTEK, Inc', 'Organization unit' is 'VIVOTEK, Inc', 'Common name' is 'www.vivotek.com'. The 'Certificate properties' link is highlighted with a blue box. The 'Remove certificate' button is also visible.

5. Click **Save** to preserve your configuration, and your current session with the camera will change to the encrypted connection.
6. If your web session does not automatically change to an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from "<http://>" to "<https://>" in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

**https://**

## Create certificate request and install

1. Select the option from the **Method** pull-down menu.
2. Click **Create certificate** to proceed.
3. The following information will show up in a pop-up window after clicking **Create**. Then click **Save** to generate the certificate request.

✦ Certificate:

Certificate information

Status: Not installed  
Method: Create certificate request and install  
Country: TW  
State or province: Asia  
Locality: Asia  
Organization: VIVOTEK Inc.  
Organization unit: VIVOTEK Inc.  
Common name: www.vivotek.com

Create certificate

Please wait while the certificate is being generated...

4. The Certificate request window will prompt.

If you see the following Information bar, click **OK** and click on the Information bar at the top of the page to allow pop-ups.

5. Look for a trusted certificate authority, such as Symantec's VeriSign Authentication Services, that issues digital certificates. Sign in and purchase the SSL certification service. Copy the certificate request from your request prompt and paste it in the CA's signing request window. Proceed with the rest of the process as CA's instructions on their webpage.

[illegible]

6. Once completed, your SSL certificate should be delivered to you via an email or other means. Copy the contents of the certificate in the email and paste it in a text/HTML/hex editor/converter, such as IDM Computer Solutions' UltraEdit.

immediately, please dial 866.893.6565 or 650.426.5112 option 3 or send an email to [internet-sales@verisign.com](mailto:internet-sales@verisign.com)

Thank you for your interest in Symantec!

```

12. To begin an encrypted HTTPS session, click **Home** to return to the main page. Change the URL address from **"http://"** to **"https://"** in the address bar and press **Enter** on your keyboard. Some Security Alert dialogs will pop up. Click **OK** or **Yes** to enable HTTPS.

## Security > Access List

This section explains how to control access permission by verifying the client PC's IP address.

### General Settings

General settings

Maximum number of concurrent streaming: 10

Connection management

Maximum number of concurrent streaming connection(s) limited to: Simultaneous live viewing for 1~10 clients (including stream 1 to stream 3). The default value is 10. If you modify the value and click **Save**, all current connections will be disconnected and automatically attempt to re-link (IE Explorer or Quick Time Player).

View Information: Click this button to display the connection status window showing a list of the current connections. For example:

|                          | IP address    | Elapsed time | User ID |
|--------------------------|---------------|--------------|---------|
| <input type="checkbox"/> | 172.16.2.53   | 00:00:05     |         |
| <input type="checkbox"/> | 192.168.4.104 | 01:49:35     |         |

Refresh Add to deny list Disconnect Close

Note that only consoles that are currently displaying live streaming will be listed in the View Information list.

- IP address: Current connections to the Network Camera.
- Elapsed time: How much time the client has been at the webpage.
- User ID: If the administrator has set a password for the webpage, the clients have to enter a user name and password to access the live video. The user name will be displayed in the User ID column. If the administrator allows clients to link to the webpage without a user name and password, the User ID column will be empty.

There are some situations that allow clients access to the live video without a user name and password:

1. The administrator does not set up a root password. For more information about how to set up a root password and manage user accounts, please refer to Security > User account on page 99.
2. The administrator has set up a root password, but set **RTSP Authentication** to "disable". For more information about **RTSP Authentication**, please refer to RTSP Streaming on page 87.
3. The administrator has set up a root password, but allows anonymous viewing. For more information about **Allow Anonymous Viewing**, please refer to page 99.

- **Disconnect:** If you want to break off the current connections, please select them and click this button. Please note that those checked connections will only be disconnected temporarily and they will automatically retry a connection (IE Explorer or VLC Player).

Enable access list filtering: Check this item and click **Save** if you want to enable the access list filtering function.

## Filter

Filter type: Select **Allow** or **Deny** as the filter type. If you choose **Allow Type**, only those clients whose IP addresses are on the Access List below can access the Network Camera, and exclude the access from those that are not on the list. If you choose **Deny Type**, those clients whose IP addresses are on the Access List below will not be allowed to access the Network Camera, while those that are not on the list can.

**Filter**

Filter type: ☐ Allow ☒ Deny

Then you can **Add** a rule to the following Access List. Please note that the IPv6 access list column will not be displayed unless you enable IPv6 on the Network page. For more information about **IPv6 Settings**, please refer to Network > Enable IPv6 on page 83 for detailed information.

**Filter**

Filter type: ☐ Allow ☒ Deny

IPv4 access list

IPv6 access list

There are three types of rules:

Single: This rule allows the user to add an IP address to the Allowed/Denied list.

For example:

**Filter address**

Rule:  ▼

IP address:

**Network:** This rule allows the user to assign a network address and corresponding subnet mask to the Allow/Deny List. The routing prefix is written in CIDR (Classless Inter-Domain Routing) notation. For example:

**Filter address**

Rule: Network

Network address / Network mask: 192.168.2.0 / 24

OK Cancel

accesses from IP address 192.168.2.x will be blocked.

For example:

- 192.168.100.14/24 represents the IPv4 address 192.168.100.14 and its associated routing prefix 192.168.100.0, or equivalently, its subnet mask 255.255.255.0 has 24 leading 1-bits.
- The IPv4 block 192.168.100.0/22 represents the 1024 IPv4 addresses from 192.168.100.0 to 192.168.103.255.

If IPv6 filter is preferred, you will be prompted by the following window. Enter the IPv6 address and the two-digit prefix length to specify the range of IP addresses in your configuration.

**Add ipv6 filter list**

**Filter address**

Rule: Network

Network address / Network mask:  /

OK Cancel

**Range:** This rule allows the user to assign a range of IP addresses to the Allow/Deny List.

Note: This rule is only applied to IPv4.

For example:

**Filter address**

Rule: Range

IP address - IP address: 192.168.2.0 - 192.168.2.255

OK Cancel

## Administrator IP address

**Always allow the IP address to access this device:** You can check this item and add the Administrator's IP address in this field to make sure the Administrator can always connect to the device.

**Administrator IP address**

☐ Always allow the IP address to access this device

Save

## Security > IEEE 802.1X

Enable this function if your network environment uses IEEE 802.1x, which is a port-based network access control. The network devices, intermediary switch/access point/hub, and RADIUS server must support and enable 802.1x settings.

The 802.1x standard is designed to enhance the security of local area networks, which provides authentication to network devices (clients) attached to a network port (wired or wireless). If all certificates between client and server are verified, a point-to-point connection will be enabled; if authentication fails, access on that port will be prohibited. 802.1x utilizes an existing protocol, the Extensible Authentication Protocol (EAP), to facilitate communication.

■ The components of a protected network with 802.1x authentication:

1. Supplicant: A client end user (camera), which requests authentication.
2. Authenticator (an access point or a switch): A “go between” which restricts unauthorized end users from communicating with the authentication server.
3. Authentication server (usually a RADIUS server): Checks the client certificate and decides whether to accept the end user’s access request.

■ VIVOTEK Network Cameras support two types of EAP methods to perform authentication: **EAP-PEAP** and **EAP-TLS**.

Please follow the steps below to enable 802.1x settings:

1. Before connecting the Network Camera to the protected network with 802.1x, please apply a digital certificate from a Certificate Authority (i.e., your network administrator) which can be validated by a RADIUS server.
2. Connect the Network Camera to a PC or notebook outside of the protected LAN. Open the configuration page of the Network Camera as shown below. Select **EAP-PEAP** or **EAP-TLS** as the EAP method. In the following blanks, enter your ID and password issued by the CA, then upload related certificate(s).

### IEEE 802.1x

☒ Enable IEEE 802.1x

EAP method: EAP-PEAP ▼

Identity:

Password:

CA certificate:  Browse... Upload

Status: no file Remove

**! IMPORTANT**

The maximum length of password is 200 symbols.

**IEEE 802.1x**

☒ Enable 802.1x

EAP method: EAP-TLS

Identity:

Private key password:

CA certificate:  Browse... Upload

Status: no file Remove

client certificate:  Browse... Upload

Status: no file Remove

Client private key:  Browse... Upload

Status: no file Remove

3. When all settings are complete, move the Network Camera to the protected LAN by connecting it to an 802.1x enabled switch. The devices will then start the authentication automatically.

#### NOTE:

► *The authentication process for 802.1x:*

1. The Certificate Authority (CA) provides the required signed certificates to the Network Camera (the supplicant) and the RADIUS Server (the authentication server).
2. A Network Camera requests access to the protected LAN using 802.1X via a switch (the authenticator). The client offers its identity and client certificate, which is then forwarded by the switch to the RADIUS Server, which uses an algorithm to authenticate the Network Camera and returns an acceptance or rejection back to the switch.
3. The switch also forwards the RADIUS Server's certificate to the Network Camera.
4. Assuming all certificates are validated, the switch then changes the Network Camera's state to authorized and is allowed access to the protected network via a pre-configured port.

## Security > Miscellaneous

The embedded TrendMicro utility provides the protection against Cross-Site Request Forgery. Cross-site request forgery is also known as one-click attack or session riding and is abbreviated as CSRF. CSRF is a type of malicious exploit of a website, in this case, the camera. Unauthorized commands are transmitted from a user that the web application trusts, using the mechanism of forging a trusted user's own request with a request containing his own cookies, etc. Different ways can be used for a malicious website to transmit such commands. They can be specially-crafted image tags, hidden forms, and JavaScript XMLHttpRequests. The malicious attack can occur without users' interaction or even knowing it.

### Miscellaneous

☒ Enable Cross-Site Request Forgery(CSRF) protection.

We strongly recommend not to disable this protection. Disabling this feature will expose your camera to risks.

Save

## PTZ > PTZ settings

This section explains how to control the Network Camera's Pan/Tilt/Zoom operation.

1. **Optical Zoom:** Control the e-PTZ operation. Within a field of view, it allows users to quickly move the focus to a target area for close-up viewing without physically moving the camera.
2. **Mechanical:** Connect the Network Camera to a PTZ driver or scanner via the RS485 interface.

### Optical Zoom PTZ Operation (E-PTZ Operation)

The e-PTZ control settings section will be displayed as shown below:

The screenshot displays the PTZ settings interface with the 'Optical zoom' tab selected. At the top, there are tabs for 'Optical zoom' and 'Mechanical'. Below the tabs, a 'Select stream' dropdown is set to '1'. A live video feed shows a bridge over water with a zoom factor of 'x1.8' displayed in the top left corner. To the right of the video feed are controls for 'Home', 'Zoom' (with '-' and '+' buttons), 'Focus' (with '-' and '+' buttons), 'Zoom speed' (set to 5), 'Focus speed' (set to 0), and a 'Go to' dropdown menu. Below the video feed, there are sections for 'Home location settings' with buttons for 'Set current position as home' and 'Restore home position to default', 'Preset settings' with a 'Name' field and a 'Remove' button, and 'Misc settings' with checkboxes for 'Enable digital zoom' and 'Zoom factor display' (which is checked). A 'Save' button is located at the bottom right of the settings area.

Note that the Digital Zoom does not provide telephoto capability with no optical resolution gains in the process.

For e-PTZ related details, please refer to page 116.

#### Enable Digital Zoom

In addition to the 20x or 30x optical zoom w/ auto focus, you can digitally zoom in on the view if you enable this feature. The zoom ratio is 48x zoom (4x on IE plug-in and 12x built-in).

#### Zoom factor display

If you select this checkbox, the zoom indicator will be displayed on the home page when you zoom in/out the live viewing window as the picture shown on the next page.

When completed with the e-PTZ settings, click **Save** to enable the settings on this page.

## Home page in the E-PTZ Mode

- The e-Preset Positions will also be displayed on the home page. Select one from the drop-down list, and the Network Camera will move to the selected position.
- If you have configured different preset positions for different streams, you can select one of the video streams to display its separate preset positions.

Note that you can select the Mechanical PTZ control via the PTZ menu on the main page if you have configured the Mechanical PTZ settings (e.g., when mounted on a scanner).

## Preset settings

You can configure some preset positions in different zoom ratios as preset points. Please follow the steps below to set up preset points or positions:

1. Zoom to a different zoom ratio.
2. Enter a name in the Name entry. An Add button will appear.
3. Click on the Add button to create a preset position.
4. Repeat the above process to create more preset positions.
5. Click Save to preserve your configuration changes.

## PTZ

### Mechanical PTZ Configuration

Select the “Mechanical” tab to display the RS485 Settings:

### RS485 Settings

Disable: Select this option to disable this function.

PTZ camera: Select this option to enable PTZ operation.

To utilize this feature, please connect the Network Camera to a PTZ driver or scanner via RS485 serial interface first. Then you can configure the PTZ driver and RS485 port with the following settings.

VIVOTEK provides the following PTZ drivers: DynaDome/SmartDOME, Lilin PIH-7x00, Pelco D, and Pelco P protocol. If none of the above PTZ drivers is supported by your PTZ scanner, please select **Custom camera** (scanner). Please refer to the documentation of your PTZ scanner to determine the Camera ID, PTZ driver, and Port settings. The Camera ID is necessary to control multiple cameras. If you click **Save** to enable this function, the camera control panel will be displayed on the main page.

There is a terminator circuit on the RS485 bus, and can not be turned off.

**Transparent HTTP Tunnel:** If you want to use your own RS-485 device, you can use UART commands to build a Transparent HTTP Tunnel. The UART commands will be sent through HTTP tunnel established between the RS-485 device and the camera. For detailed application notes, please refer to URL Commands started on page 154 or <http://www.vivotek.com/faq/integrationq01.html>.

## Preset Positions

If you select DynaDome/SmartDOME, Lilin PIH-7x00, Pelco D, Pelco P protocol as the PTZ driver and click the **Save** button, the **Preset Position** button will become available. Click on the **Preset Position** button to open the configuration window. A total of 20 preset positions can be configured.

Please follow the steps below to configure preset positions:

1. Adjust the shooting area to the desired position using the buttons on the right side of the window.
2. Enter a name for the preset position, which allows for up to forty characters. Click **Add** to enable the settings. The preset positions will be displayed under the Preset Location list on the left-hand side.
3. To add additional preset positions, please repeat steps 1~2.
4. To remove a preset position from the list, select it from the drop-down list and click **Remove**.
5. The preset positions will also be displayed on the main page. Please refer to the illustration on the next page.
6. Click **Save** to enable the settings.

## Home page in Mechanical PTZ Mode

The Preset Positions will also be displayed on the home page. Select one from the drop-down list, and the Network Camera will move to the selected preset position.

### NOTE:

- ▶ The Preset Positions will also be displayed on the Home page. Select one from the **Go to** menu, and the Network Camera will move to the selected preset position.
- ▶ Click Patrol: The Network Camera will patrol along the selected positions repeatedly.

## Event > Event settings

This section explains how to configure the Network Camera to respond to particular situations (event). A typical application is that when a motion is detected, the Network Camera sends buffered images to an FTP server or e-mail address as notifications. Click on **Help**, there is an illustration shown in the pop-up window explaining that an event can be triggered by many sources, such as motion detection or external digital input devices. When an event is triggered, you can specify what type of action that will be performed. You can configure the Network Camera to send snapshots or videos to your email address or FTP site.

### Event

To configure an event with reactive measures such as recording video or snapshots, it is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated. An event is an action initiated by a user-defined trigger source. In the **Event** column, click **Add** to open the event settings window. Here you can arrange three elements -- Schedule, Trigger, and Action to set an event. A total of 3 event settings can be configured.

- Event name: Enter a name for the event setting.
- Enable this event: Select this checkbox to enable the event setting.
- Priority: Select the relative importance of this event (High, Normal, or Low). Events with a higher priority setting will be executed first.
- Detect next motion detection or digital input after  seconds: Enter the duration in seconds to pause motion detection after a motion is detected. This can prevent event-related actions to take place too frequently.

### 1. Schedule

Specify the period of time during which the event trigger will take effect. Please select the days of the week and the time in a day (in 24-hr time format) for the event triggering schedule. For example, you may prefer an event to be triggered only during the off-office hours.

### 2. Trigger

This is the cause or stimulus which defines when to trigger the Network Camera. The trigger source can be configured to use the Network Camera's built-in motion detection mechanism or external digital input devices.

There are several choices of trigger sources as shown on the next page. Select the item to display the detailed configuration options.

#### ■ Video motion detection

This option makes use of the built-in motion detection mechanism as a trigger source. To enable this function, you need to configure a Motion Detection Window first. For more information, please refer to Motion Detection on page 123 for details.

☒ Video motion detection

Normal: ☐ door

Profile: ☐ hallway

Note: Please configure Motion detection first

#### ■ Periodically

This option allows the Network Camera to trigger periodically for every other defined minute. Up to 999 minutes are allowed.

☒ Periodically

Trigger every other  minutes

#### ■ Digital input

This option allows the Network Camera to use an external digital input device or sensor as a trigger source. Depending on your application, there are many choices with digital input devices on the market which help detect changes in temperature, vibration, sound, light, etc.

☒ Digital input

Digital input 1 : ☒ Active ☐ Normal to Active ☐ Active to Normal

Digital input 2 : ☐ Active ☐ Normal to Active ☐ Active to Normal

Digital input 3 : ☐ Active ☐ Normal to Active ☐ Active to Normal

#### ■ System boot

This option triggers the Network Camera when the power to the Network Camera is disconnected and re-connected.

#### ■ Recording notify

This option allows the Network Camera to trigger when the recording disk is full or when recording starts to overwrite older data.

#### ■ Audio detection

A preset threshold can be configured with an external microphone as the trigger to system event. The triggering condition can be an input exceeding or falling below a threshold. Audio detection can take place as a complement to motion detection or as a method to detect activities not covered by the camera's view.

#### ■ Manual Triggers

This option allows users to enable event triggers manually by clicking the on/off button on the homepage. Please configure 1 to 3 associated events before using this function.

#### ■ VADP

It is presumed that you already uploaded and enabled the VADP modules before you can associate VADP triggers with an Event setting.

Click on the Set VADP Trigger button to open the VADP setup menu. The triggering conditions available with 3rd-party software modules known as VADP will be listed. Use the arrow buttons to select these triggers. Users may implant these modules for different purposes such as triggering motion detection, or applications related to video analysis, etc. Please refer to page 139 for the configuration options with VADP modules.

Once the triggers are configured, they will be listed under the VADP option.

### 3. Action

Define the actions to be performed by the Network Camera when a trigger is activated.

- Trigger digital output for ☐ seconds  
Select this option to turn on the external digital output device when a trigger is activated. Specify the length of the trigger interval in the text box.
- Backup media if the network is disconnected  
Select this option to backup media file on SD card if the network is disconnected. This function will only be displayed after you set up a network storage (NAS). The media to back up can include snapshot images, video, or system logs depending on your event settings.

## Add server

It is necessary to configure the server and media settings so that the Network Camera will know what action to take (such as which server to send the media files to) when a trigger is activated. Click **Add server** to open the server setting window. You can specify where the notification messages are sent to when a trigger is activated. A total of 5 server settings can be configured.

There are four choices of server types available: Email, FTP, HTTP, and Network storage. Select the item to display the detailed configuration options. You can configure either one or all of them.

### Server type - Email

Select to send the media files via email when a trigger is activated.

- Server name: Enter a name for the server setting.
- Sender email address: Enter the email address of the sender.
- Recipient email address: Enter the email address of the recipient.
- Server address: Enter the domain name or IP address of the email server.
- User name: Enter the user name of the email account if necessary.
- Password: Enter the password of the email account if necessary.
- Server port: The default mail server port is set to 25. You can also manually set another port.

If your SMTP server requires a secure connection (SSL), select **This server requires a secure connection (SSL)**.

To verify if the email settings are correctly configured, click **Test**. The result will be shown in a pop-up window. If successful, you will also receive an email indicating the result.

Click **Save server** to enable the settings.

Note that after you configure the first event server, the new event server will automatically display on the Server list. If you wish to add other server options, click **Add server**.

| Server                         | Media          | Extra parameter                              |
|--------------------------------|----------------|----------------------------------------------|
| <input type="checkbox"/> SD    | -----None----- | <a href="#">SD test</a> <a href="#">View</a> |
| <input type="checkbox"/> Email | -----None----- |                                              |
| <a href="#">Add server</a>     |                | <a href="#">Add media</a>                    |

### Server type - FTP

Select to send the media files to an FTP server when a trigger is activated.

Server name:

Server Type

☐ Email  
☒ FTP

Server address:   
 Server port:   
 User name:   
 Password:   
 FTP folder name:   
☒ Passive mode

☐ HTTP  
☐ Network storage

- Server name: Enter a name for the server setting.
- Server address: Enter the domain name or IP address of the FTP server.
- Server port: By default, the FTP server port is set to 21. It can also be assigned to another port number between 1025 and 65535.
- User name: Enter the login name of the FTP account.
- Password: Enter the password of the FTP account.
- FTP folder name  
Enter the folder where the media files will be placed. If the folder name does not exist, the Network Camera will automatically create one on the FTP server.

### ■ Passive mode

Most firewalls do not accept new connections initiated from external requests. If the FTP server supports passive mode, select this option to enable passive mode FTP and allow data transmission to pass through the firewall. The firmware default has the Passive mode checkbox selected.

To verify if the FTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will also receive a test.txt file on the FTP server.

Click **Save server** to enable the settings.

### Server type - HTTP

Select to send the media files to an HTTP server when a trigger is activated.

 A screenshot of a configuration dialog box titled 'Server name: HTTP'. It contains a 'Server Type' section with three radio buttons: 'Email', 'FTP', and 'HTTP' (which is selected). Below this, there are input fields for 'URL:' (containing 'http://192.168.5.10/cgi-bin/upload.cgi'), 'User name:', and 'Password:'. At the bottom, there are three buttons: 'Test', 'Save server', and 'Close'.

- Server name: Enter a name for the server setting.
- URL: Enter the URL of the HTTP server.
- User name: Enter the user name if necessary.
- Password: Enter the password if necessary.

To verify if the HTTP settings are correctly configured, click **Test**. The result will be shown in a pop-up window as shown below. If successful, you will receive a test.txt file on the HTTP server.

Click **Save server** to enable the settings.

**Network storage:**

Select to send the media files to a networked storage when a trigger is activated. Please refer to **NAS server** on page 145 for details. Note that only one NAS server can be configured.

Click **Save server** to enable the settings.

**Action**

☐ Backup media if the network is disconnected

| <input type="checkbox"/> | <a href="#">Recording1 58.mp4</a> | 2526004 | 2016/01/20 | 07:58:28 |
| <input type="checkbox"/> | <a href="#">Recording1 59.mp4</a> | 2563536 | 2016/01/20 | 07:59:28 |

**The format is: File name prefix + Minute (mm)**

You can set up the file name prefix on Add media page. Please refer to next page for detailed information.

## Add media

Click **Add media** to open the media setting window. You can specify the type of media that will be sent when a trigger is activated. A total of 5 media settings can be configured. There are three choices of media types available: Snapshot, Video Clip, and System log. Select the item to display the detailed configuration options. You can configure either one or all of them.

### Media type - Snapshot

Select to send snapshots when a trigger is activated.

- Media name: Enter a name for the media setting.
- Source: Select to take snapshots from any of the video profiles.
- Send ☐ pre-event images  
The Network Camera has a buffer to temporarily hold data up to a certain limit. Enter a number to decide how many images to capture before a trigger is activated. Up to 7 images can be generated.
- Send ☐ post-event images  
Enter a number to decide how many images to capture after a trigger is activated. Up to 7 images can be generated.

For example, if both the Send pre-event images and Send post-event images are set to 7, a total of 15 images can be generated after a trigger is activated.

- File name prefix  
Enter the text that will be appended to the front of the file name.

- Add date and time suffix to the file name  
Select this option to add a date/time suffix to the file name.  
For example:

Click **Save media** to enable the settings.

Note that after you set up the first media server, a new column for media server will automatically display on the Media list. If you wish to add more media options, click **Add media**.

#### Media type - Video clip

Select to send video clips when a trigger is activated.

Media name:

**Media type**

Attached media:

☐ Snapshot

☒ Video clip

Source:

Pre-event recording:  seconds [0~9]

Maximum duration:  seconds [1~20]

Maximum file size:  Kbytes [50~4096]

File name prefix:

☐ System log

- Media name: Enter a name for the media setting.
- Source: Select the source of video clip from a media profile.
- Pre-event recording  
The Network Camera has a buffer to temporarily hold data up to a certain limit. Enter a number to decide the duration of recording before a trigger is activated. Up to 9 seconds can be set.
- Maximum duration  
Specify the maximum recording duration in seconds. The duration can be up to 10 seconds.  
For example, if pre-event recording is set to five seconds and the maximum duration is set to ten seconds, the Network Camera continues to record for another 4 seconds after a trigger is activated.

■ **Maximum file size**

Specify the maximum file size allowed. Some users may need to stitch the video clips together when searching and packing up forensic evidence.

■ **File name prefix**

Enter the text that will be appended to the front of the file name.

For example:

Click **Save media** to enable the settings.

### Media type - System log

Select to send a system log when a trigger is activated.

Click **Save media** to enable the settings, then click **Close** to exit the page.

| Server                        | Media                                                                     | Extra parameter                              |
|-------------------------------|---------------------------------------------------------------------------|----------------------------------------------|
| <input type="checkbox"/> SD   | ---None---                                                                | <a href="#">SD test</a> <a href="#">View</a> |
| <input type="checkbox"/> mail | ---None---<br>Add server <a href="#">Add server</a> <a href="#">media</a> |                                              |

In the Event settings column, the Servers and Medias you configured will be listed; please make sure the Event -> Status is indicated as **ON**, in order to enable the event triggering action.

When completed, click the **Save event** button to enable the settings and click **Close** to exit Event Settings page. The new Event / Server settings / Media will appear in the event drop-down list on the Event setting page.

Please see the example of the Event setting page below:

**Event**

| Name                   | Status             | Sun | Mon | Tue | Wed | Thu | Fri | Sat | Time        | Trigger |                                       |
|------------------------|--------------------|-----|-----|-----|-----|-----|-----|-----|-------------|---------|---------------------------------------|
| <a href="#">event1</a> | <a href="#">ON</a> | V   | V   | V   | V   | V   | V   | V   | 00:00~24:00 | seq     | <input type="button" value="Delete"/> |

[Help](#)

**Server settings**

| Name                 | Type | Address/Location    |                                       |
|----------------------|------|---------------------|---------------------------------------|
| <a href="#">HTTP</a> | http | http://192.168.5.10 | <input type="button" value="Delete"/> |

**Media**

Available memory space: 13000KB

| Name                       | Type      |                                       |
|----------------------------|-----------|---------------------------------------|
| <a href="#">Snapshot</a>   | snapshot  | <input type="button" value="Delete"/> |
| <a href="#">Video clip</a> | videoclip | <input type="button" value="Delete"/> |
| <a href="#">System log</a> | systemlog | <input type="button" value="Delete"/> |

When the Event Status is [ON](#), the event configuration above is triggered by motion detection, the Network Camera will automatically send snapshots via e-mail.

If you want to stop the event trigger, you can click on the [ON](#) button to turn it to [OFF](#) status or click the **Delete** button to remove the event setting.

To remove a server setting from the list, select a server name from the drop-down list and click **Delete**. Note that you can only delete a server setting when it is not applied in an existing event setting.

To remove a media setting from the list, select a media name from the drop-down list and click **Delete**. Note that you can only delete a media setting when it is not applied in an existing event setting.

## Applications > Motion detection

This section explains how to configure the Network Camera to enable motion detection. A total of 5 motion detection windows can be configured.

Follow the steps below to enable motion detection:

1. Click **New** to add a new motion detection window.
2. In the Window Name text box, enter a name for the motion detection window.
  - Use 4 mouse clicks to designate a detection window. You can change the window shape by dragging the corner marks to a preferred location.
  - Drag the item size tab to change the minimum size of item to trigger an alarm. An item size box will appear in the center of screen for your reference (in semi-transparent red). An intruding object must be larger than the Item size to trigger an alarm. Change the item size according to the live view.
  - To delete a window, click the X mark on the right of the window name.
3. Define the sensitivity to moving objects by moving the Sensitivity slide bar. Note that a high sensitivity is prone to produce false alarms such as the fast changes of light (such as day/night mode switch, turning lights on/off). A movement must persist longer than 0.3 second for the motion to be detected.
4. Click **Save** to enable the settings.
5. Select **Enable motion detection** to enable this function.

For example: ☒ Enable motion detection

The Percentage Indicator will rise or fall depending on the variation between sequential images. When motions are detected by the Network Camera and are considered to exceed the preset threshold, the red bar rises. Meanwhile, the motion detection window will be outlined in red.

Photos or videos can be captured instantly and configured to be sent to a remote server (via an Email or FTP server). For more information on how to configure an event setting, please refer to Event settings on page 120.

A green bar indicates that even though motions have been detected, the event has not been triggered because the image variations still fall under the preset threshold.

If you want to configure other motion detection settings for day/night/schedule mode (e.g., for a different lighting condition), please click **Profile** to open the Motion Detection Profile Settings page as shown below. Another three motion detection windows can be configured on this page.

☒ Enable motion detection

Normal light mode **Profile mode**

Window name: Motion1

Item size: 15

☒ Enable to apply these settings at

☒ Night mode

☐ Schedule mode [hh:mm]

Sensitivity: 80%

New Save

Please follow the steps below to set up a profile:

1. Create a new motion detection window.
2. Click the **Profile mode** tab.
3. Select the applicable Schedule mode. Please manually enter a time range.
4. Click **Save** to enable the settings and click **Close** to exit the page.

This motion detection window will also be displayed on the Event Settings page. You can go to **Event > Event settings > Trigger** to select it as a trigger source. Please refer to page 143 for detailed information.

## NOTE:

### ► How does motion detection work?

There are two motion detection parameters: *Sensitivity* and *Min. Item Size*. As illustrated above, frame A and frame B are two sequential images. Pixel differences between the two frames are detected and highlighted in gray in which the sensitivity setting will take effect. Sensitivity is a value that expresses the sensitivity to moving objects. A higher sensitivity setting allows camera to detect slight movements while a lower sensitivity setting will neglect them.

The minimum item size is a threshold value that determines how many “alerted pixels” can trigger an event. When the size of an intruding object is larger than the minimum size, and its movement persist for 0.3 second, the motion is judged to exceed the defined threshold; and the motion window will be outlined in red. With a large minimum item size, the size of moving object in frame C is considered as smaller than the minimum item size, no motion alarm is triggered. With a smaller minimum item size, the same moving object in frame D triggers the alarm.

For applications that require a high level of security management, it is suggested to use **higher** sensitivity settings. However, a higher sensitivity level can also produce false alarms due to fast light changes when switching between the day and night modes, AE switch, turning the light on or off, etc.

## Applications > DI and DO

**Digital input**

Normal status: ☒ High ☐ Low

Current status: **High**

**Digital output**

Normal status: ☒ Open ☐ Grounded

Current status: **Open**

Save

Digital input: Select High or Low as the Normal status for the digital input connection. Connect the digital input pin of the Network Camera to an external device to detect the current connection status.

Digital output: Select Grounded or Open to define the normal status for the digital output. Connect the digital output pin of the Network Camera to an external device to determine the current status.

Set up the event source as DI on **Event > Event settings > Trigger**. Please refer to page 121 for detailed information.

## Applications > Audio detection

Audio detection, along with video motion detection, is applicable in the following scenarios:

1. Detection of activities not covered by camera view, e.g., a loud input by gun shots or breaking a door/window.
2. A usually noisy environment, such as a factory, suddenly becomes quiet due to a breakdown of machines.
3. A PTZ camera can be directed to turn to a preset point by the occurrence of audio events.
4. Dark environments where video motion detection may not function well.

The red circles indicate where the audio alarms can be triggered when breaching or falling below the preset threshold.

How to configure Audio detection:

1. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
2. Use a mouse click to drag the Alarm level tab to a preferred location on the slide bar.
3. Select the "Enable audio detection" checkbox and click Save to enable the feature.

### NOTE:

1. Note that the volume numbers (0~100) on the side of wave diagram does not represent decibel (dB). Sound intensity level has already been mapped to preset values. You can, however, use the real-world inputs at your installation site that are shown on the wave diagram to configure an alarm level.
2. To configure this feature, you must not mute the audio in **Configuration > Media > Audio**. The default of the camera can be muted due to the lack of an internal microphone. An external microphone is provided by users.

You can use the **Profile** window to configure a different Audio detection setting. For example, a place can be noisy in the day time and become very quiet in the night.

1. Click on the **Enable this profile** checkbox. Once the Audio detection window is opened, the current sound input will be interactively indicated by a fluctuating yellow wave diagram.
2. Use a mouse click to drag the **Alarm level** tab to a preferred location on the slide bar.
3. Select the **Day**, **Night**, or **Schedule** mode check circles. You may also manually configure a period of time during which this profile will take effect.
4. Click **Save** and then click **Close** to complete your configuration.

**General settings**

☒ Enable this profile

This profile is applied to:

☐ Day mode

☐ Night mode

☒ Schedule mode

From 18:00 to 06:00 [hh:mm]

Close Save

#### IMPORTANT:

- If the Alarm level and the received volume are set within a range of 20% on the wave diagram, frequent alarms will be triggered. It is recommended to set the Alarm level farther apart from the detected sound level.
- To configure and enable this feature, you **must not** configure video stream #1 into **Motion JPEG**. If an external microphone input is connected and recording of audio stream is preferred, audio stream is transmitted between camera and viewer/recording station **along with stream #1**.
- Refer to page 77 for Audio settings, and page 71 for video streaming settings.

## Applications > Package management - a.k.a., VADP (VIVOTEK Application Development Platform)

**Upload package**
  
☐ Save to SD card
   
 Select file

     Used size:       0 KBytes       Use (%):       0 %
   
**Memory status:**
  
     Total size:       24576 KBytes       Free size:       24576 KBytes
   
**Package list**
  

| Module name                                                                                                                                                                                 | Vendor | Version | Status | License |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|---------|--------|---------|
| <input type="button" value="Backup"/> <input type="button" value="Reload"/> <input type="button" value="Restore"/> <input type="button" value="Start"/> <input type="button" value="Stop"/> |        |         |        |         |

Users can store and execute VIVOTEK's or 3rd-party software modules onto the camera's flash memory or SD card. These software modules can apply in video analysis for intelligent video applications such as license plate recognition, object counting, or as an agent for edge recording, etc.

- Once the software package is successfully uploaded, the module configuration (vadp.xml) information is displayed. When uploading a module, the camera will examine whether the module fits the predefined VADP requirements. Please contact our technical support or the vendor of your 3rd-party module for the parameters contained within.
- Users can also run VIVOTEK's VADP packages as a means to access updated functionality instead of replacing the entire firmware.
- Note that for some cameras the flash is too small to hold VADP packages. These cameras will have its "Save to SD card" checkbox selected and grayed-out for all time.
- The file system of SD card (FAT32) does not support soft (symbolic) link. It will return failure if your module tries to create soft links on SD card.

To utilize a software module, acquire the software package and click **Browse** and **Upload** buttons. The screen message for a successful upload is shown below:

To start a module, select the checkcircle in front, and click the **Start** button.

If you should need to remove a module, select the checkcircle in front and then click the **Stop** button. By then the module status will become **OFF**, and the **X** button will appear at the end of the row. Click on the **X** button to remove an existing module.

When prompted by a confirm message, Click **Yes** to proceed.

Note that the actual memory consumed while operating the module will be indicated on the **Memory status** field. This helps determine whether a running module has consumed too much of system resources.

On the License page, register and activate the license for using VIVOTEK's VADP modules. You should acquire the license key elsewhere, and manually upload to the network camera.

Follow the onscreen instruction on VIVOTEK's website for the registration procedure.

## Recording > Recording settings

This section explains how to configure the recording settings for the Network Camera.

### Recording Settings

Insert your SD card and click here to test

**Recording settings**

| Name                                              | Status | Sun | Mon | Tue | Wed | Thu | Fri | Sat | Time | Source | Destination | Delete |
|---------------------------------------------------|--------|-----|-----|-----|-----|-----|-----|-----|------|--------|-------------|--------|
| <div>Add</div> <div><a href="#">SD test</a></div> |        |     |     |     |     |     |     |     |      |        |             |        |

Note: Before setup recording, you may setup network storage via [NAS server](#) page

#### NOTE:

- Please remember to format your SD card via the camera's web console (in the Local storage . SD card management page) when using it for the first time. Please refer to page 147 for detailed information.

### Recording Settings

Click **Add** to open the recording setting window. On this page, you can define the adaptive recording, recording source, recording schedule, and recording capacity. A total of 2 recording settings can be configured.

**Recording name:** video

☒ Enable this recording

☒ With adaptive recording ([Help](#))

Pre-event recording: 5 seconds [0~9]

Post-event recording: 5 seconds [0~10]

Priority: Normal

Source: Max view

**1. Trigger**

**2. Destination**

**Trigger**

☒ Schedule

☒ Sun ☒ Mon ☒ Tue ☒ Wed ☒ Thu ☒ Fri ☒ Sat

**Time**

☒ Always

☐ From 00:00 to 24:00 [hh:mm]

☐ Network fail

Note: To enable recording notification please configure [Event](#) first

Save Close

- Recording name: Enter a name for the recording setting.
- Enable this recording: Select this option to enable video recording.
- With adaptive recording:  
Select this option will activate the frame rate control according to alarm trigger. The frame control means that when there is a triggered alarm, the frame rate will raise up to the value you've configured on the Video quality page. Please refer to page 72 for more information.

If you enable adaptive recording on a camera, only when an event is triggered on Camera A will the server record the full frame rate streaming data; otherwise, it will only request the I frame data during normal monitoring, thus effectively saves bandwidths and storage space.

#### NOTE:

- ▶ To enable adaptive recording, please make sure you've set up the trigger source such as Motion Detection, DI Device, or Manual Trigger.
- ▶ When there is no alarm trigger:
  - JPEG mode: record 1 frame per second.
  - H.264 mode: record the I frame only.
- ▶ When the I frame period is >1s on Video settings page, firmware will force decrease the I frame period to 1s when adaptive recording is enabled.

The alarm trigger includes: motion detection and DI detection. Please refer to Event Settings on page 120.

#### ■ Pre-event recording and post-event recording

The Network Camera has a buffer that temporarily holds data for a period of time. Therefore, when an event occurs, the camera can retrieve image frames taken several seconds ago. Enter a number to define the duration of recording before and after a trigger is activated.

- Priority: Select the relative importance of this recording (High, Normal, or Low). Recording with a higher priority setting will be executed first.
- Source: Select a video stream as the recording source.

#### NOTE:

- ▶ To enable recording notification please configure **Event settings** first. Please refer to page 120.

Please follow the steps below to set up the recording.

#### 1. Trigger

Select a trigger source.

Trigger

☒ Schedule

☒ Sun ☒ Mon ☒ Tue ☒ Wed ☒ Thu ☒ Fri ☒ Sat

Time

☒ Always

☐ From  to  [hh:mm]

☐ Network fail

- Schedule: The server will start to record files on the local storage or network storage (NAS).
- Network fail: Since network fail, the server will start to record files on the local storage (SD card).

## 2. Destination

You can select the SD card or network storage (NAS) for the recorded video files. If you have not configured a NAS server, see details in the following.

Priority: Normal Source: Stream 1

1. Trigger  
↓  
2. Destination

### Destination

Destination: NAS

Capacity:

☒ Entire free space

☐ Reserved space: 100 Mbytes

☐ Enable cyclic recording

### Recording file management

Maximum duration: 1 minutes [1~30]

Maximum file size: 100 MB [100~2000]

File name prefix:

Note: To enable recording notification please configure [Event](#) first

Save Close

## NAS server

Click **Add NAS server** to open the server setting window and follow the steps below to set up:

1. Fill in the information for your server.

For example:

1. Trigger  
↓  
2. Destination

### Add NAS server

Destination: SD

Server name: NAS

Server type

☒ Network storage

Network storage location: \\192.168.5.12\NAS

(For example: \\my\_nas\disk\folder)

Workgroup: vivotek

User name: ritiali

Password: .....

Test Close Save server

Network storage path  
(\\server name or IP address\folder name)

User name and password for your server

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

If successful, you will receive a test.txt file on the network storage server.

3. Enter a server name.

4. Click **Save** to complete the settings and click **Close** to exit the page.

Recording name:

☒ Enable this recording

☒ With adaptive recording ([Help](#))

Pre-event recording:  seconds [0~9]

Post-event recording:  seconds [0~10]

Priority:

Source:

**Destination**

Destination:

Capacity:

☒ Entire free space

☐ Reserved space:  Mbytes

☐ Enable cyclic recording

**Recording file management**

Maximum duration:  minutes [1~30]

Maximum file size:  MB [1~900]

File name prefix:

Note: To enable recording notification please configure [Event](#) first

■ **Capacity:** You can select either the entire storage space available or specify a reserved space. The recording size limit must be larger than the reserved space for cyclic recording. The reserved space is used during cyclic recording to prevent malfunctions that might occur during the transaction stage when the video feeds are about to fill up the storage space, and new data is still coming. This value must be larger than 15 MBytes.

■ **Enable cyclic recording:** If you check this item, when the maximum capacity is reached, the oldest files will be overwritten by the latest ones.

■ **File name prefix:** Enter the text that will be appended to the front of the file name.

If you want to enable recording notification, please click [Event](#) to set up. Please refer to **Event > Event settings** on page 120 for more details.

When completed, select **Enable this recording**. Click **Save** to enable the setting and click **Close** to exit

If you want to enable recording notification, please click [Event](#) to configure event triggering settings. Please refer to **Event > Event settings** on page 120 for more details.

When completed, select **Enable this recording**. Click **Save** to enable the setting and click **Close** to exit this page. When the system begins recording, it will send the recorded files to the network storage. The new recording name will appear in the drop-down list on the recording page as shown below.

To remove a recording setting from the list, select a recording name from the drop-down list and click **Delete**.

**Recording settings**

| Name                      | Status             | Sun | Mon | Tue | Wed | Thu | Fri | Sat | Time        | Source  | Destination         | Delete                                |
|---------------------------|--------------------|-----|-----|-----|-----|-----|-----|-----|-------------|---------|---------------------|---------------------------------------|
| <a href="#">recording</a> | <a href="#">ON</a> | V   | V   | V   | V   | V   | V   | V   | 00:00~24:00 | stream1 | <a href="#">NAS</a> | <input type="button" value="Delete"/> |

[SD test](#)

- Click [recording](#) (Name): Opens the Recording Settings page to modify.
- Click [ON](#) (Status): The Status will become [OFF](#) and stop recording.
- Click [NAS](#) (Destination): Opens the file list of recordings as shown below. For more information about folder naming rules, please refer to page 127 for details.

|                          |                          |                          |

## Storage

### NOTE:

- It is recommended to turn OFF the recording activity before you remove an SD card from the camera.
- The lifespan of an SD card is limited. Regular replacement of the SD card can be necessary.
- Camera filesystem takes up several megabytes of memory space. The storage space cannot be used for recording.
- Using an SD card that already contains data recorded by another device should not be used in this camera.
- Please do not modify or change the folder names in the SD card. That may result in camera malfunctions.

## Storage > SD card management

This section explains how to manage the local storage on the Network Camera. Here you can view SD card status, and implement SD card control.

### SD card status

This column shows the status and reserved space of your SD card. Please remember to format the SD card when using for the first time.

**SD card status**

SD card status: Detached no SD card

Total size: 0 KBytes Free size: 0 KBytes  
Used size: 0 KBytes Use (%): 0 %

Format

**SD card status**

SD card status: Ready

File system: FAT32

|             |                 |            |                 |
|-------------|-----------------|------------|-----------------|
| Total size: | 15323496 KBytes | Free size: | 15087976 KBytes |
| Used size:  | 235520 KBytes   | Use (%):   | 1.537 %         |

### SD card format

The Linux kernel EXT4 file system format applies to SD card larger than 32GB. However, if EXT4 is applied, the computers running Windows will not be able to access the contents on the SD card unless using some 3rd-party software .

**SD card format**

Ext4  
Ext4  
FAT32

Format

## SD card control

**SD card control**

☐ Enable cyclic storage

☐ Enable automatic disk cleanup

Maximum duration for keeping files:  days

Save

- **Enable cyclic storage:** Check this item if you want to enable cyclic recording. When the maximum capacity is reached, the oldest file will be overwritten by the latest one.
- **Enable automatic disk cleanup:** Check this item and enter the number of days you wish to retain a file. For example, if you enter “7 days”, the recorded files will be stored on the SD card for 7 days.

Click **Save** to enable your settings.

## Storage > NAS management

### NAS Setup

Click **NAS management tab** to open the server setting window and follow the steps below to set up:

1. Fill in the information for the access to the shared networked storage.

For example:

**NAS setup**

Network storage location:

(For example: \\my\_nas\disk\folder)

Workgroup:

User name:

Password:

Test

Mount

Unmount

2. Click **Test** to check the setting. The result will be shown in the pop-up window.

If successful, you will receive a test.txt file on the networked storage server.

3. Click **Mount** to complete the settings.

## **NAS management**

- Minimum reserved storage space: The reserved space can be used as a safe buffer especially when the cyclic recording function is enabled, during the transaction stage when a storage space is full and the incoming streaming data is about to overwrite the previously saved videos.
- Enable cyclic storage: Allows previous recordings to be overwritten by new recordings.
- Enable automatic disk cleanup: Allows you to specify how long the recording files will be kept on the NAS storage.

Maximum duration for keeping files: \_\_ days: Specify the days of retention of the video files recorded to the NAS storage.

## Storage > Content management

This section explains how to manage the content of recorded videos on the Network Camera. Here you can search and view the records and view the searched results.

### Searching and Viewing the Records

This column allows the user to set up search criteria for recorded data. If you do not select any criteria and click **Search** button, all recorded data will be listed in the **Search Results** column.

Search

- File attributes: Select one or more items as your search criteria.
- Trigger time: Manually enter the time range you want to search for contents created at a specific point in time.

Click **Search** and the recorded data corresponding to the search criteria will be listed in **Search Results** window.

## Search Results

The following is an example of search results. There are four columns: Trigger time, Media type, Trigger type, and Locked. Click  to sort the search results in either direction.

### Numbers of entries displayed on one page

**Search results**

| <input type="checkbox"/> | Name  | Trigger type | Starting time    | Ending time      |
|--------------------------|-------|--------------|------------------|------------------|
| <input type="checkbox"/> | to SD | Periodically | Today at 3:45 PM | Today at 3:58 PM |
| <input type="checkbox"/> | to SD | Periodically | Today at 3:58 PM | --               |

| <input type="checkbox"/> | test  | Motion       | Today at 3:49 PM | Today at 3:49 PM |
| <input type="checkbox"/> | test  | Motion       | Today at 3:50 PM | Today at 3:50 PM |
| <input type="checkbox"/> | test  | Motion       | Today at 3:50 PM | Today at 3:50 PM |

Click to open a live view

10    1 / 3  

 Download  Lock/Unlock  JPEGs to AVI  Remove

- **Play:** Click on a search result which will highlight the selected item. A Play window will appear on top for immediate review of the selected file.  
For example:

- **Download:** Click on a search result to highlight the selected item in purple as shown above. Then click the **Download** button and a file download window will pop up for you to save the file.
- **JPEGs to AVI:** This function only applies to “JPEG” format files such as snapshots. You can select several snapshots from the list, then click this button. Those snapshots will be converted into an AVI file.

- **Lock/Unlock:** Select the checkbox in front of a desired search result, then click this button. The selected items will become Locked, which will not be deleted during cyclic recording. You can click again to unlock the selections.  
For example:

**Search results**

| <input type="checkbox"/>            |  | Name  | Trigger type | Starting time    | Ending time      |
|-------------------------------------|--|-------|--------------|------------------|------------------|
| <input type="checkbox"/>            |  | to SD | Periodically | Today at 3:45 PM | Today at 3:58 PM |
| <input type="checkbox"/>            |  | to SD | Periodically | Today at 3:58 PM | --               |
| <input checked="" type="checkbox"/> |  | test  | Motion       | Today at 3:45 PM | Today at 3:45 PM |
| <input checked="" type="checkbox"/> |  | test  | Motion       | Today at 3:49 PM | Today at 3:49 PM |
| <input checked="" type="checkbox"/> |  | test  | Motion       | Today at 3:49 PM | Today at 3:49 PM |
| <input type="checkbox"/>            |  | test  | Motion       | Today at 3:50 PM | Today at 3:50 PM |
| <input type="checkbox"/>            |  | test  | Motion       | Today at 3:50 PM | Today at 3:50 PM |

- **Remove:** Select the desired search results, then click this button to delete the files.

# Appendix

## URL Commands for the Network Camera

### 1. Overview

For some customers who already have their own web site or web control application, the Network Camera/Video Server can be easily integrated through URL syntax. This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, control camera functions (PTZ, output relay etc.), and get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

### 2. Style Convention

In URL syntax and in descriptions of CGI parameters, text within angle brackets denotes content that is to be replaced with either a value or a string. When replacing the text string, the angle brackets should also be replaced. An example of this is the description of the name for the server, denoted with <servername> in the URL syntax description below, that is replaced with the string myserver in the URL syntax example further down in the page.

URL syntax is denoted with the word "Syntax:" written in bold face followed by a box with the referenced syntax as shown below. For example, name of the server is written as <servername> and is intended to be replaced with the name of the actual server. This can either be a name, e.g., "mywebcam" or "thecam.adomain.net" or the associated IP number for the server, e.g., 192.168.0.220.

**Syntax:**

```
http://<servername>/cgi-bin/viewer/video.jpg
```

Description of returned data is written with "**Return:**" in bold face followed by the returned data in a box. All data is returned in HTTP format, i.e., each line is separated with a Carriage Return and Line Feed (CRLF) printed as \r\n.

**Return:**

```
HTTP/1.0 <HTTP code> <HTTP text>\r\n
```

URL syntax examples are written with "**Example:**" in bold face followed by a short description and a light grey box with the example.

**Example:** request a single snapshot image

```
http://mywebserver/cgi-bin/viewer/video.jpg
```

## 1. Overview

For some customers who already have their own web site or web control application, a Network Camera/Video server can be easily integrated through URLs. This document provides the supersets of URL commands for VIVOTEK products.

This section specifies the external HTTP-based application programming interface. The HTTP-based camera interface provides the functionality to request a single image, to control camera functions (PTZ, output relay etc.), and to get and set internal parameter values. The image and CGI-requests are handled by the built-in Web server.

## 2. Style Convention

In URL syntax and in descriptions of CGI parameters, a text within angle brackets denotes a content that is to be replaced with either a value or a string. When replacing the text string, the angle brackets shall also be replaced. An example of this is the description of the name for the server, denoted with <servername> in the URL syntax description below, which is replaced with the string myserver in the URL syntax example, also below.

URL syntax is written with the word "**Syntax:**" written in bold face followed by a box with the reference syntax as seen below. The name of the server is written as <servername>. This is intended to be replaced with the name of the actual server. This can either be a name, e.g., "mywebcam" or "thecam.adomain.net" or the associated IP number for the server, e.g., 192.168.0.220.

Special notes will be marked in RED.

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg
```

Description of returned data is written with "**Return:**" in bold face followed by the returned data shown in a box. All data is returned as HTTP formatted, i.e., starting with the string HTTP and line separated with a Carriage Return and Line Feed (CRLF) printed as \r\n.

Return:

```
HTTP/1.0 <HTTP code><HTTP text>\r\n
```

URL syntax examples are written with "**Example:**" in bold face followed by a short description and a light grey box with the example.

**Example:** Request a single snapshot image

```
http://mywebserver/cgi-bin/viewer/video.jpg
```

### 3. General CGI URL Syntax and Parameters

CGI parameters are written in lower-case and as one word without any underscores or other separators. When the CGI request includes internal camera parameters, these parameters must be written exactly as they are named in the camera or video server. The CGIs are organized in functionally-related directories under the cgi-bin directory. The file extension .cgi is required.

Syntax:

```
http://<servername>/cgi-bin/<subdir>[/<subdir>...]/<cgi>.<ext>  
[?<parameter>=<value>[&<parameter>=<value>...]]
```

**Example:** Set digital output #1 to active

<http://mywebserver/cgi-bin/dido/setdo.cgi?do1=1>

## 4. Security Level

| SECURITY LEVEL | SUB-DIRECTORY | DESCRIPTION                                                                                                   |
|----------------|---------------|---------------------------------------------------------------------------------------------------------------|
| 0              | anonymous     | Unprotected.                                                                                                  |
| 1 [view]       | viewer        | Can view, listen, and talk to camera.                                                                         |
| 4 [operator]   | operator      | Operator access rights can modify most of the camera's parameters except some privileges and network options. |
| 6 [admin]      | admin         | Administrator access rights can fully control the camera's operations.                                        |
| 7              | N/A           | Internal APIs. Unable to be changed by any external interfaces.                                               |

A viewer account can access all APIs with security level 0 and 1. An operator account can access all APIs with security level 0, 1, or 4. An admin account can access all APIs except internal APIs.

Access management is based on the URL directory structure and is described in following paragraphs.

## 5. Get Server Parameter Values

**Note:** The access right depends on the URL directory.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/<anonymous>/getparam.cgi? [<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<viewer>/getparam.cgi? [<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<operator>/getparam.cgi? [<parameter>]
[&<parameter>...]

http://<servername>/cgi-bin/<admin>/getparam.cgi? [<parameter>]
[&<parameter>...]
```

Where the *<parameter>* should be *<group>[\_<name>]* or *<group>[.<name>]*. If you do not specify any parameters, all the parameters on the server will be returned. If you specify only *<group>*, the parameters of the related group will be returned.

When querying parameter values, the current parameter values are returned.

A successful control request returns parameter pairs as follows:

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: <length>\r\n
\r\n
<parameter pair>
```

where *<parameter pair>* is

*<parameter>=<value>\r\n*

*[<parameter pair>]*

*<length>* is the actual length of content.

**Example:** Request IP address and its response

Request:

http://192.168.0.123/cgi-bin/admin/getparam.cgi?network\_ipaddress

Response:

HTTP/1.0 200 OK\r\n

Content-Type: text/html\r\n

Content-Length: 33\r\n

\r\n

network.ipaddress=192.168.0.123\r\n

## 6. Set Server Parameter Values

**Note:** The access right depends on the URL directory.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/<anonymous>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/<viewer>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/<operator>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

```
http://<servername>/cgi-bin/<admin>/setparam.cgi? <parameter>=<value>
[&<parameter>=<value>...][&return=<return page>]
```

| PARAMETER                  | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>&lt;parameter&gt;</b>   | A full path like: "videoin_c0_s0_h264_resolution", "videoin_c0_s0_h264_maxframe", etc.                                                                                                                                                                                                                                                                                                                                         |
| <b>&lt;value&gt;</b>       | The assigned <value> to the <parameter>.                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>&lt;return page&gt;</b> | Redirect to the page <return page> after the <parameter> is assigned. The <return page> can be a full URL path or relative path according to the current path. If you omit this parameter, it will redirect to an empty page.<br><br>(Note: The return page can be a general HTML file (.htm, .html). It cannot be a CGI command or have any extra parameters. This parameter must be placed at the end of the parameter list. |

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: <length>\r\n
\r\n
<parameter pair>
```

where <parameter pair> is

```
<parameter>=<value>\r\n
```

[<parameter pair>]

Only the parameters that you set and are readable will be returned.

**Example:** Set the IP address of server to 192.168.0.123:

Request:

[http://myserver/cgi-bin/admin/setparam.cgi?network\\_ipaddress=192.168.0.123](http://myserver/cgi-bin/admin/setparam.cgi?network_ipaddress=192.168.0.123)

Response:

HTTP/1.0 200 OK\r\n

Content-Type: text/html\r\n

Context-Length: 33\r\n

\r\n

network.ipaddress=192.168.0.123\r\n

## 7. Available Parameters on the Server

Valid values:

| VALID VALUES                               | DESCRIPTION                                                                                                              |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| string[<n>]                                | Text strings shorter than 'n' characters. The characters “',<,>,&” are invalid.                                          |
| string[n~m]                                | Text strings longer than 'n' characters and shorter than 'm' characters. The characters “',<,>,&” are invalid.           |
| password[<n>]                              | The same as string but displays “*” instead.                                                                             |
| <integer>                                  | Any single integer number in 32-bits.<br>The range is -2147483648~2147483647.                                            |
| <positive integer>                         | Any single positive integer number in 32-bits.<br>The range is 1~ 4294967295.                                            |
| <m> ~ <n>                                  | Any number between 'm' and 'n'.                                                                                          |
| domain name[<n>]                           | A string limited to a domain name shorter than 'n' characters (eg. www.ibm.com).                                         |
| email address [<n>]                        | A string limited to an email address shorter than 'n' characters (eg. joe@www.ibm.com).                                  |
| <ip address>                               | A string limited to an IP address (eg. 192.168.1.1).                                                                     |
| <mac address>                              | A string limited to contain a MAC address without hyphens or colons.                                                     |
| <boolean>                                  | A boolean value of 1 or 0 represents [Yes or No], [True or False], [Enable or Disable].                                  |
| <value1>,<br><value2>,<br><value3>,<br>... | Enumeration. Only given values are valid.                                                                                |
| blank                                      | A blank string.                                                                                                          |
| everything inside <>                       | A description                                                                                                            |
| integer primary key                        | SQLite data type. A 32-bit signed integer. The value is assigned a unique integer by the server.                         |
| <text>                                     | SQLite data type. The value is a text string, stored using the database encoding (UTF-8, UTF-16BE or UTF-16-LE).         |
| <coordinate>                               | x, y coordinate (eg. 0,0)                                                                                                |
| <window size>                              | window width and height (eg. 800x600)                                                                                    |
| <W,H>                                      | The format for coordinate in 2D.<br>W is the pixel number of width.<br>H is the pixel number of height.<br>EX: (176,144) |

| VALID VALUES  | DESCRIPTION                                                                                                                   |
|---------------|-------------------------------------------------------------------------------------------------------------------------------|
| <WxH>         | The format for resolution.<br>W is the pixel number of width.<br>H is the pixel number of height.<br>Ex: 1920x1080, 2048x1536 |
| available     | The API is listed in product WebAPIs.                                                                                         |
| non-available | The API is not in product WebAPIs.                                                                                            |
| valid         | The API is listed in product WebAPIs, and is functional.                                                                      |
| non-valid     | The API is listed in product WebAPIs, but is malfunction in this status.                                                      |
| <decimal>     | Any decimal number expressed in 32-bits ranging from 1.18e-38~3.40e+38.                                                       |

NOTE: The camera should not be restarted when parameters are changed.

## 7.1 System

Group: **system**

| NAME     | VALUE                              | SECURITY<br>(get/set) | DESCRIPTION                                                                                                     |
|----------|------------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------|
| hostname | string[64]                         | 1/6                   | Host name of server<br>(Network Camera,<br>Wireless Network Camera,<br>Video Server,<br>Wireless Video Server). |
| ledoff   | <boolean>                          | 6/6                   | Turn on (0) or turn off (1) all led indicators.                                                                 |
| date     | <YYYY/MM/DD<br>>,<br>keep,<br>auto | 6/6                   | Current date of system. Set to 'keep' to keep date unchanged. Set to 'auto' to use NTP to synchronize date.     |
| time     | <hh:mm:ss>,<br>keep,<br>auto       | 6/6                   | Current time of the system. Set to 'keep' to keep time unchanged. Set to 'auto' to use NTP to synchronize time. |
| datetime | <MMDDhhmm<br>YYYY.ss>              | 6/6                   | Another current time format of the system.                                                                      |

| vi_i<0~(capability_nvi-1)><br><product dependent> | <boolean>            | 1/7                   | Virtual input<br>0 => Inactive<br>1 => Active<br>(capability_nvi > 0) |

### 7.2.1 Status per Channel

Group: **status\_c<0~(n-1)>** for n channel products

n denotes the value of "capability\_nvideoin"

| NAME          | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                                                                                                         |
|---------------|-----------|-----------------------|---------------------------------------------------------------------------------------------------------------------|
| signal_detect | <boolean> | 1/7                   | Indicates whether the video source is connected or not.<br>* Only available when capability_videoin_type is 0 or 1. |
| signal_type   | ntsc,pal  | 1/7                   | The actual modulation type.<br>* Only available when capability_videoin_type is 0 or 1.                             |

### 7.3 Digital Input Behavior Define

Group: **di\_i<0~(n-1)>** for n is the value of "capability\_ndi" (**capability\_ndi > 0**)

| NAME        | VALUE        | SECURITY<br>(get/set) | DESCRIPTION                                                |
|-------------|--------------|-----------------------|------------------------------------------------------------|
| normalstate | high,<br>low | 1/1                   | Indicates open circuit or closed circuit (inactive status) |

### 7.4 Digital Output Behavior Define

Group: **do\_i<0~(n-1)>** for n is the value of "capability\_ndo" (**capability\_ndo > 0**)

| NAME        | VALUE             | SECURITY<br>(get/set) | DESCRIPTION                                                  |
|-------------|-------------------|-----------------------|--------------------------------------------------------------|
| normalstate | open,<br>grounded | 1/1                   | Indicate open circuit or closed circuit<br>(inactive status) |

## 7.5 Security

### 7.6.10 SIP Port

Subgroup of **network: sip** (capability\_protocol\_sip > 0)

| NAME | VALUE        | SECURITY<br>(get/set) | DESCRIPTION |
|------|--------------|-----------------------|-------------|
| port | 1025 ~ 65535 | 1/6                   | SIP port.   |

### 7.6.11 RTP Port

Subgroup of **network: rtp**

| NAME      | VALUE        | SECURITY<br>(get/set) | DESCRIPTION                 |
|-----------|--------------|-----------------------|-----------------------------|
| videoport | 1025 ~ 65535 | 6/6                   | Video channel port for RTP. |
| audioport | 1025 ~ 65535 | 6/6                   | Audio channel port for RTP. |

| NAME       | VALUE        | SECURITY<br>(get/set) | DESCRIPTION                    |
|------------|--------------|-----------------------|--------------------------------|
| metadaport | 1025 ~ 65535 | 6/6                   | Metadata channel port for RTP. |

### 7.6.12 PPPoE

Subgroup of **network**: **pppoe** (**capability\_protocol\_pppoe** > 0)

| NAME | VALUE        | SECURITY<br>(get/set) | DESCRIPTION              |
|------|--------------|-----------------------|--------------------------|
| user | string[128]  | 6/6                   | PPPoE account user name. |
| pass | password[64] | 7/6                   | PPPoE account password.  |

### 7.6.13 Bonjour

Subgroup of **network**: **service\_bonjour**

| NAME        | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                               |
|-------------|-----------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| enable      | <boolean> | 6/6                   | Enable bonjour service feature.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0312a.      |
| servicename | <string>  | 6/6                   | A friendly name for bonjour service.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0312a. |

### 7.6.14 SFTP server

\* Only available when bit 1 of "capability\_protocol\_ftp\_server" is 1.

Subgroup of **network**: **sftp**

| NAME   | VALUE             | SECURITY<br>(get/set) | DESCRIPTION             |
|--------|-------------------|-----------------------|-------------------------|
| port   | 22,<br>1025~65535 | 6/6                   | Local sftp server port. |
| enable | <boolean>         | 6/6                   | Enable sftp.            |

## 7.7 IP Filter

Group: **ipfilter**

| NAME            | VALUE                                                                                                                             | SECURITY<br>(get/set) | DESCRIPTION                                  |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------|-----------------------|----------------------------------------------|

### 7.27.6 Capability for Video Input

Group: **capability\_videoin\_c<0~(n-1)>** n denotes the value of "capability\_nvideoin"

| PARAMETER | VALUE                                                                       | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|-----------------------------------------------------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| lens_type | fisheye, fixed, varifocal, changeable, motor, ics, -<br><product dependent> | 0/7                   | The lens type of this channel.<br><b>"fisheye"</b> : Fisheye lens<br><b>"fixed"</b> : Build-in fixed-focus lens.<br><b>"varifocal"</b> : Build-in varifocal lens.<br><b>"changeable"</b> : changeable lens. Like box-type camera, users can install any C-Mount or CS-Mount lens as they wish.<br><b>"motor"</b> : Lens with motor to support zoom, focus, etc.<br><b>"ics"</b> : An i-CS lens is an intelligent CS-mount lens that contains information about, among other things, its own geometrical distortion and the exact position of its zoom, focus, and iris opening.<br><b>"-"</b> : N/A<br>* Only available when [httpversion] >= 0301a |

| PARAMETER      | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                                                                         |
|----------------|-----------|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| color_support  | <boolean> | 0/7                   | 1 : camera can select to display color or black/white video streams.<br>0: camera do not support this feature.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0310a. |
| eptz_zoomratio | <string>  | 0/7                   | Indicate the support zoom ratio of eptz.<br>"-": not support ePTZ<br>* We support this parameter when the version number (httpversion) is equal or greater than 0310a.                                              |
| rotation       | <boolean> | 0/7                   | Indicate current mode whether support video rotation                                                                                                                                                                |

| PARAMETER      | VALUE                       | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------|-----------------------------|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| rotationaffect | -<br><product<br>dependent> | 0/7                   | <p>When rotation is enabled, some features may become malfunction or be forced to a given value. The affected functions are list here.</p> <p>The format is "Affect API name":"Policy":"Description"</p> <p>"Policy" can be categorized into following groups:</p> <ul style="list-style-type: none"> <li>- (disabled) : UI turns grey and users can't select it.</li> <li>- (unchanged) : UI keeps the status as before and user can't change it.</li> <li>- (hidden) : UI is hidden.</li> <li>- (fixed) : UI is fixed to one selection or value.</li> <li>- (ranged) : UI is fixed to multiple selections or values.</li> <li>- (enabled) : UI is checked.</li> <li>- (notsupport) : the affected function is not available.</li> </ul> <p>"Affect API name" can be described in hierarchy, such as "exposurewin.mode.blc:disabled:" which means blc exposure window is disabled. API name can be one word as well, such as "exposurelevel:fixed:6" which means exposurelevel is fixed to level 6.</p> <p>"Description" can be a nonnegative integer or string or NULL.</p> <p>"-" means no feature is affected.</p> <p>* When "rotation"=0, this value must be "-"</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0304b.</p> |

| PARAMETER     | VALUE                                       | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                                                                                                                                      |
|---------------|---------------------------------------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| rotationangle | <string>                                    | 0/7                   | The different angles which camera supports for rotation.<br>* Only available when "capability_videoin_c<0~(n-1)>_rotation" is 1.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0309b.                                            |
| orientation   | flip,mirror,rotation<br><product dependent> | 0/7                   | Indicates the camera supports flip, mirror or rotation.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0309b.                                                                                                                     |
| streamcodec   | <positive integer>                          | 0/7                   | Represent supported codec types of each stream.<br>This contains a list of positive integers, split by comma. Each one stands for a stream, and the definition is as following:<br>Bit 0: Support MPEG4.<br>Bit 1: Support MJPEG<br>Bit 2: Support H.264<br>Bit 3: Support H.265 |
| mode          | 0,<positive integer>                        | 0/7                   | Indicate current video mode.                                                                                                                                                                                                                                                     |

| panorama_pancontrol | <Boolean>       | 0/7                   | Indicate whether to support localdewarp panorama pan control.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0312b. |

## 7.27.8 Capability for Video Mode

Group: **capability\_videoin\_c<0~(n-1)>\_mode<0~(m-1)>** n denotes the value of

"capability\_nvideoin", m denotes the value of "capability\_videoin\_c<0~(n-1)>\_nmode"

| PARAMETER | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                                       |
|-----------|-----------|-----------------------|---------------------------------------------------|
| rotation  | <boolean> | 0/7                   | Indicate this mode whether support video rotation |

| PARAMETER      | VALUE                 | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------|-----------------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| eptz           | 0, <positive integer> | 0/7                   | <p>Indicate this mode whether support eptz.</p> <p>For "nvideoin" = 1, the definition is as following:<br/>A 32-bits integer, each bit can be set separately as follows:<br/>Bit 0 =&gt; 1st stream supports ePTZ or not.<br/>Bit 1 =&gt; 2nd stream supports ePTZ or not, and so on.</p> <p>For nvideoin &gt;= 2, the definition is different:<br/>First all 32 bits are divided into groups for channel.<br/>Ex:<br/>nvideoin = 2, bit 0~15 are the 1st group for 1st channel, bit 16~31 are the 2nd group for 2nd channel.<br/>nvideoin = 3, bit 0~9 are the 1st group for 1st channel, bit 10~19 are the 2nd group for 2nd channel, bit 20~31 are the 3rd group for 3rd channel.<br/>Then, the 1st bit of the group indicates 1st stream of a channel support ePTZ or not. The 2nd bit of the group indicates 2nd stream of a channel support ePTZ or not, and so on.</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0304b.</p> |
| wdrpro         | 0, 1, 2               | 0/7                   | <p>Indicate this mode whether support WDR pro.</p> <p>0: Non-support WDR Pro<br/>1: Support WDR Pro<br/>2: Support WDR Pro and WDR Pro II</p> <p>* We support this parameter when the version number (httpversion) is equal or greater than 0304b.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| effectivepixel | <WxH>                 | 0/7                   | <p>The visible area of full scene in this video mode.</p> <p>The unit is pixel in source.</p> <p>* If "effectivepixel"&lt;"capability_videoin_c&lt;0~(n-1)&gt;_maxsize", then the visible area is located at the center of full scene.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| palette_support  | <boolean>                 | 0/7                   | Indicate support color palettes or not. Thermal cameras provide a choice of color palettes on the camera, that help quickly distinguish thermal variations and patterns in an image. The color tones correspond to the apparent surface temperatures of the target.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0310a. |
| palette_mode     | A list of palette options | 0/7                   | Palette options used in thermal surveillance.<br>*Only available when "capability_image_c<0~(n-1)>_palette_support"=1.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0310a.                                                                                                                                              |

### 7.27.10 Capability for Peripheral Device

Group: **capability\_peripheral\_c<0~(n-1)>** n denotes the value of "capability\_nvideoin"

| PARAMETER     | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                     |
|---------------|-----------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| devicecontrol | <boolean> | 0/7                   | Indicate whether to support the peripheral device control.<br>* We support this parameter when the version number (httpversion) is equal or greater than 0305c. |

## 7.28 Event Setting

Group: **event\_i<0~(n-1)>** n denotes the value of "capability\_nevent"

(capability\_nevent > 0)

| PARAMETER     | VALUE                                                                                                                                              | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| resource_free_storage  | 0,<positive integer> | 6/7                   | Indicate current free storage size for uploading VADP modules.                                                                                                                      |
| module_number          | 0,<positive integer> | 6/7                   | Record the total module number that already stored in the system.                                                                                                                   |
| module_order           | string[40]           | 6/6                   | The execution order of the enabled modules.                                                                                                                                         |
| module_save2sd         | <boolean>            | 6/6                   | Indicate if the module should be saved to SD card when user want to upload it.<br>If the value is false, save module to the internal storage space and it will occupy storage size. |
| number                 | string[128]          | 6/7                   | This number is used to register license key for VADP application.                                                                                                                   |
| status                 | string[40]           | 6/7                   | Indicate the hardware restore status                                                                                                                                                |
| developer_mode         | <Boolean>            | 6/6                   | Developer mode provide ways to establish communication between the developer of VADP vendor and your camera.<br>* Only available when capability_securecam_support=1.               |

### 7.38.1. VADP Settings for Each Hyperlink

Group: **vadp\_hyperlink\_i<0~(n-1)>**

Maximum of n=10 hyperlink is supported.

| NAME      | VALUE                | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                       |
|-----------|----------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| moduleidx | 0,<positive integer> | 1/7                   | Refer to the package index.                                                                                                       |
| title     | string[40]           | 1/7                   | Name of the vadp hyperlink.                                                                                                       |
| url       | string[120]          | 1/7                   | The URL address of vadp hyperlink.                                                                                                |
| status    | string[40]           | 1/7                   | Value of "on" indicates a valid connection of vadp hyperlink.<br>Value of "off" indicates a invalid connection of vadp hyperlink. |

### 7.38.2. VADP Settings for Each Package

Group: **vadp\_module\_i<0~(n-1)>** for n VADP package number (**capability\_vadp\_npackage > 0**)  
n denotes the value of "capability\_vadp\_npackage".

| NAME         | VALUE       | SECURITY<br>(get/set) | DESCRIPTION                                                                                                               |
|--------------|-------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------|
| enable       | <boolean>   | 6/6                   | Indicate if the module is enabled or not.<br>If yes, also add the index of this module to the module_order.               |
| name         | string[40]  | 6/6                   | Module name                                                                                                               |
| extendedname | string[40]  | 6/6                   | Extended module name. If this value is not blank, it will be shown on the VADP UI first instead of vadp_module_i<n>_name. |
| url          | string[120] | 6/6                   | Define the URL string after the IP address if the module provides it own web page.                                        |
| vendor       | string[40]  | 6/6                   | The provider of the module.                                                                                               |
| vendorurl    | string[120] | 6/6                   | URL of the vendor.                                                                                                        |
| version      | string[40]  | 6/6                   | Version of the module.                                                                                                    |
| license      | string[40]  | 6/6                   | Indicate the license status of the module.                                                                                |
| licmsg       | string[128] | 6/6                   | Indicate the message that will be show on license status when mouse over.                                                 |
| path         | string[40]  | 6/6                   | Record the storage path of the module.                                                                                    |

| NAME           | VALUE       | SECURITY<br>(get/set) | DESCRIPTION                                                                   |
|----------------|-------------|-----------------------|-------------------------------------------------------------------------------|
| initscr        | string[40]  | 6/6                   | The script that will handle operation commands from the system.               |
| status         | string[40]  | 6/6                   | Indicate the running status of the module.                                    |
| statmsg        | string[128] | 6/6                   | Indicate the message that will be show on the running status when mouse over. |
| vvtklicensemec | string[40]  | 6/7                   | Indicate the module use VIVOTEK license mechanism                             |

### 7.38.3. VADP Schedule Settings

Group: **vadp\_schedule\_i<0~(n-1)>** for n VADP package number

n denotes the value of "capability\_vadp\_npackage".

(Only available when "capability\_vadp\_npackage" > 0 and the version number of "vadp\_version" >= "1.3.2.0")

| NAME      | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                                                                      |
|-----------|-----------|-----------------------|----------------------------------------------------------------------------------|
| enable    | <boolean> | 6/6                   | Enable or disable the schedule mode to control the execution of the VADP package |
| begintime | hh:mm     | 6/6                   | Begin time of the schedule                                                       |
| endtime   | hh:mm     | 6/6                   | End time of the schedule                                                         |

### 7.38.4. VADP Event Settings

Group: **vadp\_event**

| NAME                         | VALUE                | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                       |
|------------------------------|----------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| ntrigger                     | 0,<positive integer> | 6/7                   | Indicate the number of topics to be transferred to event manager for trigger.                                                     |
| triggerlist_i<0~(n-1)>_topic | string[256]          | 6/6                   | Indicate the event notification with this topic will be transferred to event manager as trigger.<br>n is equal to ntrigger above. |

## 7.39 Camera PTZ Control

Group: **camctrl** (**capability\_camctrl\_ptztunnel > 0**)

| NAME            | VALUE     | SECURITY<br>(get/set) | DESCRIPTION                           |
|-----------------|-----------|-----------------------|---------------------------------------|
| enableptztunnel | <boolean> | 1/4                   | Enable PTZ tunnel for camera control. |

Group: **camctrl\_c<0~(n-1)>** for n channel products (**capability\_ptzenabled > 0**)

n denotes the value of "capability\_nvideoin" and k denotes the value of "capability\_npreset"

| NAME                       | VALUE                    | SECURITY<br>(get/set) | DESCRIPTION                                                                                                                                 |
|----------------------------|--------------------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| panspeed                   | -5 ~ 5                   | 1/4                   | Pan speed                                                                                                                                   |
| tiltspeed                  | -5 ~ 5                   | 1/4                   | Tilt speed                                                                                                                                  |
| zoomspeed                  | -5 ~ 5                   | 1/4                   | Zoom speed                                                                                                                                  |
| focusspeed                 | -5 ~ 5                   | 1/4                   | Auto focus speed                                                                                                                            |
| patrolseq                  | string[120]              | 1/4                   | (For external device)<br>The indexes of patrol points, separated by “,”                                                                     |
| patroldwelling             | string[160]              | 1/4                   | (For external device)<br>The dwelling time of each patrol point, separated by “,”<br>* only available when<br>capability_camctrl_c0_rs485=2 |
| preset_i<0~(k-1)>_name     | string[40]               | 1/4                   | Name of the preset location.                                                                                                                |

## 7.52 Multicast Settings for Metadata Streaming

Group: **metadata\_c<0~(n-1)>\_s0\_multicast** (**capability\_media\_streamprofiles\_support = 1**)

n denotes the value of "capability\_nvideoin"

| NAME      | VALUE        | SECURITY(<br>get/set) | DESCRIPTION                            |
|-----------|--------------|-----------------------|----------------------------------------|
| ipaddress | <ip address> | 4/4                   | Multicast metadata IP address.         |
| port      | 1025 ~ 65535 | 4/4                   | Multicast metadata port.               |
| ipversion | IPv4, IPv6   | 4/4                   | The version of internet protocol.      |
| ttl       | 1 ~ 255      | 4/4                   | Multicast metadata time to live value. |

## 8. Useful Functions

### 8.1 Drive the Digital Output (**capability\_ndo > 0**)

**Note:** This request requires Viewer privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/setdo.cgi?do1=<value> [&do2=<value>]
[&do3=<value>][&do4=<value>]
```

Where state is 0 or 1; "0" means inactive or normal state, while "1" means active or triggered state, and trigger time is indicated in seconds.

| PARAMETER | VALUE                                                                                                                                                                | DESCRIPTION                                                                                                 |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| do<num>   | state[trigger time]                                                                                                                                                  | Ex: do1=1<br>Setting digital output 1 to trigger state.                                                     |
|           | Where "state" is 0, 1.<br>"0" means inactive or normal state while<br>"1" means active or triggered state.<br>Where "trigger time" is reset time after state change. | Ex: do1=0[30]<br>Setting digital output 1 to normal state, waiting 30 seconds, setting it to trigger state. |

**Example:** Drive the digital output 1 to triggered state, reset do0 after 20 seconds and redirect to an empty page.

[http://myserver/cgi-bin/dido/setdo.cgi?do1=1\[20\]](http://myserver/cgi-bin/dido/setdo.cgi?do1=1[20])

### 8.2 Query Status of the Digital Input (**capability\_ndi > 0**)

**Note:** This request requires Viewer privileges

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/getdi.cgi?[di0][&di1][&di2][&di3]
```

If no parameter is specified, all of the digital input statuses will be returned.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <length>\r\n
\r\n
[di0=<state>]\r\n
[di1=<state>]\r\n
[di2=<state>]\r\n
[di3=<state>]\r\n
```

where <state> can be 0 or 1.

**Example:** Query the status of digital input 1 .

Request:

<http://myserver/cgi-bin/dido/getdi.cgi?di1>

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: 7\r\n
\r\n
di1=1\r\n
```

## 8.3 Query Status of the Digital Output (**capability\_ndo > 0**)

**Note:** This request requires Viewer privileges

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/dido/getdo.cgi?[do0][&do1][&do2][&do3]
```

If no parameter is specified, all the digital output statuses will be returned.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <length>\r\n
\r\n
[do0=<state>]\r\n
```

```
[do1=<state>]\r\n
[do2=<state>]\r\n
[do3=<state>]\r\n
```

where <state> can be 0 or 1.

**Example:** Query the status of digital output 1.

Request:

<http://myserver/cgi-bin/dido/getdo.cgi?do1>

Response:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: 7\r\n
\r\n
do1=1\r\n
```

## 8.4 Capture Single Snapshot

**Note:** This request requires Normal User privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/video.jpg?[channel=<value>][&resolution=<value>]
[&quality=<value>][&streamid=<value>]
```

If the request contains invalid parameters, a full FOV snapshot will return.

| PARAMETER  | VALUE                                                                                                                                                                                                                      | DESCRIPTION                                                                                                      |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| channel    | 0~(capability_nvideoin -1)                                                                                                                                                                                                 | The channel number of the video source.<br><br>Default: 0                                                        |
| resolution | Available options are list in "capability_videoin_c<0~(n-1)>_resolution".<br><br>Besides, available options is referred to "capability_videoin_c<0~(n-1)>_maxresolution" and "capability_videoin_c<0~(n-1)>_minresolution" | The resolution of the image.<br><br>Default: Returns snapshot of current resolution by [channel] and [streamid]. |

| PARAMETER | VALUE                           | DESCRIPTION                                                                                   |
|-----------|---------------------------------|-----------------------------------------------------------------------------------------------|
| quality   | 1~5                             | The quality of the image.                                                                     |
| streamid  | 0~( capability_nmediastream -1) | The stream number.<br><br>Default: Returns snapshot of maxmum resolution for current channel. |

The server will return the most up-to-date snapshot of the selected channel and stream in JPEG format. The size and quality of the image will be set according to the video settings on the server.

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: image/jpeg\r\n
[Content-Length: <image size>\r\n]
<binary JPEG image data>
```

## 8.5 Account Management

**Note:** This request requires Administrator privileges.

**Method:** POST

Syntax:

```
http://<servername>/cgi-bin/admin/editaccount.cgi?
method=<value>&username=<name>[&userpass=<value>][&privilege=<value>][&return=<return page>]
```

| PARAMETER | VALUE  | DESCRIPTION                                                                                                                                                                                |
|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| method    | add    | Add an account to the server. When using this method, the “username” field is necessary. It will use the default value of other fields if not specified.                                   |
|           | delete | Remove an account from the server. When using this method, the “username” field is necessary, and others are ignored.                                                                      |
|           | edit   | Modify the account password and privilege. When using this method, the “username” field is necessary, and other fields are optional. If not specified, it will keep the original settings. |

| PARAMETER | VALUE         | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|-----------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| username  | <name>        | The name of the user to add, delete, or edit.                                                                                                                                                                                                                                               |
| userpass  | <value>       | The password of the new user to add or that of the old user to modify. The default value is an empty string.                                                                                                                                                                                |
| privilege | view          | The privilege of the user to add or to modify.                                                                                                                                                                                                                                              |
|           | operator      | <b>"view"</b> : Viewer privilege.                                                                                                                                                                                                                                                           |
|           | admin         | <b>"operator"</b> : Operator privilege.<br><b>"admin"</b> : Administrator privilege.                                                                                                                                                                                                        |
| return    | <return page> | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

Note:

1. Rules of password settings is defined by layout\_defaultpassword group.

#### Example:

##### Request:

```
http://myserver/cgi-bin/admin/editaccount.cgi?method=add&username=test&userpass=123&privilege=view
```

##### Response of success:

```
HTTP/1.1 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: 2\r\n
\r\n
```

##### Response of failure:

```
HTTP/1.1 200 OK\r\n
Content-Type: text/html\r\n
Content-Length: <Error Message Length>\r\n
\r\n
<Error Message>
```

#### List of error message:

```
ERROR: Add user fail!
ERROR: Delete user fail!
ERROR: Update user's password fail!
```

ERROR: Update user's privilege fail!

## 8.6 Upgrade Firmware

**Note:** This request requires Administrator privileges.

Method: POST

Syntax:

<http://<servername>/cgi-bin/admin/upgrade.cgi>

Post data:

```
fimage=<file name>[&return=<return page>]\r\n\r\n<multipart encoded form data>
```

Server will accept the file named <file name> to upgrade the firmware and return with <return page> if indicated.

## 8.7ePTZ Camera Control (**capability\_eptz > 0 and**

### **Capability\_fisheye = 0)**

**Note:** This request requires camctrl privileges.

**Method:** GET/POST

Syntax:

<http://<servername>/cgi-bin/camctrl/eCamCtrl.cgi?channel=<value>&stream=<value>>  
 [&move=<value>] – Move home, up, down, left, right  
 [&auto=<value>] – Auto pan, patrol  
 [&zoom=<value>] –Zoom in, out  
 [&zooming=<value>&zs=<value>] –Zoom without stopping, used for joystick  
 [&x=<value>&y=<value>&w=<value>&h=<value>&resolution=<value>] - Zoom in, out on a specific area  
 [&vx=<value>&vy=<value>&vs=<value>] – Shift without stopping, used for joystick  
 [&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] –Click on image  
 (Move the center of image to the coordination (x,y) based on resolution or videosize.)  
 [ [&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>][&speedapp=<value>] ] – Set speeds  
 [&return=<return page>]

Example:

<http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&move=right>  
<http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&vx=2&vy=2&vz=2>  
<http://myserver/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=1&x=100&y=100&videosize=640x480&resolution=640x480&stretch=0>

In zoom operation, there are two ways to control it, scale zoom and area zoom.

1. [Scale zoom]: contains two control method, relative movement and continuous movement
  - a. relative movement -

If you trigger a relative movement, it will only zoom certain ratio and stop by itself.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=tele>  
<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=wide>

The zoom ratio to move by relative movement is according to the setting of speedzoom [-5~5].

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&speedzoom=5>

## b. continuous movement -

If you trigger a continuous movement, you have to handle the stop time by yourself.

A continuous movement is convenient to integrate a joystick control.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=tele&zs=1>

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zooming=wide&zs=5>

zooming is used to indicate the moving direction, and zs is used to indicate the speed.

To stop a continuous movement, you have to use the command as below:

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?stream=0&zoom=stop&zs=0>

2. [Area zoom]: it means to zoom in on a specific area, here is an example for a directly moving

[x, y] is the desired coordinate, and it will be the center after movement

[w, h] is the scaled area size

[resolution] is the base range of this coordinate system

The example shows [w, h] = [864, 488], which means to zoom in to ratio x2.2 based on [1920x1080].

Pay attention to that [x, y, w, h] are essential parameters in an area zoom case, and the stream index is counted from 0 as the first stream.

<http://IPAddr/cgi-bin/camctrl/eCamCtrl.cgi?channel=0&stream=0&x=912&y=297&w=864&h=488&resolution=1920x1080>

| PARAMETER | VALUE        | DESCRIPTION                                                                                     |
|-----------|--------------|-------------------------------------------------------------------------------------------------|
| channel   | <0~(n-1)>    | Channel of video source.                                                                        |
| stream    | <0~(m-1)>    | Stream.                                                                                         |
| move      | home         | Move to home ROI.                                                                               |
|           | up           | Move up.                                                                                        |
|           | down         | Move down.                                                                                      |
|           | left         | Move left.                                                                                      |
|           | right        | Move right.                                                                                     |
| auto      | pan          | Auto pan.                                                                                       |
|           | patrol       | Auto patrol.                                                                                    |
|           | stop         | Stop auto pan/patrol.                                                                           |
| zoom      | wide         | Zoom larger view with current speed.                                                            |
|           | tele         | Zoom further with current speed.                                                                |
| zooming   | wide or tele | Zoom without stopping for larger view or further view with zs speed, used for joystick control. |
| zs        | 0 ~ 6        | Set the speed of zooming, "0" means stop.                                                       |
| x         | <integer>    | The desired coordinate, and it will be the center after                                         |

| PARAMETER  | VALUE         | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| y          | <integer>     | movement                                                                                                                                                                                                                                                                                    |
| w          | <integer>     | The scaled area size                                                                                                                                                                                                                                                                        |
| h          | <integer>     |                                                                                                                                                                                                                                                                                             |
| resolution | <window size> | The resolution of streaming.                                                                                                                                                                                                                                                                |
| vx         | <integer>     | The direction of movement, used for joystick control.                                                                                                                                                                                                                                       |
| vy         | <integer>     |                                                                                                                                                                                                                                                                                             |
| vs         | 0 ~ 7         | Set the speed of movement, "0" means stop.                                                                                                                                                                                                                                                  |
| x          | <integer>     | x-coordinate clicked by user.<br>It will be the x-coordinate of center after movement.                                                                                                                                                                                                      |
| y          | <integer>     | y-coordinate clicked by user.<br>It will be the y-coordinate of center after movement.                                                                                                                                                                                                      |
| videosize  | <window size> | The size of plug-in (ActiveX)window in web page                                                                                                                                                                                                                                             |
| resolution | <window size> | The resolution of streaming.                                                                                                                                                                                                                                                                |
| stretch    | <boolean>     | 0 indicates that it uses <b>resolution</b> (streaming size) as the range of the coordinate system.<br>1 indicates that it uses <b>videosize</b> (plug-in size) as the range of the coordinate system.                                                                                       |
| speedpan   | -5 ~ 5        | Set the pan speed.                                                                                                                                                                                                                                                                          |
| speedtilt  | -5 ~ 5        | Set the tilt speed.                                                                                                                                                                                                                                                                         |
| speedzoom  | -5 ~ 5        | Set the zoom speed.                                                                                                                                                                                                                                                                         |
| speedapp   | 1 ~ 5         | Set the auto pan/patrol speed.                                                                                                                                                                                                                                                              |
| return     | <return page> | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

## 8.8ePTZ Recall (**capability\_eptz > 0 and capability\_fisheye = 0**)

**Note:** This request requires camctrl privileges.

**Method:** GET/POST

**Syntax:**

http://<servername>/cgi-bin/camctrl/eRecall.cgi?channel=<value>&stream=<value>&recall=<value>[&return=<return page>]

| PARAMETER | VALUE                               | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|-----------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| channel   | <0~(n-1)>                           | Channel of the video source.                                                                                                                                                                                                                                                                |
| stream    | <0~(m-1)>                           | Stream.                                                                                                                                                                                                                                                                                     |
| recall    | Text string less than 40 characters | One of the present positions to recall.                                                                                                                                                                                                                                                     |
| return    | <return page>                       | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

## 8.9ePTZ Preset Locations (**capability\_eptz > 0 and capability\_fisheye = 0**)

**Note:** This request requires Operator privileges.

**Method:** GET/POST

**Syntax:**

http://<servername>/cgi-bin/operator/ePreset.cgi?channel=<value>&stream=<value>[&addpos=<value>][&delpos=<value>][&return=<return page>]

| PARAMETER | VALUE     | DESCRIPTION                  |
|-----------|-----------|------------------------------|
| channel   | <0~(n-1)> | Channel of the video source. |
| stream    | <0~(m-1)> | Stream.                      |

| PARAMETER | VALUE                                 | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|-----------|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| addpos    | <Text string less than 40 characters> | Add one preset location to the preset list.                                                                                                                                                                                                                                                 |
| delpos    | <Text string less than 40 characters> | Delete preset location from the preset list.                                                                                                                                                                                                                                                |
| return    | <return page>                         | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

## 8.10 IP Filtering for ONVIF

Syntax: <product dependent>

```
http://<servername>/cgi-bin/admin/ipfilter.cgi?type[=<value>]
http://<servername>/cgi-bin/admin/ipfilter.cgi?method=add<v4/v6>&ip=<ipaddress>[&index=<value>][&return=<return page>]
http://<servername>/cgi-bin/admin/ipfilter.cgi?method=del<v4/v6>&index=<value>[&return=<return page>]
```

| PARAMETER | VALUE        | DESCRIPTION                                                                                                                        |
|-----------|--------------|------------------------------------------------------------------------------------------------------------------------------------|
| type      | NULL         | Get IP filter type                                                                                                                 |
|           | allow, deny  | Set IP filter type                                                                                                                 |
| method    | addv4        | Add IPv4 address into access list.                                                                                                 |
|           | addv6        | Add IPv6 address into access list.                                                                                                 |
|           | delv4        | Delete IPv4 address from access list.                                                                                              |
|           | delv6        | Delete IPv6 address from access list.                                                                                              |
| ip        | <IP address> | Single address: <IP address><br>Network address: <IP address / network mask><br>Range address: <start IP address - end IP address> |
| index     | <value>      | The start position to add or to delete.                                                                                            |

## 8.11 UART HTTP Tunnel Channel (**capability\_nuart > 0**)

**Note:** This request requires Operator privileges.

**Method:** GET and POST

Syntax:

```
http://<servername>/cgi-bin/operator/uartchannel.cgi?[channel=<value>]
```

```
-----  
GET /cgi-bin/operator/uartchannel.cgi?[channel=<value>]
```

```
x-sessioncookie: string[22]
```

```
accept: application/x-vvbk-tunnelled
```

```
pragma: no-cache
```

```
cache-control: no-cache  
-----
```

```
POST /cgi-bin/operator/uartchannel.cgi
```

```
x-sessioncookie: string[22]
```

```
content-type: application/x-vvbk-tunnelled
```

```
pragma : no-cache
```

```
cache-control : no-cache
```

```
content-length: 32767
```

```
expires: Sun, 9 Jan 1972 00:00:00 GMT
```

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through a proxy server.

This channel will help to transfer the raw data of UART over the network.

Please see UART tunnel spec for detail information

| PARAMETER | VALUE     | DESCRIPTION                 |
|-----------|-----------|-----------------------------|
| channel   | 0 ~ (n-1) | The channel number of UART. |

## 8.12 Event/Control HTTP Tunnel Channel

**(capability\_evctrlchannel > 0)**

**Note:** This request requires **Administrator** privileges.

**Method:** GET and POST

Syntax:

```
http://<servername>/cgi-bin/admin/ctrlvent.cgi
```

```

-----
GET /cgi-bin/admin/ctrlevent.cgi
x-sessioncookie: string[22]
accept: application/x-vvtk-tunnelled
pragma: no-cache
cache-control: no-cache
-----

POST /cgi-bin/admin/ ctrlevent.cgi
x-sessioncookie: string[22]
content-type: application/x-vvtk-tunnelled
pragma : no-cache
cache-control : no-cache
content-length: 32767
expires: Sun, 9 Jan 1972 00:00:00 GMT

```

User must use GET and POST to establish two channels for downstream and upstream. The x-sessioncookie in GET and POST should be the same to be recognized as a pair for one session. The contents of upstream should be base64 encoded to be able to pass through the proxy server.

This channel will help perform real-time event subscription and notification as well as camera control more efficiently. The event and control formats are described in another document.

See Event/control tunnel spec for detail information

## 8.13 Get SDP of Streams

**Note:** This request requires Viewer access privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/<network_rtsp_s<0~(n*m)-1>_accessname>
```

n denotes the value of "capability\_nvideoin", m denotes the value of "capability\_nmediastream".

Example:

For m=2, the values are shown as

network\_rtsp\_s0\_accessname = live1s1.sdp

network\_rtsp\_s1\_accessname = live1s2.sdp

```
network_rtsp_s2_accessname = live2s1.sdp
network_rtsp_s3_accessname = live2s2.sdp
etc.
```

\* Note: RTSP access name format is modified to “live<n>s<m>.sdp” after version number(httpversion) is 0311c.

Please refer to the “subgroup of network: rtsp” for setting the accessname of SDP.

You can get the SDP by HTTP GET.

When using scalable multicast, Get SDP file which contains the multicast information via HTTP.

## 8.14 Open the Network Stream

**Note:** This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

```
http://<servername>/<network_http_s<0~m-1>_accessname>
```

For RTSP (MP4), the user needs to input the URL below into an RTSP compatible player.

```
rtsp://<servername>/<network_rtsp_s<0~m-1>_accessname>
```

“m” is the stream number.

For details on streaming protocol, please refer to the “control signaling” and “data format” documents.

## 8.15 Send Data (**capability\_nuart > 0**)

**Note:** This request requires Viewer privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/viewer/senddata.cgi?
[com=<value>][&data=<value>][&flush=<value>] [&wait=<value>] [&read=<value>]
```

| PARAMETER | VALUE                      | DESCRIPTION                       |
|-----------|----------------------------|-----------------------------------|
| com       | 1 ~ <max. com port number> | The target COM/RS485 port number. |

|       |                                         |                                                                                                                        |
|-------|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| data  | <hex decimal data>[,<hex decimal data>] | The <hex decimal data> is a series of digits from 0 ~ 9, A ~ F. Each comma separates the commands by 200 milliseconds. |
| flush | yes,no                                  | yes: Receive data buffer of the COM port will be cleared before read.<br>no: Do not clear the receive data buffer.     |
| wait  | 1 ~ 65535                               | Wait time in milliseconds before read data.                                                                            |
| read  | 1 ~ 128                                 | The data length in bytes to read. The read data will be in the return page.                                            |

Return:

```
HTTP/1.0 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <system information length>\r\n
\r\n
<hex decimal data>\r\n
```

Where hexadecimal data is digits from 0 ~ 9, A ~ F.

## 8.16 Storage Managements (**capability\_storage\_dbenabled > 0**)

**Method:** GET and POST

**Note:** This request requires **administrator** privileges.

In the past time, all the recorded files could be searched/updated/deleted independently. However, this implementation provides no abstraction of recorded video clips, and which is not easy to use. Thus edge storage API try to provide a higher abstraction of these video clips.

Ability to change database content from lsctrl.cgi was removed, lsctrl.cgi is changed to read-only.

**PLEASE REFER TO EDGE STORAGE API**

Syntax:

```
http://<servername>/cgi-bin/admin/lsctrl.cgi?cmd=<cmd_type>[&<parameter>=<value>...]
```

The commands usage and their input arguments are as follows.

| PARAMETER | VALUE    | DESCRIPTION                                                                           |
|-----------|----------|---------------------------------------------------------------------------------------|
| cmd_type  | <string> | Required.<br>Command to be executed, including <i>search</i> and <i>queryStatus</i> . |

Command: **search**

| PARAMETER   | VALUE                 | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| label       | <integer primary key> | Optional.<br>The integer primary key column will automatically be assigned a unique integer.                                                                                                                                                                                                                                                                                                                                                                        |
| triggerType | <text>                | Optional.<br>Indicate the event trigger type.<br>Please embrace your input value with single quotes.<br>Ex. triggerType='vi'                                                                                                                                                                                                                                                                                                                                        |
| mediaType   | <text>                | Optional.<br>Indicate the file media type.<br>Ex. mediaType=videoclip<br>* logical "OR" is not supported for this parameter.                                                                                                                                                                                                                                                                                                                                        |
| destPath    | <text>                | Optional.<br>Indicate the file location in camera.<br>Please embrace your input value with single quotes.<br>Ex. destPath ='/mnt/auto/CF/NCMF/abc.mp4'                                                                                                                                                                                                                                                                                                              |
| resolution  | <text>                | Optional.<br>Indicate the media file resolution.<br>Please embrace your input value with single quotes.<br>Ex. resolution='800x600'                                                                                                                                                                                                                                                                                                                                 |
| isLocked    | <boolean>             | Optional.<br>Indicate if the file is locked or not.<br>0: file is not locked.<br>1: file is locked.<br>A locked file would not be removed from UI or cyclic storage.                                                                                                                                                                                                                                                                                                |
| triggerTime | <text>                | Optional.<br>Indicate the event trigger time. (not the file created time)<br>Format is "YYYY-MM-DD HH:MM:SS"<br>Please embrace your input value with single quotes.<br>Ex. triggerTime='2008-01-01 00:00:00'<br>If you want to search for a time period, please apply "TO" operation.<br>Ex. triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59' is to search for records from the start of Jan 1 <sup>st</sup> 2008 to the end of Jan 1 <sup>st</sup> 2008. |

| PARAMETER | VALUE              | DESCRIPTION                                                                                                                                        |
|-----------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| limit     | <positive integer> | Optional.<br>Limit the maximum number of returned search records.                                                                                  |
| offset    | <positive integer> | Optional.<br>Specifies how many rows to skip at the beginning of the matched records.<br>Note that the offset keyword is used after limit keyword. |

To increase the flexibility of search command, you may use “OR” connectors for logical “OR” search operations. Moreover, to search for a specific time period, you can use “TO” connector.

Ex. To search records triggered by motion or di or sequential and also triggered between 2008-01-01 00:00:00 and 2008-01-01 23:59:59.

```
http://<servername>/cgi-bin/admin/lscrl.cgi?cmd=search&triggerType='motion'+OR+'di'+OR+'seq'
&triggerTime='2008-01-01 00:00:00'+TO+'2008-01-01 23:59:59'
```

Command: queryStatus

| PARAMETER | VALUE             | DESCRIPTION                                                                        |
|-----------|-------------------|------------------------------------------------------------------------------------|
| retType   | xml or javascript | Optional.<br>Ex. retype=javascript<br>The default return message is in XML format. |

Ex. Query local storage status and call for javascript format return message.

```
http://<servername>/cgi-bin/admin/lscrl.cgi?cmd=queryStatus&retType=javascript
```

## 8.17 Virtual Input (**capability\_nvi > 0**)

**Note:** Change virtual input (manual trigger) status.

Method: GET

Syntax:

```
http://<servername>/cgi-bin/admin/setvi.cgi?vi0=<value>[&vi1=<value>][&vi2=<value>]
[&return=<return page>]
```

| PARAMETER | VALUE                                                                             | DESCRIPTION                                           |
|-----------|-----------------------------------------------------------------------------------|-------------------------------------------------------|
| vi<num>   | state[(duration)nstate]<br>Where "state" is 0, 1. "0"<br>means inactive or normal | Ex: vi0=1<br>Setting virtual input 0 to trigger state |

| PARAMETER | VALUE                                                                                         | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|-----------|-----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | state while "1" means active or triggered state. Where "nstate" is next state after duration. | Ex: vi0=0(200)1<br>Setting virtual input 0 to normal state, waiting 200 <b>milliseconds</b> , setting it to trigger state.<br>Note that when the virtual input is waiting for next state, it cannot accept new requests.                                                                    |
| return    | <return page>                                                                                 | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

| Return Code | Description                                                                                                                                                                                                                               |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 200         | The request is successfully executed.                                                                                                                                                                                                     |
| 400         | The request cannot be assigned, ex. incorrect parameters.<br>Examples:<br>setvi.cgi?vi0=0(10000)1(15000)0(20000)1<br>No multiple duration.<br>setvi.cgi?vi3=0<br>VI index is out of range.<br>setvi.cgi?vi=1<br>No VI index is specified. |
| 503         | The resource is unavailable, ex. Virtual input is waiting for next state.<br>Examples:<br>setvi.cgi?vi0=0(15000)1<br>setvi.cgi?vi0=1<br>Request 2 will not be accepted during the execution time(15 seconds).                             |

## 8.18 Open Timeshift Stream (**capability\_timeshift > 0, timeshift\_enable=1, timeshift\_c<n>\_s<m>\_allow=1**)

**Note:** This request requires Viewer access privileges.

Syntax:

For HTTP push server (MJPEG):

```
http://<servername>/<network_http_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<value>&forcechk&minsft=<value>]
```

For RTSP (MP4 and H264), the user needs to input the URL below into an RTSP compatible player.

```
rtsp://<servername>/<network_rtsp_s<m>_accessname>?maxsft=<value>[&tsmode=<value>&reftime=<value>&forcechk&minsft=<value>]
```

“n” is the channel index.

“m” is the timeshift stream index.

For details on timeshift stream, please refer to the “TimeshiftCaching” documents.

| PARAMETER | VALUE               | DEFAULT                               | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|---------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| maxsft    | <positive integer>  | 0                                     | Request cached stream at most how many seconds ago.<br>The value must be a positive integer. (>0)                                                                                                                                                                                                                                                                                                                             |
| tsmode    | normal,<br>adaptive | normal                                | Streaming mode:<br>normal => Full FPS all the time.<br>adaptive => Default send only I-frame for MP4 and H.264, and send 1 FPS for MJPEG. If DI or motion window are triggered, the streaming is changed to send full FPS for 10 seconds.<br>(*Note: this parameter also works on non-timeshift streams.)<br><b>tsmode</b> must exactly match well-defined wording (normal, adaptive), unknown parameters are always ignored. |
| reftime   | mm:ss               | The time camera receives the request. | Reference time for maxsft and minsft.<br>(This provides more precise time control to eliminate the inaccuracy due to network latency.)<br>Ex: Request the streaming from 12:20<br>rtsp://10.0.0.1/live.sdp?maxsft=10&reftime=12:30                                                                                                                                                                                            |
| forcechk  | N/A                 | N/A                                   | Check if the requested stream enables timeshift, feature and if minsft is achievable.<br>If false, return “415 Unsupported Media Type”.                                                                                                                                                                                                                                                                                       |
| minsft    | <positive integer>  | 0                                     | How many seconds of cached stream client can accept at least.<br>(Used by forcechk)<br>The value must be a positive integer. (>0)                                                                                                                                                                                                                                                                                             |

| Return Code                | Description                                                                                                                |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------|
| 400 Bad Request            | Request is rejected because some parameter values are illegal.                                                             |
| 415 Unsupported Media Type | Returned, if forcechk appears, when minsft is not achievable or the timeshift feature of the target stream is not enabled. |

## 8.19 RemoteFocus

**(capability\_image\_c<0~(n-1)>\_remotefocus=1)**

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax: **(for control API)**

```
http://<servername>/cgi-bin/admin/remotefocus.cgi?channel=<value>&[function=<value>][&direction=<value>][&position=<value>][&steps=<value>][&iris]
```

| PARAMETER | VALUE                                                                                 | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|---------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 8.21 Export Files

**Note:** This request requires Administrator privileges.

Method: GET

Syntax:

For daylight saving time configuration file:

**\* This CGI is not supported when the version number (httpversion) is equal or greater than 0314b, please use "system\_tz" as a replacement.**

`http://<servername>/cgi-bin/admin/exportDst.cgi`

For language file:

`http://<servername>/cgi-bin/admin/export_language.cgi?currentlanguage=<value>`

| PARAMETER | VALUE | DESCRIPTION |
|-----------|-------|-------------|
|-----------|-------|-------------|

|                 |      |                                                                                                      |
|-----------------|------|------------------------------------------------------------------------------------------------------|
| currentlanguage | 0~20 | Available language lists.<br>Please refer to:<br>system_info_language_i0 ~ system_info_language_i19. |
|-----------------|------|------------------------------------------------------------------------------------------------------|

For setting backup file:

```
http://<servername>/cgi-bin/admin/export_backup.cgi?backup
```

## 8.22 Upload Files

**Note:** This request requires Administrator privileges.

Method: POST

Syntax:

For daylight saving time configuration file:

**\* This CGI is not supported when the version number (httpversion) is equal or greater than 0314b, please use "system\_tz" as a replacement.**

```
http://<servername>/cgi-bin/admin/upload_dst.cgi
```

Post data:

```
filename =<file name>\r\n
\r\n
<multipart encoded form data>
```

For language file:

```
http://<servername>/cgi-bin/admin/upload_lan.cgi
```

Post data:

```
filename =<file name>\r\n
\r\n
<multipart encoded form data>
```

For setting backup file:

```
http://<servername>/cgi-bin/admin/upload_backup.cgi
```

Post data:

```
filename =<file name>\r\n
\r\n
<multipart encoded form data>
```

Server will accept the file named <file name> to upload this one to camera.

## 8.23 Update Lens Configuration

**(capability\_image\_c<0~(n-1)>\_lensconfiguration\_support > 0)**

**Note:** This request requires Administrator privileges.

**Method:** GET

Syntax:

For list a name of lens currently used:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?get_currentlens
```

For list all names of lens installed in camera:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?list_lens
```

For choose selected lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?choose_lens=<value>
```

You need to reboot manually after you choose another lens configuration.

For choose selected lens configuration and reboot camera:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?choose_reboot_lens=<value>
```

The camera will reboot after using this cgi.

For delete selected lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?delete_lens=<value>
```

| PARAMETER | VALUE    | DESCRIPTION                                                                                                                       |
|-----------|----------|-----------------------------------------------------------------------------------------------------------------------------------|
| value     | <string> | Available lens name.<br>Please refer to:<br>lens_default_i<0~(n-1)>_name<br>lens_user_i<0~(n-1)>_name<br>n is a positive integer. |

**Method:** POST

Syntax:

For upload user-defined lens configuration:

```
http://<servername>/cgi-bin/admin/update_lens.cgi?upload_lens
```

Post data:

```
upload_lens_profile_input = <file name>\r\n
\r\n
<multipart encoded form data>
```

Server will accept the file named <file name> to upload the lens profile to camera.

## 8.24 Media on Demand (**capability\_localstorage.modnum > 0**)

Media on demand allows users to select and receive/watch/listen to metadata/video/audio contents on demand.

**Note:** This request requires Viewer access privileges.

Syntax:

```
rtsp://<servername>/mod.sdp? [&stime=<value>] [&etime=<value>] [&length=<value>] [&loctime=<value>] [&file=<value>] [&tsmode=<value>]
```

| PARAMETER | VALUE                 | DEFAULT | DESCRIPTION                                                                      |
|-----------|-----------------------|---------|----------------------------------------------------------------------------------|
| stime     | <YYYYMMDD_HHMMSS.MMM> | N/A     | Start time.                                                                      |
| etime     | <YYYYMMDD_HHMMSS.MMM> | N/A     | End time.                                                                        |
| length    | <positive integer>    | N/A     | The length of media of interest.<br>The unit is second.                          |
| loctime   | <boolean>             | 0       | Specify if start/end time is local time format.<br>1 for local time, 0 for UTC+0 |
| file      | <string>              | N/A     | The media file to be played.                                                     |
| tsmode    | <positive integer>    | N/A     | Timeshift mode, the unit is second.                                              |

Ex.

| stime | etime | length | file | Description                                                                                                                |
|-------|-------|--------|------|----------------------------------------------------------------------------------------------------------------------------|
| V     | V     | X      | X    | Play recordings between stime and etime<br>rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&etime=2011_0312_040510.000   |
| V     | X     | V      | X    | Play recordings for length seconds which start from stime<br>rtsp://10.10.1.2/mod.sdp?stime=20110312_040400.000&length=120 |

|          |          |          |          |                                                                                                                         |
|----------|----------|----------|----------|-------------------------------------------------------------------------------------------------------------------------|
| <b>X</b> | <b>V</b> | <b>V</b> | <b>X</b> | Play recordings for length seconds which ends at etime<br>rtsp://10.10.1.2/mod.sdp?etime=20110312_040400.000&length=120 |
| <b>X</b> | <b>X</b> | <b>X</b> | <b>V</b> | Play file file<br>rtsp://10.10.1.2/mod.sdp?filename=/mnt/link0/                                                         |

## 8.25 3D Privacy Mask

**(Capability\_image\_c<0~(n-1)>\_privacymask\_wintype = 3Drectangle)**

n denotes the value of "capability\_nvideoin"

**Note:** This request requires admin user privilege

**Method:** GET/POST

Syntax:

http://<servername>/cgi-bin/admin/setpm3d.cgi?method=<value>&maskname=<value>&[maskheight=<value>&maskwidth=<value>&videosize=<value>&return=<return page>]

| PARAMETER  | VALUE         | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| method     | add           | Add a 3D privacy mask at current location                                                                                                                                                                                                                                                   |
|            | delete        | Delete a 3D privacy mask                                                                                                                                                                                                                                                                    |
|            | edit          | Edit a 3D privacy mask                                                                                                                                                                                                                                                                      |
| maskname   | string[40]    | 3D privacy mask name                                                                                                                                                                                                                                                                        |
| maskheight | integer       | 3D privacy mask height                                                                                                                                                                                                                                                                      |
| maskwidth  | integer       | 3D privacy mask width                                                                                                                                                                                                                                                                       |
| videosize  | <window size> | Optimal.<br>The size of plug-in (ActiveX) window in web page is the size of the privacy window size. This field is not necessary, it will use the default value if not specified.<br>320x180 for 16:9 resolution and 320x240 for 4:3 resolution.                                            |
| return     | <return page> | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

## 8.26 Camera Control

**(capability\_camctrl\_c<0~(n-1)>\_zoommodule = 1)**

**Note:** This request requires Viewer privileges.

**Method:** GET/POST

Syntax: **(for control API)**

http://<servername>/cgi-bin/camctrl/camctrl.cgi?[channel=<value>][&camid=<value>]  
 [&move=<value>] – Move home, up, down, left, right  
 [&focus=<value>] – Focus operation  
 [&zoom=<value>] – Zoom in, out  
 [&zooming=<value>&zs=<value>] – Zoom without stopping, used for joystick  
 [&vx=<value>&vy=<value>&vs=<value>] – Shift without stopping, used for joystick  
 [&x=<value>&y=<value>&videosize=<value>&resolution=<value>&stretch=<value>] – Click on image  
 (Move the center of image to the coordination (x,y) based on resolution or videosize.)  
 [ [&speedpan=<value>][&speedtilt=<value>][&speedzoom=<value>][&speedapp=<value>][&speedl  
 ink=<value>] ] – Set speeds  
 [&return=<return page>]

Example:

<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&move=right>  
<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&zoom=tele>  
<http://myserver/cgi-bin/camctrl/camctrl.cgi?channel=0&camid=1&x=300&y=200&resolution=704x480&videosize=704x480&stretch=1>

Example: (set the ptz preset with focus mode)

\* We support this function when the version number of the PTZ control module is equal or greater than 5.0.0.20.

<http://myserver/cgi-bin/camctrl/camctrl.cgi?name=xxx&focussetting=sync&cam=getsetpreset>

| PARAMETER | VALUE                | DESCRIPTION                      |
|-----------|----------------------|----------------------------------|
| channel   | <0~(n-1)>            | Channel of video source.         |
| camid     | 0,<positive integer> | Camera ID.                       |
| move      | home                 | Move to camera to home position. |
|           | up                   | Move camera up.                  |

| PARAMETER  | VALUE                   | DESCRIPTION                                                                                                                                                                                           |
|------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | down                    | Move camera down.                                                                                                                                                                                     |
|            | left                    | Move camera left.                                                                                                                                                                                     |
|            | right                   | Move camera right.                                                                                                                                                                                    |
| speedpan   | -5 ~ 5                  | Set the pan speed.                                                                                                                                                                                    |
| speedtilt  | -5 ~ 5                  | Set the tilt speed.                                                                                                                                                                                   |
| speedzoom  | -5 ~ 5                  | Set the zoom speed.                                                                                                                                                                                   |
| speedfocus | -5 ~ 5                  | Set the focus speed.                                                                                                                                                                                  |
| speedapp   | -5 ~ 5                  | Set the auto pan/patrol speed.                                                                                                                                                                        |
| auto       | pan                     | Auto pan.                                                                                                                                                                                             |
|            | patrol                  | Auto patrol.                                                                                                                                                                                          |
|            | stop                    | Stop camera.                                                                                                                                                                                          |
| zoom       | wide                    | Zoom larger view with current speed.                                                                                                                                                                  |
|            | tele                    | Zoom further with current speed.                                                                                                                                                                      |
|            | stop                    | Stop zoom.                                                                                                                                                                                            |
| zooming    | wide or tele            | Zoom without stopping for larger view or further view with zs speed, used for joystick control.                                                                                                       |
| zs         | 0 ~ 8 <SD8362>          | Set the speed of zooming, "0" means stop.                                                                                                                                                             |
| vx         | <integer , excluding 0> | The slope of movement = $v_y/v_x$ , used for joystick control.                                                                                                                                        |
| vy         | <integer>               |                                                                                                                                                                                                       |
| vs         | 0 ~ 127                 | Set the speed of movement, "0" means stop.                                                                                                                                                            |
| x          | <integer>               | x-coordinate clicked by user.<br>It will be the x-coordinate of center after movement.                                                                                                                |
| y          | <integer>               | y-coordinate clicked by user.<br>It will be the y-coordinate of center after movement.                                                                                                                |
| videosize  | <window size>           | The size of plug-in (ActiveX) window in web page                                                                                                                                                      |
| resolution | <window size>           | The resolution of streaming.                                                                                                                                                                          |
| stretch    | <boolean>               | 0 indicates that it uses <b>resolution</b> (streaming size) as the range of the coordinate system.<br>1 indicates that it uses <b>videosize</b> (plug-in size) as the range of the coordinate system. |

| PARAMETER    | VALUE                                                                                                           | DESCRIPTION                                                                                                                                                                              |

| getmaxdzoom     | 0, <positive integer> | Get the upper limit for digital zoom position.                                                                                               |
| getmaxratio     | <decimal>             | Get the maximum ratio of optical zoom.<br>* We support this parameter when the version number (getversion) is equal or greater than 5.0.0.14 |
| getmaxdratio    | <decimal>             | Get the maximum ratio of digital zoom.<br>* We support this parameter when the version number (getversion) is equal or greater than 5.0.0.14 |
| getminfocus     | 0, <positive integer> | Get the lower limit for focus position.                                                                                                      |
| getmaxfocus     | 0, <positive integer> | Get the upper limit for focus position.                                                                                                      |

## 8.27 Recall (**capability\_camctrl\_c<0~(n-1)>\_zoommodule = 1**)

**Note:** This request requires Viewer privileges.

**Method:** GET

Syntax:

```
http://<servername>/cgi-bin/viewer/recall.cgi?
recall=<value>[&channel=<value>][&return=<return page>]
```

| PARAMETER | VALUE                     | DESCRIPTION                             |
|-----------|---------------------------|-----------------------------------------|
| recall    | string[30]                | One of the present positions to recall. |
| channel   | 0~"capability_nvideoin"-1 | Channel of the video source.            |

## 8.28 Preset Locations

**(capability\_camctrl\_c<0~(n-1)>\_zoommodule = 1)**

**Note:** This request requires Operator privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/operator/preset.cgi?[channel=<value>]
[&addpos=<value>][&delpos=<value>][&return=<return page>]
```

| PARAMETER | VALUE                     | DESCRIPTION                                                                                                                                                                                                                                                                                 |
|-----------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| addpos    | string[30]                | Add one preset location to the preset list.                                                                                                                                                                                                                                                 |
| channel   | 0~"capability_nvideoin"-1 | Channel of the video source.                                                                                                                                                                                                                                                                |
| delpos    | string[30]                | Delete preset location from preset list.                                                                                                                                                                                                                                                    |
| return    | <return page>             | Redirect to the page <return page> after the parameter is assigned. The <return page> should be the relative path according to the root of camera. If you omit this parameter, it will redirect to an empty page.<br>* If the <return page> is invalid path, it will ignore this parameter. |

## 8.29 SmartSD (capability\_localstorage\_smartsd > 0)

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/smartsd.cgi?function=<value>
```

| PARAMETER | VALUE     | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| function  | getstatus | <p>Function type</p> <p>getstauts : Information of smartSD internal status return value as below:</p> <p><b>smartsd_lifetime_num:</b><br/>Accumulated amount of data that has been written</p> <p><b>smartsd_lifetime_den:</b><br/>Card-guaranteed amount of data that can be written</p> <p><b>smartsd_lifetime_rate:</b><br/>The ratio of smartsd_lifetime_num to smartsd_lifetime_den.</p> <p>It means the accumulated percentage amount of flash block has been written. The range is from 0 to 100 (unit: %). The SD card is recommended to be replaced if the percentage reaches above 90%.</p> <p><b>smartsd_spare_block_rate:</b><br/>Usage rate of spare blocks.</p> <p>It means the usage percentage of total spare block. The range is from 0 to 100 (unit: %). The SD card is recommended to be replaced if the percentage reaches above 90%.</p> <p><b>smartsd_data_size_per_unit:</b><br/>Size (in sectors) of data to be written when Life Information1 is updated.</p> <p><b>smartsd_num_of_sudden_power_failure:</b><br/>Indicates how many times power disconnection occurred during write/erase operations</p> <p><b>smartsd_operation_mode:</b><br/>Enables/disables power-off detection and write error notification</p> <p><b>smartsd_attached:</b><br/>Indicate the smartSD is attached or not.</p> |

## 8.30 Connect to AP (**capability\_network\_wireless > 0**)

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/connect_ap.cgi
```

| PARAMETER | VALUE | DESCRIPTION                                    |
|-----------|-------|------------------------------------------------|
| N/A       | N/A   | Apply the wireless settings and connect to AP. |

## 8.31 Get Wireless Information (**capability\_network\_wireless > 0)**

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/getwirelessinfo.cgi
```

| PARAMETER | VALUE | DESCRIPTION                                                                                                                                                                              |
|-----------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A       | N/A   | Get wireless information. Camera will return following information.<br>1. Wireless channel<br>2. Link quality<br>3. Signal level<br>4. Noise level<br>5. SNR<br>6. TX Rate<br>7. RX Rate |

## 8.32 Get Wireless Signal Strength (**capability\_network\_wireless > 0)**

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/getwlsignalstrength.cgi
```

| PARAMETER | VALUE | DESCRIPTION                   |
|-----------|-------|-------------------------------|
| N/A       | N/A   | Get wireless signal strength. |

### 8.33 WPS Transaction (**capability\_network\_wireless > 0**)

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>/cgi-bin/admin/start_wps.cgi
```

| PARAMETER | VALUE | DESCRIPTION            |
|-----------|-------|------------------------|
| N/A       | N/A   | Start WPS transaction. |

### 8.34 Peripheral Control (**capability\_peripheral\_c<0~(n-1)>\_devicecontrol > 0**)

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax: (**for control API**)

```
http://<servername>/cgi-bin/admin/peripheral.cgi?channel=<value>&operation=set
[&washer_mode=<value>] – Set washer mode
[&washer_status=<value>] – Set washer status
[&washer_dwelltime=<value>] – Set washer clean time
[&heater_status=<value>] – Set heater status
```

Example:

```
http://myserver/cgi-bin/admin/peripheral.cgi?channel=0&operation=set&washer\_mode=wiper&washer\_status=on
```

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
```

```
"washer_mode : OK\r\n"
"washer_status : FAIL\r\n"
```

| PARAMETER        | VALUE                     | DESCRIPTION                                                                                                        |
|------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------|
| channel          | 0~"capability_nvideoin"-1 | Channel of the video source.                                                                                       |
| washer_mode      | wiper                     | Apply the wiper to the mode of washer control system.                                                              |
|                  | washer                    | Apply the washer to the mode of washer control system.                                                             |
| washer_status    | on                        | Enable the functionality of washer control system.                                                                 |
|                  | off                       | Disable the functionality of washer control system.                                                                |
| washer_dwelltime | 15~999                    | Apply washer washer control system operation time (including the time when spraying and wiper actions take place). |
| heater_status    | auto                      | automatic control the heater component to keep the device in a workable environment.                               |
|                  | trigger                   | heater component is work in force heater once.                                                                     |

Syntax: **(for query API)**

```
http://<servername>/cgi-bin/admin/peripheral.cgi?channel=<value>&operation=get
[&supportdevice] –Get support peripheral device
[&washer_supportmode] – Get washer support modes
[&washer_mode] – Get washer mode
[&washer_status] – Get washer status
[&washer_dwelltime] – Get washer clean time
[&heater_supportstatus] – Get heater support control status
[&heater_status] – Get heater status
```

Example:

[http://myserver/cgi-bin/admin/peripheral.cgi?channel=0&operation=get&supportdevice&washer\\_status](http://myserver/cgi-bin/admin/peripheral.cgi?channel=0&operation=get&supportdevice&washer_status)

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
```

```
Pragma: no-cache\r\n
\r\n
supportdevice=washer,heater\r\n
washer_status=off\r\n
```

| PARAMETER            | VALUE                     | DESCRIPTION                                                                                                                                                                                                                                                                                                                                       |
|----------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| channel              | 0~"capability_nvideoin"-1 | Channel of the video source.                                                                                                                                                                                                                                                                                                                      |
| supportdevice        | N/A                       | Get support peripheral device.                                                                                                                                                                                                                                                                                                                    |
| washer_supportmode   | N/A                       | Get the support mode of washer control system.                                                                                                                                                                                                                                                                                                    |
| washer_mode          | N/A                       | Get the current mode of washer control system.<br>It return the value of "washer_mode"                                                                                                                                                                                                                                                            |
| washer_status        | N/A                       | Get the current status of washer control module.<br>The status is 'off' as default, which means the washer is stopped; and the status 'on' means the washer is running.                                                                                                                                                                           |
| washer_dwelltime     | N/A                       | Get the current washer clean period of washer control system.                                                                                                                                                                                                                                                                                     |
| heater_supportstatus | N/A                       | Get the support status of heater control system.                                                                                                                                                                                                                                                                                                  |
| heater_status        | N/A                       | Get the current heater status.<br>Normally it will be 'auto', it means the heater device is control by internal algorithm to keep in a suitable environment; Otherwise is 'trigger', it means the heater device is force enable to heat to an internal condition. 'trigger' status will be transfer to 'auto' after reach the internal condition. |

## 8.35 Optimized IR control

**(capability\_daynight\_c<0~(n-1)>\_optimizedir > 0)**

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax:

[http://<servername>/cgi-bin/admin/optimizedir.cgi?function=<value>\[&channel=<value>\]](http://<servername>/cgi-bin/admin/optimizedir.cgi?function=<value>[&channel=<value>])

| PARAMETER | VALUE                     | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| channel   | 0~"capability_nvideoin"-1 | Channel of the video source.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| function  | getstatus,<br>onetimeauto | <p><b>"onetimeauto"</b>: Camera will automatically adjust the IR zone one time only.</p> <p><b>"getstatus"</b>: Information of optimized IR control status and return value as below:</p> <p><b>optimizedir_c&lt;0~(n-1)&gt;_irmode:</b><br/>Indicate the IR current mode, available value is "auto" and "manual" mode.</p> <p><b>optimizedir_c&lt;0~(n-1)&gt;_irnum:</b><br/>The number of IR that camera supports.</p> <p><b>optimizedir_c&lt;0~(n-1)&gt;_irstrength:</b><br/>Only available when irmode is set as manual. It's a set of integers, which indicate the strength of each IR LED (e.g. 23,45,100,100).</p> <p><b>optimizedir_c&lt;0~(n-1)&gt;_irstatus:</b><br/>Current IR status, normal / adjusting:<br/> <b>"normal"</b>: the IR LED strength has been fixed.<br/> <b>"adjusting"</b>: the IR LED strength is adjusting.</p> <p><b>optimizedir_c&lt;0~(n-1)&gt;_supportmode:</b><br/> <b>"auto"</b>: automatically adjust the IR control.<br/> <b>"manual"</b>: manual adjustment.</p> |

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?function=getstatus>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"optimizedir\_c0\_irmode='auto'"

"optimizedir\_c0\_irnum='5'"

"optimizedir\_c0\_irstrength='1,97,100,100,100'"

"optimizedir\_c0\_irstatus='normal'"

Syntax: **(for control API)**

<http://<servername>/cgi-bin/admin/optimizedir.cgi>?channel=<value>&operation=<value>&irmode=manual[&strength=<value>] – Set IR strength

| PARAMETER | VALUE                     | DESCRIPTION                                                                                                                                                                                |
|-----------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| channel   | 0~"capability_nvideoin"-1 | Channel of the video source.                                                                                                                                                               |
| operation | set,<br>settoall          | <b>"set"</b> : set the strength of each IR LED separately<br><b>"settoall"</b> : use fixed strength for all IR LED                                                                         |
| irmode    | auto,<br>manual           | Irmode needs to be set as manual for adjusting IR LED strength.                                                                                                                            |
| strength  | 1~100                     | If the operation is set as "set", the number of strength values need to be the same as it of irnum. However, it needs only one value for strength when the operation is set as "settoall". |

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=set&irmode=manual&strength=50,70,50,50,50>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"optimizedir\_c0\_irstrength='50,70,50,50,50'"

"optimizedir\_c0\_irmode='manual'"

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=settoall&irmode>manual&strength=100>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
"optimizedir_c0_irstrength='100,100,100,100,100'"
"optimizedir_c0_irmode='manual'"
```

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=set&irmode=auto&strength=50,70,50,50,50>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
ERROR: Parameter "irmode" must be set as "manual"!
```

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=set&strength=50,70,50,50,50>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
ERROR: Must have the "irmode>manual" argument!
```

Syntax: **(for query API)**

<http://<servername>/cgi-bin/admin/optimizedir.cgi?channel=<value>&operation=get>

[&support\_irmode] – list all adjustment mode that IR supports

[&irmode] – Get current IR mode

[&irnum] – Get the number of IR zone

| PARAMETER      | VALUE                     | DESCRIPTION                                |
|----------------|---------------------------|--------------------------------------------|
| channel        | 0~"capability_nvideoin"-1 | Channel of the video source.               |
| support_irmode | N/A                       | List all adjustment mode that IR supports  |
| irmode         | N/A                       | Get the current IR control mode.           |
| irnum          | N/A                       | Get the number of IR that camera supports. |

Example:

<http://myserver/cgi-bin/admin/optimizedir.cgi?channel=0&operation=get&irmode>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

"optimizedir\_c0\_irmode='auto'"

## 8.36 Lens Thermal Control

**(capability\_image\_c<0~(n-1)>\_sensortype=thermalsensor)**

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax: **(for control API)**

<http://<servername>/cgi-bin/admin/thermalctrl.cgi?operation=set>  
[&action=<value>](http://<servername>/cgi-bin/admin/thermalctrl.cgi?operation=set)

Example:

<http://myserver/cgi-bin/admin/thermalctrl.cgi?operation=set&action=shuttercompensate>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

```
\r\n
OK
```

Example:

<http://myserver/cgi-bin/admin/thermalctrl.cgi?operation=set&action=shuttercompensate>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
ERROR: time out
```

Example:

<http://myserver/cgi-bin/admin/thermalctrl.cgi?operation=set&action=shuttercompensate>

Response:

```
HTTP/1.0 200 OK\r\n
Cache-control: no-cache\r\n
Pragma: no-cache\r\n
\r\n
ERROR: fail
```

| PARAMETER | VALUE             | DESCRIPTION                        |
|-----------|-------------------|------------------------------------|
| action    | shuttercompensate | Camera will do shutter compensate. |

Syntax: **(for query API)**

<http://<servername>/cgi-bin/admin/thermalctrl.cgi?operation=get&version=<value>>

| PARAMETER | VALUE | DESCRIPTION                       |
|-----------|-------|-----------------------------------|
| version   | N/A   | Indicate lensctrl thermal version |

Example:

<http://myserver/cgi-bin/admin/thermalctrl.cgi?operation=get&version>

Response:

HTTP/1.0 200 OK\r\n

Cache-control: no-cache\r\n

Pragma: no-cache\r\n

\r\n

version=1120B15

## 8.37 Audio Clip Control (**capability\_audio\_audioclip=1**)

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

**Syntax:** (**for control API**)

[http://<servername>/cgi-bin/admin/audioclip.cgi?operation=<value>\[&name=<value>\]\[&index=<value>\]](http://<servername>/cgi-bin/admin/audioclip.cgi?operation=<value>[&name=<value>][&index=<value>])

| PARAMETER | VALUE                                                                              | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                        |
|-----------|------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| operation | startrecording,<br>stoprecording,<br>play,<br>stopplayback,<br>remove,<br>download | " <b>startrecording</b> " = Record a new audio clip.<br>" <b>stoprecording</b> " = Stop an ongoing recording.<br>" <b>play</b> " = Play an audio clip.<br>" <b>stopplayback</b> " = Stop to playback of an audio clip.<br>" <b>remove</b> " = Delete a clip.<br>" <b>download</b> " = Download a clip to the client.<br>* Recording time is limited to 60 seconds. |
| name      | <string>                                                                           | Name of the audio clip.<br>The audio clip the action applies to. We support two interfaces (name or index) to specify the media clip to be played.                                                                                                                                                                                                                 |
| index     | 0, 1                                                                               | Number of the audio clip.<br>The audio clip the action applies to. We support two interfaces (name or index) to specify the media clip to be played.                                                                                                                                                                                                               |

**Syntax:** (**for control API**)

Add a new audio clip by uploading a file:

\* File size is limited to 10MB.

\* Support .wav format only

[http://<servername>/cgi-bin/admin/upload\\_audioclip.cgi\[&clipname=<value>\]\[&clipindex=<value>\]](http://<servername>/cgi-bin/admin/upload_audioclip.cgi[&clipname=<value>][&clipindex=<value>])

| PARAMETER | VALUE | DESCRIPTION |
|-----------|-------|-------------|
|-----------|-------|-------------|

|           |          |                           |
|-----------|----------|---------------------------|
| clipname  | <string> | Name of the audio clip.   |
| clipindex | 0, 1     | Number of the audio clip. |

## 8.38 Format SD card

**Note:** This request requires Administrator privileges.

**Method:** GET/POST

Syntax: **(for control API)**

```
http://<servername>/cgi-bin/admin/format_sdcard.cgi?operation=set[&<parameter>=<value>]
```

If the user requests a size larger than all stream settings on the server, this request will fail.

If the user requests include an invalid parameter value, we will use the default value.

| PARAMETER    | VALUE       | DESCRIPTION                                                                                                                                 |
|--------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| operation    | Set         | Set formatting parameters and start formatting                                                                                              |
| fstype       | fat32, ext4 | <b>fat32:</b> High compatibility for PC, but low stability for Data<br><b>ext4 :</b> Low compatibility for PC, but high stability for Data. |
| fullformat   | 0, 1        | <b>1:</b> Completely clean data (fat32 support only)                                                                                        |
| blockingmode | blocking    | <b>blocking:</b> Send an HTTP response at the end of the format.<br><b>nonblocking:</b> Send an HTTP response at the start of the format    |
| index        | 0~N         | which one SD card                                                                                                                           |

### Example:

#### Request of format SD card:

```
http://myserver/cgi-bin/admin/format_sdcard.cgi?operation=set&fstype=ext4
```

#### Response of success:

```
HTTP/1.1 200 OK\r\n
```

```
Content-Type: text/plain\r\n
```

```
Content-Length: 2\r\n
```

```
\r\n
```

```
ok
```

**Response of formatting fail:**

```
HTTP/1.1 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <Error Message Length>\r\n
\r\n
<Error Message>
```

**Syntax: (for query API)**

```
http://<servername>/cgi-bin/admin/format_sdcard.cgi?operation=get
```

| PARAMETER | VALUE | DESCRIPTION                                                                                                 |
|-----------|-------|-------------------------------------------------------------------------------------------------------------|
| Get       |       | Get formatting progress(0~100) or result(error message)<br>*It is unnecessary when using the blocking mode. |

**Example:****Request of get formatting progress(0~100):**

```
http://myserver/cgi-bin/admin/format_sdcard.cgi?operation=get
```

**Response of success:**

```
HTTP/1.1 200 OK\r\n
Content-Type: text/plain\r\n
Content-Length: <Success Message Length>\r\n
\r\n
<Success Message>
```

**List of success message:**

0~100 and 100 represents formatting completed

**List of error message:**

```
ERROR: You cannot format an SD card repeatedly
ERROR: Format SD failed, but removed all contents success
ERROR: Format SD failed, and failed to remove all contents
ERROR: Please insert SD card
ERROR: Please use ext file system
ERROR: File system type is not supported
```

ERROR: The device does not exist or is busy

ERROR: Formatted successfully, but cannot create database

## 8.39 Methods for Accessing Streaming

### 8.39.1 Get Stream URI (**capability\_media\_streamprofiles\_support = 1**)

**Note:** This request requires Viewer access privileges.

Syntax:

For RTSP, the user needs to input the URL below into a RTSP compatible player.

```
rtsp://<servername>:<port>/media2/stream.sdp?profile=<streamprofile_i<0~(n-1)>_token>[&<parameter>=<value>]
```

- “n” is the maximum stream profile number (capability\_media\_streamprofiles\_num)
- “streamprofile\_i<x>\_token” is the unique identifier for each profile, x is within 0~(capability\_media\_streamprofiles\_num)-1.
- port is the rtsp port.

Please refer to the streamprofile group for requesting the stream profile token value for each profile.

| PARAMETER | VALUE | DESCRIPTION                                                                                                                                                                                                 |
|-----------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pimssm    | 1     | <b>1:</b> Enable the feature of Protocol Independent Multicast - Source Specific Multicast.<br>* This field is only required when using PIM-SSM feature.<br>* Only valid when network_rtsp_pimssm_enable=1. |

Example:

Request the streaming of streamprofile\_i0\_token=profile200,  
 rtsp://192.168.1.1:554/media2/stream.sdp?profile=profile200

**Note:**

If the requested certain profile streamprofile\_i<x>\_occupied=0, which indicates stream profile <x> has not been created, the above method for requesting RTSP streaming will fail.

### 8.39.2 Get SDP for always multicast

(**capability\_media\_streamprofiles\_support = 1**)

**Note:** This request requires Viewer access privileges.

**Method:** GET/POST

Syntax:

```
http://<servername>:<port>/media2/<streamprofile_i<0~(n-1)>_profilename>.sdp?[<parameter>=<value>]
```

- “n” is the maximum stream profile number (capability\_media\_streamprofiles\_num)
- “streamprofile\_i<x>\_profilename” is a friendly name for certain profile, x is within 0~(capability\_media\_streamprofiles\_num)-1.
- port is the http port.

Please refer to the streamprofile group for requesting the stream profile name value for each profile.

You can get the SDP by HTTP GET.

When using scalable multicast, Get SDP file which contains the multicast information via HTTP.

| PARAMETER | VALUE | DESCRIPTION                                                                                                                                                                                                 |
|-----------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pimssm    | 1     | <b>1:</b> Enable the feature of Protocol Independent Multicast - Source Specific Multicast.<br>* This field is only required when using PIM-SSM feature.<br>* Only valid when network_rtsp_pimssm_enable=1. |

**Note:**

1. This method is only valid when always multicast is enabled, i.e. streamprofile\_i<x>\_alwaysmulticast=1.
2. If the requested certain streamprofile\_i<x>\_profilename is empty, which indicates stream profile <x> doesn't have a valid SDP file, the above method of requesting SDP file will fail.
3. If there existed two or more streamprofile\_i<x>\_profilename which have the same value, the requested SDP file will be overwrite by the last request.

## 8.40 Accessing SFTP server and client

### 8.40.1 SFTP server setting for event action

\* Only available when bit 1 of "capability\_protocol\_ftp\_client" is 1.

Syntax: **(for control API)**

[http://<servername>/cgi-bin/admin/sftpclient.cgi?operation=<value>\[&parameter=<value>\]](http://<servername>/cgi-bin/admin/sftpclient.cgi?operation=<value>[&parameter=<value>])

| PARAMETER           | VALUE                             | DESCRIPTION                                                                                                                                                                                                                                                                                                                    |
|---------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| operation           | automode, manualmode              | <p><b>"automode"</b>: Key pair will be generated, and automatically copy public key to server.</p> <p><b>"manualmode"</b>: Key should be downloaded or uploaded by user.</p> <p>* This field is required.</p>                                                                                                                  |

## Electromagnetic Compatibility (EMC)

### FCC Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions.

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a partial installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interface cables must be used in order to comply with emission limits.

### CE Mark Warning

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

### VCCI Warning

この装置は、情報処理装置等電波障害自主規制協議会（V C C I）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。

取扱説明書に従って正しい取り扱いをして下さい
